Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-08-03 To guide mission planning military decision makers need information on the health risks of potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk assessment practices The report finds that the military exposure guidelines are appropriate with some modification for providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment

volume the third in a series recommends 1 hour and 24 hour emergency exposure guidance levels EEGLs and 90 day continuous exposure guidance levels CEGLs for acetaldehyde hydrogen chloride hydrogen fluoride hydrogen sulfide and propylene glycol dinitrate **U.S. Army Medical Department Journal** ,2010 **Acute Exposure Guideline Levels for Selected Airborne Chemicals** National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Acute Exposure Guideline Levels,2013-01-28 At the request of the Department of Defense and the Environmental Protection Agency the National Research Council has reviewed the relevant scientific literature compiled by an expert panel and established Acute Exposure Guideline Levels AEGLs for several chemicals AEGLs represent exposure levels below which adverse health effects are not likely to occur and are useful in responding to emergencies such as accidental or intentional chemical releases in community workplace transportation and military settings and for the remediation of contaminated sites Three AEGLs are approved for each chemical representing exposure levels that result in 1 notable but reversible discomfort 2 long lasting health effects and 3 life threatening health impacts Acute Exposure Guideline Levels for Selected Airborne Chemicals Volume 13 includes AEGLs for boron trifluoride bromoacetone chloroacetone hexafluoroacetone perchloryl fluoride piperidine propargyl alcohol trimethoxysilane and tetramethoxysilane and trimethylbenzenes *Acute Exposure Guideline Levels for Selected Airborne Chemicals* Committee on Acute Exposure Guideline Levels,Committee on Toxicology,Board on Environmental Studies and Toxicology,Division on Earth and Life Studies,National Research Council,2013-10-10 Acute Exposure Guideline Levels for Selected Airborne Chemicals Volume 15 identifies reviews and interprets relevant toxicologic and other scientific data for ethyl mercaptan methyl mercaptan phenyl mercaptan tert octyl mercaptan lewisite methyl isothiocyanate and selected monoisocyanates in order to develop acute exposure guideline levels AEGLs for these high priority acutely toxic chemicals AEGLs represent threshold exposure limits exposure levels below which adverse health effects are not likely to occur for the general public and are applicable to emergency exposures ranging from 10 minutes min to 8 h Three level AEGL 1 AEGL 2 and AEGL 3 are developed for each of five exposure periods 10 min 30 min 1 h 4 h and 8 h and are distinguished by varying degrees of severity of toxic effects This report will inform planning response and prevention in the community the workplace transportation the military and the remediation of Superfund sites **Spacecraft Water Exposure Guidelines for Selected Contaminants** National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Spacecraft Exposure Guidelines,2008-11-21 NASA maintains an active interest in the environmental conditions associated with living and working in spacecraft and identifying hazards that might adversely affect the health and well being of crew members Despite major engineering advances in controlling the spacecraft environment some water and air contamination is inevitable Several hundred chemical species are likely to be found in the closed environment of the spacecraft and as the frequency complexity and duration of human space flight increase

identifying and understanding significant health hazards will become more complicated and more critical for the success of the missions To protect space crews from contaminants in potable and hygiene water NASA requested that the National Research Council NRC provide guidance on how to develop water exposure guidelines and subsequently review NASA s development of the exposure guidelines for specific chemicals This book presents spacecraft water exposure guidelines SWEGs for antimony benzene ethylene glycol methanol methyl ethyl ketone and propylene glycol Combined Exposures to Hydrogen Cyanide and Carbon Monoxide in Army Operations National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Combined Exposures to Hydrogen Cyanide and Carbon Monoxide in Army Operations,2008-01-28 In response to a request from the U S Army a committee convened by the National Research Council NRC conducted the first in a sequence of studies evaluating the combined health effects of low level exposure to two chemicals Army personnel are likely to be exposed to in firing tank weapons The Army sought information on whether the two chemicals hydrogen cyanide and carbon monoxide result in similar health impacts and should be assessed together when establishing exposure limits Based on a review of the scientific literature the report finds that the biochemical health impacts of the chemicals are similar and that the Army s proposed approach to setting exposure limits is appropriate Because previous research has focused on high exposures this initial NRC report recommends that futher neurological studies at low concentrations of exposure to the chemicals be conducted
