Tiger Bone & Rhino Horn Richard Ellis, 2013-02-22 In parts of Korea and China moon bears black but for the crescent shaped patch of white on their chests are captured in the wild and brought to bear farms where they are imprisoned in squeeze cages and a steel catheter is inserted into their gall bladders The dripping bile is collected as a cure for ailments ranging from an upset stomach to skin burns The bear may live as long as fifteen years in this

state Rhinos are being illegally poached for their horns as are tigers for their bones thought to improve virility Booming economies and growing wealth in parts of Asia are increasing demand for these precious medicinals Already endangered species are being sacrificed for temporary treatments for nausea and erectile dysfunction Richard Ellis one of the world's foremost experts in wildlife extinction brings his alarm to the pages of Tiger Bone Rhino Horn in the hope that through an exposure of this drug trade something can be done to save the animals most direly threatened Trade in animal parts for traditional Chinese medicine is a leading cause of species endangerment in Asia and poaching is increasing at an alarming rate Most of traditional Chinese medicine relies on herbs and other plants and is not a cause for concern Ellis illuminates those aspects of traditional medicine but as wildlife habitats are shrinking for the hunted large species the situation is becoming ever more critical One hundred years ago there were probably 100 000 tigers in India South China Sumatra Bali Java and the Russian Far East The South Chinese Caspian Balinese and Javan species are extinct There are now fewer than 5 000 tigers in all of India and the numbers are dropping fast There are five species of rhinoceros three in Asia and two in Africa and all have been hunted to near extinction so their horns can be ground into powder not for aphrodisiacs as commonly thought but for ailments ranging from arthritis to depression In 1930 there were 80 000 black rhinos in Africa Now there are fewer than 2 500 Tigers bears and rhinos are not the only animals pursued for the sake of alleviating human ills the list includes musk deer sharks saiga antelope seahorses porcupines monkeys beavers and sea lions but the dwindling numbers of those rare species call us to attention Ellis tells us what has been done successfully and contemplates what can and must be done to save these animals or sadly our children will witness the extinction of tigers rhinos and moon bears in their lifetime

biologists **Shifting Ground** Mahesh Rangarajan, K. Sivaramakrishnan, 2014-11-06 Environmental history of India has developed as an important field of inquiry in the last twenty five years While providing major insights the existing scholarship has primarily focused on drawing sharp lines of distinction those between geographical spaces forest rivers farms people herders farmers townspeople eras colonial post colonial and so on The limitations of these sharp divides are brought to the forefront when there is a critical engagement with the region's contested environmental past *Shifting Ground* brings together an array of essays that pose critical questions regarding India's environmental past and the way it has been approached by scholars From debunking the idea of a primeval pristine forest cover to analysing the dynamics that shape human animal relations to examining the conflicts created by post Independence projects of rural development and conservation this volume touches upon the various aspects of environmental studies and juxtaposes them with social history history of science and technology and history of trade and culture Drawing on original case studies the book not only explores the past but also portrays how its traditions are often invoked to be deployed in contemporary conflicts those that are often aggravated by the pressures on natural assets created by the recent prosperity and the vaulting aspirations of a rapidly expanding Indian middle class **Reframing the Environment** Manisha Rao, 2020-09-23 This volume unravels the underlying power relations that are masked in the present discourse of ecological sustainability and conflicts over natural resources Current discussions on environment emphasise the use and abuse of the environment in various ways This book looks at the inter linkages of discourse resources risk and resistance in the contemporary neoliberal world While exploring the experiences of neoliberalisation of nature in India it brings out the intersections of conservation and management science and gender community politics and governance policies The volume highlights the cultural politics of resistance from multiple sites and regions in India in the recent context be it land water forest flora or fauna or urban commons It discusses the ways in which environmental issues have come up and been appropriated while examining the role of the State and actors such as corporates traders consultants ecotourism companies green activists and consumers and consequences of green appropriation and the growth story The major themes of the volume are the interrelations of nature culture and power neoliberal governance and the environment access to and use and management of land natural resources and environment community politics and livelihoods marginalised groups and local communities marketisation and the environment and new forms of re appropriation and resistance This book will be of great interest to students and researchers in sociology environmental studies environmental history environmental anthropology political ecology political science geography law and human rights economics and development studies as well as to environmental activists policy makers and those in media and journalism *Wired Wilderness* Etienne Benson, 2010-12-01 American wildlife biologists first began fitting animals with radio transmitters in the 1950s By the 1980s the practice had proven so useful to scientists and nonscientists alike that it became global *Wired Wilderness* is the first book length study of the origin evolution use and impact of these now

commonplace tracking technologies Combining approaches from environmental history the history of science and technology animal studies and the cultural and political history of the United States Etienne Benson traces the radio tracking of wild animals across a wide range of institutions regions and species and in a variety of contexts He explains how hunters animal rights activists and other conservation minded groups gradually turned tagging from a tool for control into a conduit for connection with wildlife Drawing on extensive archival research interviews with wildlife biologists and engineers and in depth case studies of specific conservation issues such as the management of deer grouse and other game animals in the upper Midwest and the conservation of tigers and rhinoceroses in Nepal Benson illuminates telemetry s context dependent uses and meanings as well as commonalities among tagging practices Wired Wilderness traces the evolution of the modern wildlife biologist s field practices and shows how the intense interest of nonscientists at once constrained and benefited the field Scholars of and researchers involved in wildlife management will find this history both fascinating and revealing

Foundations of Environmental Sustainability Larry Rockwood, Ronald Stewart, Thomas Dietz, 2008-06-04 This book reviews and analyzes the period roughly from the 1950s to the present when the environment became an issue as important as economic growth or war and peace to assess the current situation and begin planning for the challenges that lie ahead Most people are aware of both the environmental destruction taking place around the world and of the specter of climate change The devastation of New Orleans by hurricane Katrina illustrates the potential for disaster when climate change is combined with the mismanaged environmental policy How did we get to this point What has been done and what can be done to avoid future environmental disasters Thirty two contributing chapter authors among them one of the principal drafters of the National Environmental Policy Act Chief of the African Environment Division and the World Bank Vice President of the Center for Conservation Innovation at the World Wildlife Fund President of the Zoological Society of London former President of the Ecological Society of America use their unique authoritative perspective to review the evolution of environmental science and policy in the past half century Each author describes the evolution of environmental science and policy in the past half century and consider the challenges of the future Although the authors of this book come from various fields they have followed paths that have generally converged on the concept of sustainability This book attempts to define what sustainability is how we can achieve it and what the prospects for sustainability in the future are *Rhinoceros* Kelly Enright, 2008-06-24 The rhinoceros s horn and massive leathery frame belie its docile and solitary nature causing the animal to be consistently perceived by humans as a monster to be feared Kelly Enright now deftly sifts fact from fiction in *Rhinoceros* Enright chronicles the vexed interactions between humans and rhinos from early sightings that mistook the rhinoceros for the mythical unicorn to the eighteenth century display of the rhinoceros in Europe as a wonder of nature and its introduction to the American public in 1830 The rhinoceros has long been a prized hunting object as well whether for its horn as a valuable ingredient in Asian medicine or as a coveted trophy by nineteenth century big game hunters such as

Theodore Roosevelt and the book explains how such practices have led to the rhino's status as an endangered species. Enright also considers portrayals of the animal in film literature and art all in the service of discovering whether the reputed savagery of the rhino is a reality or a legacy of its mythic past. A wide-ranging highly illustrated study. Rhinoceros will be essential for scholars and animal lovers alike. *Soul of the Rhino* Hemanta Mishra, 2009-09-01 This new release is a spirited yet humble account of one man's scientific career and personal journey to save the endangered rhinoceros in his native Nepal. Wildlife Politics Bruce Rocheleau, 2017-03-30 Attitudes towards charismatic animals such as tigers, lions, bears, and wolves vary greatly and change over time, resulting in bitter political debates. This comprehensive book identifies and analyses the factors that influence policies across the globe, highlighting how this impacts conservation as a whole. Issues such as overexploitation, hunting, ecotourism, and the struggle to prevent illegal wildlife trafficking are examined, and science's role in policymaking is assessed. The conflicting forces behind legislation, including institutions, interest groups, and the media, are analysed with particular focus on the significance of the Endangered Species Act, covering over forty-five species that have become matters of political debate in sixty-seven different countries. Case studies and conceptual frameworks provide a clear understanding of the key topics, shedding light on this important yet often overlooked area of environmental politics. *At Nature's Edge* Gunnel Cederlöf, Mahesh Rangarajan, 2018-09-18 In an epoch when environmental issues make the headlines, this is a work that goes beyond the everyday. Ecologies as diverse as the Himalayas and the Indian Ocean coast, the Negev desert, and the former military bases of Vietnam or the Namib desert and the east African savannah all have in common a long-time human presence and the many ways people have modified nature. With research covering countries from Asia, Africa, and Australia, the authors come together to ask how and why human impacts on nature have grown in scale and pace from a long pre-history. The chapters in this volume illumine specific patterns and responses across time, going beyond an overt centring of the European experience. The tapestry of life and the human reshaping of environments evoke both concern and hope, making it vital to understand when, why, and how we came to this particular turn in the road. Eschewing easy labels and questioning eurocentrism in today's climate vocabulary, this is a volume that will stimulate rethinking among scholars and citizens alike. *Field Days* A. J. T. Johnsingh, 2006

Our Wild Calling Richard Louv, 2020-11-10 A book that offers hope. The New York Times Book Review. A wondrous tapestry. Carl Safina, author of *Beyond Words: What Animals Think and Feel*, Audubon Medal winner. Richard Louv's landmark book *Last Child in the Woods* inspired an international movement to connect children and nature. Now he redefines the future of human-animal coexistence. In *Our Wild Calling*, Louv interviews researchers, theologians, wildlife experts, indigenous healers, psychologists, and others to show how people are connecting with animals in ancient and new ways and how this serves as an antidote to the growing epidemic of human loneliness: how dogs can teach children ethical behavior, how animal-assisted therapy may yet transform the mental health field, and what role the human-animal relationship plays in our spiritual health. He reports on

wildlife relocation and on how the growing populations of wild species in urban areas are blurring the lines between domestic and wild animals Our Wild Calling makes the case for protecting promoting and creating a sustainable and shared habitat for all creatures not out of fear but out of love Includes a new interview with the author discussion questions and a resource guide

Neotropical forests sustain a wealth of biodiversity provide a wide range of ecosystem services and products and support the livelihoods of millions of people But is forest management a viable conservation strategy in the tropics Supporters of sustainable forest management have promoted it as a solution to problems of both biodiversity protection and economic stagnation Detractors insist that any conservation strategy short of fully protected status is a waste of resources and that forest management actually hastens deforestation By focusing on a set of critical issues and case studies this book explores the territory between these positions highlighting the major factors that contribute to or detract from the chances of achieving forest conservation through sustainable management
