Investing in a Changing Climate Ludovic Subran, Markus Zimmer, 2023-11-29 Net Zero is not enough We have dithered so long about climate change that by now we would need to go to negative emissions territory well before 2050 to keep global warming under the iconic 1.5°C target The national commitments made so far fall short of what is needed and so do the investments envisioned But even with the best of intentions it is hard for policymakers and potential investors to discern where in the profusion of initiatives and technologies it would make sense to focus their attention and resources This is where this book comes in It offers a clear-eyed view of how far along the decarbonization path six key sectors of the economy are namely energy utilities transportation industry buildings and agriculture and which areas and technologies within each sector are promising in terms of investments to advance the cause Furthermore a special chapter on Africa spotlights a continent that is simultaneously one of the worst affected by climate change the most likely to see its greenhouse gas emissions increase and the one with the greatest potential for solving the West's and the world's energy transition and economic growth conundrum As such the book serves as a concise guide both to the state of the battle against global warming and for investors professionals and policymakers to find their way through the maze of options
