Representing Children's Characters:

Representing Children in Chinese and U.S. Children's Literature Claudia Nelson, Rebecca Morris, 2016-04-08

Bringing together children's literature scholars from China and the United States this collection provides an introduction to the scope and goals of a field characterized by active but also distinctive scholarship in two countries with very different rhetorical traditions. The volume's five sections highlight the differences between and overlapping concerns of Chinese and American scholars as they examine children's literature with respect to cultural metaphors and motifs, historical movements, authorship, didacticism, important themes, and the current status of and future directions for literature and criticism. Wide ranging and admirably ambitious in its encouragement of communication between scholars from two major nations, *Representing Children in Chinese and U.S. Children's Literature* serves as a model for examining how and why children's literature more than many literary forms circulates internationally.

The Rhetoric of Character in Children's Literature Maria Nikolajeva, 2002-01-01. Now available in paperback. Until now there was no theoretical research of character in children's fiction and very few comprehensive theoretical studies of literary characters in general. In her latest intellectual foray, the author of *From Mythic to Linear* ponders the art of characterization. Through a variety of critical perspectives she uncovers the essential differences between story (what we are told) and discourse (how we are told) and carefully distinguishes between how these are employed in children's fiction and in general fiction. Yet another masterful work by a leading figure in contemporary criticism.

Representing the Holocaust in Children's Literature Lydia Kokkola, 2013-10-15. Writing about the Holocaust and writing for young readers evoke two quite separate sets of concerns which are not always mutually compatible. The first half of *Representing the Holocaust* focuses on how literary material can present historically verifiable material. The second half examines how such materials will be perceived by young readers, whether they will be able to determine any boundaries between fictionality and factuality, and what motivates young readers to keep reading. The work concludes by placing the study in the context of Holocaust education.

Aesthetic Approaches to Children's Literature Maria Nikolajeva, 2005-05-12. Each chapter includes a short introduction to a specific theoretical approach, an example of its application to a literary text, a number of activities such as study questions and reading exercises, and suggestions for further exploration. Contemporary literary theories discussed include semiotics and hermeneutics, structuralism and narratology, feminist and postcolonial theory, psychoanalysis, and reader response.

Handbook of Children's Literacy Terezinha Nunes, Peter Bryant, 2013-03-09. PETER BRYANT, TEREZINHA NUNES. The time that it takes children to learn to read varies greatly between different orthographies, as the chapter by Sprenger-Charolles clearly shows, and so do the difficulties that they encounter in learning about their own orthography. Nevertheless, most people who have the chance to learn to read do, in the end, read well enough, even though a large number experience some significant difficulties on the way. Most of them eventually become reasonably efficient spellers too, even though they go on making spelling mistakes at any rate if they are

English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children s success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer

Representation of Disability in Children's Video Games Krystina Madej,2024-01-10 Representation of Disability in Children s Video Games looks at how children s engagement with characters and stories in video games helps create the perception of disability they have as teens and adults Drawing on child development theory supported by neuroscience the book shows how the scaffold of information the schema adults have of disability is first created at a very young age as they interact through play with characters with disabilities in narrative video games Positing that early video game play experiences should provide exposure to narrative schemas that add understanding and help create meaning about the disability represented the book presents how such representation in children s video games maps against cognitive development and the psychomotor and cognitive needs and abilities of children 3 12 Through close readings of over 40 PEGI 3 and PEGI 7 ESRB E 10 games and analysis of games as diverse as Backyard Baseball and Sly Cooper the author defines broad categories of representation representation as cosmetic providing exposure but not game play utility as incidental used as a device that provides purpose for the narrative or as more authentically representing the disability as integral to the character and their life The book provides readers with an overview of contemporary games that betters their understanding of how children s games present disability and how children create their perceptions through interaction with characters and stories This book will be of interest to academics and students of game studies in topics such as behavioural science ethics and HCI as well as in sociology communications and digital media It is pertinent in particular to game developers and to educators disability advocates parents and policy makers
