**Regulation and Compliance in Operations** David Loader, 2004-01-12 As such intense oversight is not practical the regulator can only do so much with most of the responsibility resting with the firms and organizations themselves For operations teams their role in protecting the firm stems from their ability to manage critical processes like reconciliation asset position agreements and the nostro accounts efficiently and effectively Regulators need the help and support of the businesses to have a business friendly environment When some abuse the trust placed in them and the regulatory environment a scandal or worse occurs with the result that the majority are penalized as regulators react to criticism and apply more onerous regulations It is often the operations teams that bear most or at least some of the repercussions of greater regulatory oversight of the business It is therefore vitally important for operations teams to have a firm understanding of the regulatory issues and drivers

**Managing Technology in the Operations Function** David Loader, Graeme Biggs, 2002 Looks at issues in technology from the operations function rather than an IT perspective It explores the use of technology for processing provision of client services risk management and business management

procedures needed to enable the monitoring and managing of risk and the authors focus on procedures design implementation and documentation Considerable emphasis is also given to the key controls and the importance of control functions audit and risk management groups and policy Case studies are used to effectively demonstrate success and failure In the financial services industry risk is a constant threat to organizations of all sizes and to the markets themselves Many industry events have shown how dangerous it is when a business operates in an uncontrolled way particularly when the lack of control was not evident to the management of the business until it was too late Controls procedures and risk are occupying more and more management time The responsibility to manage the risks lies with the whole operations team If it is successful in fulfilling this role the overall risk of the business is reduced if it is not successful the consequences may be severe In this book the author has deliberately focussed on the practical side of risk controls and procedures rather than analyse the Basel Capital Accord and the capital requirements etc however the Accord and updates are contained in the Appendices Operations teams need to be aware of risk but not overwhelmed by it Risk management within and by the operations function is the focus of this book From day to day risk to wider risk implications the operations function is reviewed to show the sources and implications of risk situations The definitive series of professional references for those finance professionals concerned with Back office or operations management unique to this industry Presents concise references on the essential management functions such as technology client services and risk management for financial operations management professionals A comprehensive resource from a leading financial management consultant for global banks and institutions

Clearing, Settlement, and Custody David Loader, 2002 Clearing Settlement and Custody focuses on the clearing settlement and custody functions by analyzing how they work and the interaction between the organizations involved The author examines the roles of clearing houses central counterparties central securities depositories and the custodians as well as assessing the impact on the workflow and procedures in the operations function at banks brokers and institutions The changes that are taking place in the industry are explored and the impact for operations managers and supervisors assessed Clearing settlement and custody is at the heart of everything that happens in the financial markets The evolution of clearing and settlement is one that is still happening and as such it is impacting on the operations function through both new practices but also increasingly in terms of regulation risk and reputation In essence the efficient clearing and settlement operation is managing risk not because it is a direct part of the process but more because it is a by product The routine procedures relate to reconciliation and record keeping If these are performed efficiently and accurately it will result in accurate records of activity and profit and loss The settlement process is a key element in identifying and correcting errors made by dealers and traders Failure to identify the error or act promptly will result in potentially serious financial loss as well as worrying audit and the regulators In addition to these concerns the financial service sector is also undergoing a massive rationalization of the structure of

clearing and settlement and seeking the twin goals of automation and shortening settlement cycles The challenge for operations managers is considerable manage costs eradicate inefficiencies create an environment to be competitive and implement the procedures to meet future changes that will occur In this book the author looks at some of the different roles the processes and procedures and the key issues in order to help those in operations meet the challenge The definitive series of professional references for those finance professionals concerned with Back office or operations management unique to this industry Presents concise references on the essential management functions such as technology client services and risk management for financial operations management professionals A comprehensive resource from a leading financial management consultant for global banks and institutions

**Understanding the Markets** David Loader, 2002 As the markets undergo change so too do the administration clearing and settlement functions as the clearing houses securities depositories and custodians merge and diversify This is going to impact on the operations teams that support the trading sales and retail business A failure to be aware of and to understand the impact of changes in the markets will create massive problems greater risk and ultimately financial losses And yet the sheer size and diversity of the global markets together with the rapid pace of change and expansion and the increasing volume of transactions needing to be processed present a massive challenge to operations teams and managers

issues have been addressed by legislation in the form of UCC Article 8 This variety is problematic given that it is possible for an investor to hold securities in a number of different jurisdictions A new UNIDROIT Convention on the issue of Intermediated Securities the Geneva Securities Convention 2009 aims to create a common framework for dealing with these issues This collection of essays explores the issues that arise when securities are held via an intermediary and in particular assesses the solutions put forward by the new Convention on this issue It will be essential reading for practitioners and academics
