Numerical Analysis Proc Dundee 1983:

Multigrid Methods Stephen F. McCormick, 1987-12-01 A thoughtful consideration of the current level of development of multigrid methods this volume is a carefully edited collection of papers that addresses its topic on several levels The first three chapters orient the reader who is familiar with standard numerical techniques to multigrid methods first by discussing multigrid in the context of standard techniques second by detailing the mechanics of use of the method and third by applying the basic method to some current problems in fluid dynamics The fourth chapter provides a unified development complete with theory of algebraic multigrid AMG which is a linear equation solver based on multigrid principles The last chapter is an ambitious development of a very general theory of multigrid methods for variationally posed problems Included as an appendix is the latest edition of the Multigrid Bibliography an attempted compilation of all existing research publications on multigrid

Nonlinear Equations and Optimisation L.T. Watson, J.A. Ford, M. Bartholomew-Biggs, 2001-03-14 homepage [sac.cam.ac.uk/na2000/index.html](#)7 Volume Set now available at special set price In one of the papers in this collection the remark that nothing at all takes place in the universe in which some rule of maximum or minimum does not appear is attributed to no less an authority than Euler Simplifying the syntax a little we might paraphrase this as Everything is an optimization problem While this might be something of an overstatement the element of exaggeration is certainly reduced if we consider the extended form Everything is an optimization problem or a system of equations This observation even if only partly true stands as a fitting testimonial to the importance of the work covered by this volume Since the 1960s much effort has gone into the development and application of numerical algorithms for solving problems in the two areas of optimization and systems of equations As a result many different ideas have been proposed for dealing efficiently with for example severe nonlinearities and or very large numbers of variables Libraries of powerful software now embody the most successful of these ideas and one objective of this volume is to assist potential users in choosing appropriate software for the problems they need to solve More generally however these collected review articles are intended to provide both researchers and practitioners with snapshots of the state of the art with regard to algorithms for particular classes of problem These snapshots are meant to have the virtues of immediacy through the inclusion of very recent ideas but they also have sufficient depth of field to show how ideas have developed and how today's research questions have grown out of previous solution attempts The most efficient methods for local optimization both unconstrained and constrained are still derived from the classical Newton approach As well as dealing in depth with the various classical or neo classical approaches the selection of papers on optimization in this volume ensures that newer ideas are also well represented Solving nonlinear algebraic systems of equations is closely related to optimization The two are not completely equivalent however and usually something is lost in the translation Algorithms for nonlinear equations can be roughly classified as locally convergent or globally convergent The

characterization is not perfect Locally convergent algorithms include Newton's method modern quasi Newton variants of Newton's method and trust region methods All of these approaches are well represented in this volume **General Linear Methods for Ordinary Differential Equations** Zdzislaw Jackiewicz, 2009-08-14 Learn to develop numerical methods for ordinary differential equations General Linear Methods for Ordinary Differential Equations fills a gap in the existing literature by presenting a comprehensive and up to date collection of recent advances and developments in the field This book provides modern coverage of the theory construction and implementation of both classical and modern general linear methods for solving ordinary differential equations as they apply to a variety of related areas including mathematics applied science and engineering The author provides the theoretical foundation for understanding basic concepts and presents a short introduction to ordinary differential equations that encompasses the related concepts of existence and uniqueness theory stability theory and stiff differential equations and systems In addition a thorough presentation of general linear methods explores relevant subtopics such as pre consistency consistency stage consistency zero stability convergence order and stage order conditions local discretization error and linear stability theory Subsequent chapters feature coverage of Differential equations and systems Introduction to general linear methods GLMs Diagonally implicit multistage integration methods DIMSIMs Implementation of DIMSIMs Two step Runge Kutta TSRK methods Implementation of TSRK methods GLMs with inherent Runge Kutta stability IRKS Implementation of GLMs with IRKS General Linear Methods for Ordinary Differential Equations is an excellent book for courses on numerical ordinary differential equations at the upper undergraduate and graduate levels It is also a useful reference for academic and research professionals in the fields of computational and applied mathematics computational physics civil and chemical engineering chemistry and the life sciences

The Total Least Squares Problem Sabine Van Huffel, Joos Vandewalle, 1991-01-01 This is the first book devoted entirely to total least squares The authors give a unified presentation of the TLS problem A description of its basic principles are given the various algebraic statistical and sensitivity properties of the problem are discussed and generalizations are presented Applications are surveyed to facilitate uses in an even wider range of applications Whenever possible comparison is made with the well known least squares methods A basic knowledge of numerical linear algebra matrix computations and some notion of elementary statistics is required of the reader however some background material is included to make the book reasonably self contained Computational Solution of Nonlinear Systems of Equations Eugene L. Allgower, Kurt Georg, 1990-04-03 Nonlinear equations arise in essentially every branch of modern science engineering and mathematics However in only a very few special cases is it possible to obtain useful solutions to nonlinear equations via analytical calculations As a result many scientists resort to computational methods This book contains the proceedings of the Joint AMS SIAM Summer Seminar Computational Solution of Nonlinear Systems of Equations held in July 1988 at Colorado State University The aim of the book is to give a wide ranging survey of essentially all of the methods which comprise currently

active areas of research in the computational solution of systems of nonlinear equations A number of entry level survey papers were solicited and a series of test problems has been collected in an appendix Most of the articles are accessible to students who have had a course in numerical analysis

Computational Techniques And Applications - Proceedings Of The Sixth Biennial Conference Henry J Gardner, David Singleton, David Stewart, 1994-06-28 This volume contains papers on computational mathematics development implementation and application of numerical algorithms the development and application of computational systems and numerical modelling Also featured are reports on applications of advanced computer architectures and innovative visualisation techniques It will be a help for developers and implementors of computational methods who wish to find out more about the work of those applying the technology to problems in engineering and science and vice versa

Numerical Mathematics and Applications J. Vignes, R. Vichnevetsky, 2014-06-28 Numerical Mathematics and Applications

Mathematics of Computation 1943-1993: A Half-Century of Computational Mathematics Walter Gautschi, 1994 Proceedings of an International Conference held in Vancouver B C August 1993 to commemorate the 50th anniversary of the founding of the journal Mathematics of Computation It consisted of a Symposium on Numerical Analysis and a Minisymposium of Computational Number Theory This proceedings contains 14 invited papers including two not presented at the conference an historical essay on integer factorization and a paper on componentwise perturbation bounds in linear algebra The invited papers present surveys on the various subdisciplines covered by Mathematics of Computation in a historical perspective and in a language accessible to a wide audience The 46 contributed papers address contemporary specialized work Annotation copyright by Book News Inc Portland OR
