**Budget options** United States. Congressional Budget Office,1977 Technological Change and the Future of Warfare Michael E. O'Hanlon,2011-04-01 In light of the spectacular performance of American high technology weapons in the 1991 Persian Gulf War as well as the phenomenal pace of innovation in the modern computer industry many defense analysts have posited that we are on the threshold of a revolution in military affairs RMA The issue has more than semantic importance Many RMA proponents have begun to argue for major changes in Pentagon budgetary priorities and even in American foreign policy more generally to free up resources to pursue a transformed U S military and to make sure that other countries do not take advantage of the purported RMA before we do This book takes a more measured perspective Beginning with a survey of various types of defense technologies it argues that while important developments are indeed under way most impressively in electronics and computer systems the overall thrust of contemporary military innovation is probably not of a revolutionary magnitude Some reorientation of U S defense dollars is appropriate largely to improve homeland defense and to take advantage of the promise of modern electronics systems and precision guided munitions But radical shifts in U S security policy and Pentagon budget priorities appear unwarranted especially if those shifts would come at the expense of American military engagement in overseas defense missions from Korea to Iraq to Bosnia

O'Hanlon,2010-12-01 This latest study in the Brookings series on U S defense strategy and the defense budget reviews current American military capabilities and offers suggestions for the new administration and Congress Michael O Hanlon makes sense of the hot political topic of military readiness questions the continued relevance of the current two war framework for structuring most conventional combat forces and challenges the wisdom of current plans for the procurement of advanced jet fighters helicopters and submarines The book also focuses on missile defense other means of homeland defense the so called revolution in military affairs and possible conflicts between Taiwan and China that could involve U S forces Throughout the author looks for ways to close the gap between the cost of projected U S defense forces and the budget actually available to the Pentagon      **Constructing Regional Security** W. Durch,2016-04-30 In this book William Durch examines conventional weapons proliferation since World War II the role of arms transfers in fueling regional conflict and prospects for curbing the global arms trade Noting that supply side arms control efforts which seek to constrain the companies and countries that produce and distribute major conventional weapons have a poor international track record Durch argues for a broader approach that tries to get at the demand side of the equation Addressing the political and regional dynamics that impel arms acquisitions he looks at how arms control might be combined with confidence and security building measures to contain demand and how value based arms trade control measures like codes of conduct could be implemented in stepwise fashion consistent with US national interests in regional stability      The Science of War Michael E.
