Fish Count Crossing Geographic Boundaries

The Great Annual Fish Count celebrated its 10th year with great success! The 2002 GARC included over 90 seminars and 300 scheduled dive events throughout REEF's survey regions. With increased international interest over the past few years, REEF changed the name of the Great American Fish Count to the Great Annual Fish Count and events took place throughout the US, British Columbia, Ontario, Cozumel, Gulf of California, Jamaica, Belize, Honduras, Bermuda, Bonaire, Bahamas, Turks and Caicos, and the Cayman Islands. The year's Fish Count truly grew into an international event with the Living Oceans Society emerging as an international leader as volunteers in British Columbia participated in 12 seminars and 33 scheduled dives.

Project in British Columbia, helped to involve new divers and reinvigorated previously trained volunteers," said Dana Haggerty, Living REEF Project Coordinator. "Our involvement in the GARC has also strengthened the partnership between Living Oceans Society and REEF."

Events to celebrate the GARC 10 year milestone included a digital photo contest with NOAA's National Marine Sanctuaries, a kick-off event with the Channel Islands National Marine Sanctuary, a 10-year anniversary celebration with the Solowagon Bank National Marine Sanctuary, and a closing event in Key West, Florida with the Florida Keys Community College Scuba Club and Artificial Reefs of the Keys (ARK).

To honor the founder of the Great American Fish Count, Dr. Gary Davis, the kick-off event took place in Santa Barbara, CA with the Channel Islands National Marine Sanctuary. Ten years ago, the Great American Fish Count was only an idea by Channel Islands Park biologist Dr. Gary Davis. It became a reality when he

Oceans under Glass Samantha Muka,2022-12-08 A welcome dive into the world of aquarium craft that offers much needed knowledge about undersea environments Atlantic coral is rapidly disappearing in the wild To save the species they will have to be reproduced quickly in captivity and so for the last decade conservationists have been at work trying to preserve their lingering numbers and figure out how to rebuild once thriving coral reefs from a few survivors Captive environments built in dedicated aquariums offer some hope for these corals This book examines these specialized tanks charting the development of tank craft throughout the twentieth century to better understand how aquarium modeling has enhanced our knowledge of the marine environment Aquariums are essential to the way we understand the ocean Used to investigate an array of scientific questions from animal behavior to cancer research and climate change they are a crucial factor in the fight to mitigate the climate disaster already threatening our seas To understand the historical development of this scientific tool and the groups that have contributed to our knowledge about the ocean Samantha Muka takes up specialty systems including photographic aquariums kriesel tanks for jellyfish and hatching systems to examine the creation of ocean simulations and their effect on our interactions with underwater life Lively and engaging *Oceans under Glass* offers a fresh history about how the aquarium has been used in modern marine biology and how integral it is to knowing the marine world

Marine Biodiversity of Costa Rica, Central America Ingo S. Wehrtmann,Jorge Cortés,2008-12-28 Life began in the sea and even today most of the deep diversity of the planet is marine This is often forgotten especially in tropical countries like Costa Rica renowned for their rain forests and the multitude of life forms found therein Thus this book focusing on marine diversity of Costa Rica is particularly welcome How many marine species are there in Costa Rica The authors report a total of 6 777 species or 3 5% of the world s total Yet the vast majority of marine species have yet to be formally described Recent estimates of the numbers of species on coral reefs range from 1 9 million so that the true number of marine species in Costa Rica is certainly far higher In some groups the numbers are likely to be vastly higher because to date they have been so little studied Only one species of nematode is reported despite the fact that it has been said that nematodes are

the most diverse of all marine groups In better studied groups such as mollusks and crustaceans reported numbers are in the thousands but even in these groups many species remain to be described Indeed the task of describing marine species is daunting if there really are about 9 million marine species and Costa Rica has 3.5% of them then the total number would be over 300 000 Clearly so much remains to be done that new approaches are needed Genetic methods have enormous promise in this regard

Interrelationships Between Corals and Fisheries Stephen A. Bortone, Ph.D.,2014-07-17 Interrelationships Between Corals and Fisheries is derived from a workshop held by the Gulf of Mexico Fishery Management Council in Tampa Florida in May 2013 where world authorities came together to discuss the current problems in managing tropical fisheries and offered suggestions for future directions for both researchers and environmental resource managers This book addresses current and emerging threats as well as challenges and opportunities for managing corals and associated fisheries It provides an information baseline toward a better understanding of how corals and the consequences of coral condition influence fish populations especially as they relate to management of those populations The book contains content from presentations modified as a result of interactions and discussions with colleagues and peer reviews by global experts in corals and fisheries Many chapters include additional materials not presented in the workshop There are also papers that were not presented at the workshop but contribute to the central theme of the book Topics covered include Global decline in coral reefs and impacts on fishery yields Distribution and diversity in the Gulf of Mexico Implementation of Coral Habitat Areas of Particular Concern CHAPCs Deepwater coral sponge habitats Coral populations on offshore platforms Mangrove connectivity for sustaining coral reef fisheries Restoring deepwater coral ecosystems and fisheries after the Deepwater Horizon oil spill Predictive mapping of coral reef fish Covering a range of subject matter most of the chapters offer suggestions for future research on the interrelationships between corals and fisheries In addition the final chapter presents a summary on these interrelationships and discusses managing them for the future

conservation at the time Lowe recounts the efforts of Indonesian biologists to document the species of the Togean Islands to develop Togean people and to turn this archipelago off the coast of Sulawesi into a national park Indonesian scientists aspired to a conservation biology that was both internationally recognizable and politically effective in the Indonesian context Simultaneously Lowe describes the experiences of Togean Sama people who had their own understandings of nature and nation To place Sama and scientist into the same conceptual frame Lowe studies Sama ideas in the context of transnational thought rather than local knowledge In tracking the practice of conservation biology in a postcolonial setting Wild Profusion explores what in nature can count as important and for whom
