**Regeneration: Stem Cells and Beyond** Ellen Heber-Katz,2003-09-16 In this issue of Current Topics in Microbiology and Immunology the authors present a unique range of examples of the regenerative response and the role of stem cells from the amphibian to human It seems that all roads lead to cells that have the plasticity to become something else not only in the amphibian but also in the mammal

**Heart Regeneration** Felix B. Engel,2012 This title presents the major advances of the last decade in the field of cardiac regeneration

Heart Regeneration: Stem Cells And Beyond Felix B Engel,2012-03-22 Injured mammalian hearts do not regenerate but scar This is a major medical

problem as ischemic heart disease is among the leading causes of morbidity and mortality worldwide Essential clues for human heart repair are uncovered when zebrafish and newt are found to regenerate cardiac muscle after injury This book presents the major advances of the last decade in the field of cardiac regeneration These recent advances include demonstration that zebrafish a genetically tractable system can regenerate heart the identification of several new stem cell populations in the heart demonstration that stem cells can be used to improve heart function and demonstration that induction of cardiomyocyte proliferation is a realistic future option to repair injured hearts This book also provides detailed reviews of the research on model organisms capable of heart regeneration as well as innovative translational research to achieve regeneration in mammals that comprises work on blood born stem cells endogenous cardiac stem cells paracrine factors reawakening of cardiomyocyte proliferation and bioengineering More importantly the book in the concluding chapter dovetails the studies with a comprehensive overview of clinical trials

*Biology of Negative Strand RNA Viruses: The Power of Reverse Genetics* Yoshihiro Kawaoka,2004-05-07 Negative strand RNA viruses so named because of the polarity of their genomic RNA to mRNA include important human and non human pathogens This volume covers major advances in reverse genetics techniques over the past decade state of the art basic science and the clinical implications of experimental findings This should rekindle interest in negative strand RNA viruses among readers including those in other disciplines leading to further progress in understanding these important viruses and in developing effective measures of control

**Glaucoma: A Neurodegenerative Disease of the Retina and Beyond Part B** Giacinto Bagetta,Carlo Nucci,2020-09-26 Glaucoma A Neurodegenerative Disease of the Retina and Beyond Part B Volume 257 the latest release in the Progress in Brain Research series highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors Topics covered in this new release include Glaucoma neurodegeneration and myopia Links between obstructive sleep apnea and glaucoma neurodegeneration Artificial intelligence and deep learning in glaucoma Current state

and future prospects Brain networks reorganization and functional disability in glaucoma Advanced vascular examinations of the retina and optic nerve head in glaucoma and much more Covers all key aspects of current research on glaucoma Provides extensively referenced chapters giving readers a comprehensive list of resources on topics covered Includes comprehensive and in depth background information written in a clear form that is accessible to both specialists and non specialists

**Regenerative Strategies in the Spinal Cord** Michelle Ariana Wedemeyer, 2012 Populations of cells were obtained from a clinic offering treatments for chronic spinal cord injury Immunostaining and flow cytometry confirmed the populations to be neural and mesenchymal stem cells respectively NSCs and MSCs ELISAs performed on conditioned media detected several growth factors although neurotrophic factors known to promote regeneration in the spinal cord were not detected Treatment of primary cortical neurons with media conditioned by MSCs and NSCs did not lead to a statistically significant increase in axon length or complexity A statistically significant increase in cell number was detected in cultures treated with NSC conditioned media In vitro analysis does not support the clinic's claim that the cells exhibit properties which would promote axon growth Two human embryonic stem cell lines ES and three induced pluripotent stem cell lines iPS were differentiated into high purity populations of neuronal progenitor cells NPCs and oligodendrocyte progenitor cells OPCs Both ES and two of three iPS lines produced high purity populations of the desired lineage Transplantation of OPCs generated from ES and iPS lines into spinal cord injured rats resulted in engraftment of human oligodendrocytes without formation of tumors We conclude that iPS cells may be adapted to protocols developed for generation of high purity NPCs and OPCs from ES cells Immature astrocytes are known to promote recovery from spinal cord injury In order to determine properties of immature astrocytes which promote recovery after spinal cord injury an in vitro model of aged astrocytes was developed As compared to aged astrocytes a greater proportion of immature astrocytes are proliferating express more laminin are motile and promote greater regeneration of dorsal root ganglion DRG axons Reprogramming mature astrocytes into immature astrocytes is a potential therapy for chronic spinal cord injury Nine factors which are expressed at higher levels in immature versus mature astrocytes were overexpressed in aged astrocytes At two weeks treated cultures exhibited greater laminin immunofluorescence increased capacity to promote growth of adult DRG axons and foci of increased motility mixed with foci of cell death Treatment of aged astrocytes with 9 factors leads to partial recovery of immature properties **Bone**

**Morphogenetic Proteins: Regeneration of Bone and Beyond** Slobodan Vukicevic, Kuber T. Sampath, 2004-08-20 Since the discovery of the bone morphogenetic proteins BMPs more than 15 years ago there has been an unpredicted explosion of both basic scientific discoveries and clinical reports on their use from institutions all over the world The potent efficacy of BMPs in almost all crucial developmental events as well as during regeneration of various organs such as bone kidney brain liver heart etc has positioned BMPs at the center of scientific interest Many of these aspects are covered in this new PIR volume Their role in development biology signal transduction kidney regeneration CNS functions craniofacial skeleton

reconstruction joint and cartilage repair long bone non unions and acute fractures and spinal fusion is reviewed by experts in the field For the first time the role of BMPs in carcinogenesis has been reviewed to provide a rationale for applying their biology in patients with bone tumors The optimism resulting from safe and successful treatment with BMPs for various skeletal malformations of more than 10 000 patients worldwide has opened new avenues for exploring other indications for their use The next big challenge for bringing BMPs to the benefit of mankind is in regenerating articular cartilage defects and rescuing patients with acute and chronic renal failure The volume editors thank all authors for the rapid preparation of their chapters in order that the book remains up to date for readers with specific interest in the field of regenerative medicine The important contribution of Mrs Morana and Mr

**Myc as a Disease Target Beyond Cancer** Jonathan R. Whitfield, Mariano F. Zacarias-Fluck, John Sedivy, Yulia A. Nevzorova, 2024-09-02 Myc is a pleiotropic transcription factor fundamental for many cellular processes It is an infamous and highly studied oncogene with around 10 000 articles published in the last decade The majority of these link it to cancer The focus on Myc as a hot target in cancer has led to immense efforts from academia through to pharmaceutical companies being directed towards finding a Myc inhibitor Not surprisingly given its fundamental nature in many physiological processes Myc has also been linked to a large variety of pathologies other than cancer The growing efforts to develop Myc inhibitors as cancer therapies will have important implications for the treatment of these diseases too whether they have a clearly demonstrated aetiology linked with Myc or so far are only at early stages of association with it Interestingly the activation of Myc may also prove helpful in the field of regenerative medicine and reversal of ageing The aim of this Research Topic is therefore to describe non oncological pathologies and conditions to which Myc modulation could be applied These will include conditions that have strong links to Myc and where Myc modulation has already been modelled as well as conditions that so far have more limited data linking them to Myc but where it seems to have a key role Authors will be expected to briefly review the particular disease and what is known to link Myc to it plus the possibility of any clinical trials in the near future

Adult Neurogenesis: Beyond Rats and Mice Luca Bonfanti, Irmgard Amrein, 2019-02-11 Researchers working on adult neurogenesis have focused largely on inbred laboratory rodents While this provides a strong advantage of restricting genetic variation in the group it also narrows our perspective on adult neurogenesis as a biological phenomenon Many unsolved issues and open questions cannot be resolved without the contribution of comparative studies spanning through widely different species how did adult neurogenesis evolve what is the link between adult neurogenesis and brain complexity how do adult neurogenesis and animal behavior influence each other how does adult neurogenesis contribute to brain plasticity cognition and possibly repair and how do experimental conditions affect adult neurogenesis The main message from the comparative approach to adult neurogenesis is that the relative exclusive focus on laboratory rodents can result in a bias on how we think about this biological process
