Revealing The Universe The Making Of The Chandra X Ray Observatory:

Revealing the Universe Wallace H. Tucker, Karen Tucker, 2001 Revealing the Universe tells the story of the Chandra X ray Observatory BOOK JACKET The Restless Universe Eric Matthew Schlegel, 2002 Carl Sagan once noted that there is only one generation that gets to see things for the first time We are in the midst of such a time right now standing on the threshold of discovery in the young and remarkable field of X ray astronomy In The Restless Universe astronomer Eric Schlegel offers readers an informative survey of this cutting edge science Two major space observatories launched in the last few years NASA's Chandra and the European Newton are now orbiting the Earth sending back a gold mine of data on the X ray universe Schlegel who has worked on the Chandra project for seven years describes the building and launching of this space based X ray observatory But the book goes far beyond the story of Chandra What Schlegel provides here is the background a nonscientist would need to grasp the present and follow the future of X ray astronomy He looks at the relatively brief history of the field the hardware used to detect X rays the satellites past present and future that have been or will be flown to collect the data the way astronomers interpret this data and perhaps most important the insights we have already learned as well as speculations about what we may soon discover And throughout the book Schlegel conveys the excitement of looking at the universe from the perspective brought by these new observatories and the sharper view they deliver Drawing on observations obtained from Chandra Newton and previous X ray observatories The Restless Universe gives a first look at an exciting field which significantly enriches our understanding of the universe Chandra's Cosmos Wallace H. Tucker, 2017-03-28 On July 23 1999 the Chandra X Ray Observatory the most powerful X ray telescope ever built was launched aboard the space shuttle Columbia Since then Chandra has given us a view of the universe that is largely hidden from telescopes sensitive only to visible light In Chandra's Cosmos the Smithsonian Astrophysical Observatory's Chandra science spokesperson Wallace H Tucker uses a series of short connected stories to describe the telescope's exploration of the hot high energy face of the universe The book is organized in three parts The Big covering the cosmic web dark energy dark matter and massive clusters of galaxies The Bad exploring neutron stars stellar black holes and supermassive black holes and The Beautiful discussing stars exoplanets and life Chandra has imaged the spectacular glowing remains of exploded stars and taken spectra showing the dispersal of their elements Chandra has observed the region around the supermassive black hole in the center of our Milky Way and traced the separation of dark matter from normal matter in the collision of galaxies contributing to both dark matter and dark energy studies Tucker explores the implications of these observations in an entertaining informative narrative aimed at space buffs and general readers alike NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over

the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA s first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate

In Search of the True Universe Martin Harwit,2013-11-18 This book examines how our understanding of the cosmos advanced rapidly during the twentieth century and identifies factors contributing to this progress State of the Universe 2008 Martin A. Ratcliffe,2008-02-01 The State of the Universe annuals provide an annual astronomy review suitable for the popular science level reader The 2008 annual covers the year s astronomical news on topics beyond the Solar System placing them in the context of the longer term goals of astronomers and astrophysicists around the world The book also includes web links for all major news stories providing a bridge between the public news stories and the actual research web sites

The Last of the Great Observatories George H. Rieke,2021-11-09 The Spitzer Space Observatory originally known as the Space Infrared Telescope Facility SIRTf is the last of the four Great Observatories which also include the Hubble Space Telescope the Chandra X ray Observatory and the Compton Gamma Ray Observatory Developed over twenty years and dubbed the Infrared Hubble Spitzer was launched in the summer of 2003 and has since contributed significantly to our understanding of the universe George Rieke played a key role in Spitzer and now relates the story of how that observatory was built and launched into space Telling the story of this single mission within the context of NASA space science over two turbulent decades he describes how after a tortuous political trail to approval Spitzer was started at the peak of NASA s experiment with streamlining and downsizing its mission development process termed faster better cheaper Up to its official start and even afterward Spitzer was significant not merely in terms of its scientific value but because it stood at the center of major changes in space science policy and politics Through interviews with many of the project participants Rieke reconstructs the political and managerial process by which space missions are conceived approved and developed He reveals that by the time Spitzer had been completed a number of mission failures had undermined faith in faster better cheaper and a more conservative approach was imposed Rieke examines in detail the premises behind faster

better cheaper their strengths and weaknesses and their ultimate impact within the context of NASA's continuing search for the best way to build future missions Rieke's participant's perspective takes readers inside Congress and NASA to trace the progress of missions prior to the excitement of the launch revealing the enormously complex and often disheartening political process that needs to be negotiated He also shares some of the new observations and discoveries made by Spitzer in just its first year of operation As the only book devoted to the Spitzer mission *The Last of the Great Observatories* is a story at the nexus of politics and science shedding new light on both spheres as it contemplates the future of mankind's exploration of the universe

Reinventing NASA Roger Handberg, 2003-12-30 From its beginnings NASA was convinced that its real mission was to create the opportunity for a much different and better society on Earth namely through human space flight Pursuit of such a goal has led the agency to persist in certain activities even when they conflict with the wishes of Congress and the President Recent changes in the international environment changes that began well before September 11 2001 have brought the military back into the field of human space flight a situation that holds certain hazards for NASA since the military is more powerful politically Dramatic changes could be in store changes that could severely damage NASA's capacity for continuing what it sees as its primary objective While most analyses see the agency as riddled with incompetence Handberg argues that NASA's troubles are a product of its internal values He begins with an historical overview of the major themes in NASA's history followed by chapters on specific areas of concentration such as the space station space transportation space science and internal reforms He also discusses the long term future of the agency and human space flight in general both domestically and internationally

The New Astronomy: Opening the Electromagnetic Window and Expanding our View of Planet Earth Wayne Orchiston, 2005-10-18 This is an unusual book combining as it does papers on astrobiology history of astronomy and sundials but after all Woody Sullivan is an unusual man In late 2003 I spent two fruitful and enjoyable months in the Astronomy Department at the University of Washington UW working on archival material accumulated over the decades by

Woody for a book we will co author with Jessica Chapman on the early development of Australian astronomy The only serious intellectual distraction I faced during this period was planning for an IAU colloquium on transits of Venus scheduled for June 2004 in England where I was down to present the Cook paper I knew Woody was also interested in transits and indeed anything remotely connected with shadows see his paper on page 3 and in discussing the Preston meeting with him it transpired that his 60th birthday was timed to occur just one week later This was where the seed of Woodfest began to germinate Why not invite friends and colleagues to join Woody in Seattle and celebrate this proud event I put the idea to Woody and others at UW they liked it and Woodfest was born

A History of Technoscience David F. Channell,2017-06-14 Are science and technology independent of one another Is technology dependent upon science and if so how is it dependent Is science dependent upon technology and if so how is it dependent Or are science and technology becoming so interdependent that the line dividing them has become totally erased This book charts the history of technoscience from the late nineteenth century to the end of the twentieth century and shows how the military industrial academic complex and big science combined to create new examples of technoscience in such areas as the nuclear arms race the space race the digital age and the new worlds of nanotechnology and biotechnology

Robots In Space Roger D. Launius,Howard E. McCurdy,2008-02-11 A look into the history of space exploration and its possible future and just where exactly robotics fit into it all Given the near incomprehensible enormity of the universe it appears almost inevitable that humankind will one day find a planet that appears to be much like the Earth This discovery will no doubt reignite the lure of interplanetary travel Will we be up to the task And given our limited resources biological constraints and the general hostility of space what shape should we expect such expeditions to take In *Robots in Space* Roger Launius and Howard McCurdy tackle these questions with rigorous scholarship and disciplined imagination jumping comfortably among the worlds of rocketry engineering public policy and science fantasy to expound upon the possibilities and improbabilities involved in trekking across the Milky Way and beyond They survey the literature fictional as well as academic studies and outline the progress of space programs in the United

States and other nations They also assess the current state of affairs to offer a conclusion startling only to those who haven't spent time with Asimov Heinlein and Clarke to traverse the cosmos humans must embrace and entwine themselves with advanced robotic technologies 2008 Outstanding Academic Title Choice Magazine Praise for Robots in Space This short volume manages to capture the history of U S space flight to explain the underpinnings of U S space policy and to plot out the possibilities for our future in space in a style that most anyone can enjoy Andrew McMichael Park City Daily News
