Aesthetic Facial Surgery Juarez M. Avelar, 2021-03-06 Rhytidoplasty is a palliative procedure in which face wrinkles are surgically removed to promote a more youthful appearance. This book, written by leading specialists for Brazil and abroad, discusses a wide variety of topics related to facial rejuvenation. The first sections focus on the surgical planning, including psychological considerations, preparation of the patient, and anatomical and biochemical changes caused by the aging process. It also describes the surgical anatomy of the forehead, face, neck, and eyelids. The third section provides a comprehensive overview of the basic techniques of facelift, with details of refined surgical approaches for each segment of the face and neck. It highlights liposuction techniques, lipo-injection, as well as transference of stem cells, showing their importance in reshaping the facial contours. It addresses both the treatment of soft tissue and craniofacial bone structures to improve the aesthetics of the face. The next sections present the final scars after face lifting, minimally invasive procedures as complementary approaches during rhytidoplasty, and the associated procedures during rhytidoplasty. The last section discusses postoperative care. **Aesthetic Facial Surgery** consists of 64 chapters focusing on all aspects of face lifting and meticulously describes surgical details not covered in other medical books. Featuring numerous figures, photographs, and videos, it is a valuable resource for young and experienced surgeons alike around the world.

In all, there are ten sections covering every aspect of plastic surgery. A very wide range of surgical procedures that can be utilized by the plastic surgeon in training as well as by the established plastic surgeon are described in detail, and in the case of the face, nonsurgical treatments are also fully considered.
