Reflex Epilepsies for the Practicing Clinician Charuta N. Joshi, Renzo Guerrini, 2025-03-17

Most patients diagnosed with reflex epilepsies experience seizures induced by light stimuli or by sudden unexpected noises. In some patients, however, seizures may also be triggered by more complex precipitants such as reading, emotion, or certain movements or activities. The neurophysiological bases and clinical manifestations associated with these conditions are variable and must be distinguished from those related to other commonly observed seizure precipitating factors such as sleep deprivation, alcohol intake, or menstrual cycles, whose relationship with the onset of seizures is not directly linked to the specific mechanisms of seizure genesis operating in reflex epilepsies. *Reflex Epilepsies for the Practicing Clinician* brings together international experts in the field of reflex epilepsies to share their experiences and knowledge. This book explores the rapidly changing genetic scene, characteristic investigations, findings, and appropriate treatments for reflex epilepsies. Focusing on clinical symptoms and signs, diagnostic criteria, investigations, and best therapies available at the present time for these niche epilepsy diagnoses, it highlights the latest findings on the most appropriate work up of patients with reflex seizures and epilepsies. **A Clinical Guide to Epileptic Syndromes and their Treatment** C.
