Boyd,2009-09-22 Volume 6 of the successful series *Reviews in Computational Chemistry* contains articles of interest to pharmaceutical chemists biological chemists chemical engineers inorganic and organometallic chemists synthetic organic chemists polymer chemists and theoretical chemists The series is designed to help the chemistry community keep current with the many new developments in computational techniques The writing style is refreshingly pedagogical and non mathematical allowing students and researchers access to computational methods outside their immediate area of expertise **New Challenges for Seismic Risk Mitigation in Urban Areas** Simone Barani,Aybige Akinci,Karin Sesetyan,Dario Albarello,Philippe Gueguen,Stefano Parolai,Roberto Paolucci,Dimitris Pitilakis,2022-11-30 **Dynamic Functional Connectivity in Neuropsychiatric Disorders: Methods and Applications, volume II** Zaicu Cui,Feng Liu,Wenbin Guo,Yuqi Cheng,Zhifen Liu,2023-06-07 Neuropsychiatric disorders have a huge impact on individuals families and societies However the neuropathology underlying cognitive deficits in neuropsychiatric disorders remains unclear Resting state functional connectivity provides a powerful way

to investigate functional alterations underlying cognitive deficits in neuropsychiatric disorders Traditional FC analysis measures the correlations of signals with an assumption that functional connectivity remains constant during the observation period In recent years several studies have demonstrated the feasibility of dynamic methods in characterization of functional brain changes such as dynamic functional connectivity investigated by a sliding window method However selection of window size window stepsize and window type are open areas of research and an important parameter to capture the resting state FC dynamics
