**Genes, Women, Equality** Mary Briody Mahowald, 1999-10-14 Genetics is not gender neutral in its impact Mahowald cites a wide range of biological and psychosocial examples that reveal its different impact on men and women especially with regard to reproduction and caregiving She examines the extent to which these differences are associated with gender injustice arguing for positions that reduce inequality between the sexes The critical perspective Mahowald brings to this analysis is an egalitarian interpretation of feminism that demands attention to inequalities arising from racism ethnocentrism ableism and classism as well as sexism Eschewing a notion of equality as sameness Mahowald defines equality as attribution of the same value to different objects Gender justice she claims imputes the same value to men and women despite their differences It can only be maximized by practical efforts to equalize the burdens and benefits associated with genetics The topics considered include participation in research allocation of genetic services cultural difference sex selection misattributed paternity prenatal and preimplantation diagnosis carrier testing genetic interventions genetic disabilities preferences for genetic ties to offspring genetic susceptibility to late onset disorders behavioral genetics genetic discrimination in employment and insurance and human cloning Cases both real and concocted are used to illustrate the questions addressed

*Autonomy and the Situated Self* Rachel Haliburton, 2013-11-26 **Bioethics** tells a heroic story about its origins and purpose The impetus for its contemporary development can be traced to concern about widespread paternalism in medicine mistreatment of research subjects used in medical experimentation and

questions about the implication of technological developments in medical practice Bioethics then began as a defender of the interests of patients and the rights of research participants and understood itself to play an important role as a critic of powerful interests in medicine and medical practice Autonomy and the Situated Self argues that as bioethics has become successful it no longer clearly lives up to these founding ideals and it offers a critique of the way in which contemporary bioethics has been co-opted by the very institutions it once sought with good reason to criticize and transform In the process it has become mainstream moved from occupying the perspective of a critical outsider to enjoying the status of a respected insider whose primary role is to defend existing institutional arrangements and its own privileged position The mainstreaming of bioethics has resulted in its domestication it is at home in the institutions it would once have viewed with skepticism and a central part of practices it would once have challenged Contemporary bioethics is increasingly dominated by a conception of autonomy that detaches the value of choice from the value of the things chosen and the central role occupied by this conception makes it difficult for the bioethicist to make ethical judgments Consequently despite its very public successes contemporary bioethics is largely failing to offer the ethical guidance it purports to be able to provide In addition to providing a critique this book offers an alternative framework that is designed to allow bioethicists to address the concerns that led to the creation of bioethics in the first place This alternative framework is oriented around a conception of autonomy that works within the ethical guidelines provided by a contemporary form of virtue ethics and which connects the value of autonomous choice to a conception of human flourishing

*The Impossibility of Motherhood* Patrice

DiQuinzio, 1999-09-13 An adequate analysis of experiences and situations specific to women especially mothering requires consideration of women's difference A focus on women's difference however jeopardizes feminism's claims of women's equal individualist subjectivity and risks recuperating the inequality and oppression of women especially the view that all women should be mothers want to be mothers and are most happy being mothers This book considers how thinkers including Simone de Beauvoir Julia Kristeva Nancy Choderow and Adrienne Rich struggle to negotiate this dilemma of difference in analyzing mothering encompassing the paradoxes concerning embodiment gender and representation they encounter Patrice Di

Quinzio shows that mothering has been and will continue to be an intractable problem for feminist theory itself and suggests the political usefulness of an explicitly paradoxical politics of mothering

**Origin Stories in Political Thought** Joanne Harriet Wright, 2004-01-01 Origin stories are a recurring motif in the history of political thought Presented as narratives that describe the beginnings of politics and power these stories are among the most provocative and politically contentious means by which Western society organizes and represents its experience Indeed as scripts of citizenship origin stories seek to manufacture consent to a preconceived and hierarchical political vision Joanne H Wright s Origin Stories in Political Thought examines Plato s Timaeus Hobbes s story of the state of nature and the social contract and early Second Wave feminist stories about the beginnings of patriarchal social relations Using a historically sensitive feminist methodology Wright documents and deconstructs the tradition of telling origin stories in the larger history of political thought Although individual tales have been assessed in current scholarship the motif of the origin story itself has until now escaped systematic analysis With meticulous research and convincing conclusions Origin Stories in Political Thought makes a groundbreaking and valuable contribution to both feminist and political studies

Without Apology Shannon Stettner, 2016-08-26 Until the late 1960s the authorities on abortion were for the most part men politicians clergy lawyers physicians all of whom had an interest in regulating women s bodies Even today when we hear women speak publicly about abortion the voices are usually those of the leaders of women s and abortion rights organizations women who hold political office and on occasion female physicians We also hear quite frequently from spokeswomen for anti

abortion groups Rarely however do we hear the voices of ordinary women women whose lives have been in some way touched by abortion Their thoughts typically owe more to human circumstance than to ideology and without them we run the risk of thinking and talking about the issue of abortion only in the abstract Without Apology seeks to address this issue by gathering the voices of activists feminists and scholars as well as abortion providers and clinic support staff alongside the stories of women whose experience with abortion is more personal With the particular aim of moving beyond the polarizing rhetoric that has characterized the issue of abortion and reproductive justice for so long Without Apology is an engrossing and arresting account that will promote both reflection and discussion

**New Blood** Chris Bobel, 2010-05-05 New Blood offers a fresh interdisciplinary look at feminism in flux For over three decades menstrual activists have questioned the safety and necessity of feminine care products while contesting menstruation as a deeply entrenched taboo Chris Bobel shows how a little known yet enduring force in the feminist health environmental and consumer rights movements lays bare tensions between second and third wave feminisms and reveals a complicated story of continuity and change within the women's movement Through her critical ethnographic lens Bobel focuses on debates central to feminist thought including the utility of the category gender and challenges to building an inclusive feminist movement Filled with personal narratives playful visuals and original humor New Blood reveals middle aged progressives communing in Red Tents urban punks and artists culture jamming commercial menstrual products in their zines and sketch comedy queer anarchists practicing DIY health care African American health educators espousing holistic womb health and hopeful mothers refusing to pass on the shame to their pubescent daughters With verve and conviction Bobel illuminates today's feminism on the ground indisputably vibrant contentious and ever dynamic

**Bioethics** Stephen Holland, 2016-12-27 This book provides a clear and comprehensive introduction to contemporary bioethics It also presents provocative philosophically informed arguments on current bioethical issues Holland engages with debates ranging from the more familiar such as euthanasia advance decisions to refuse treatment and new reproductive technologies to the philosophical implications of recent developments in genetics including prenatal genetic therapy genetic enhancement and human cloning The book is built around four crucial themes The first is moral status what are the implications of the moral status of human embryos or animals for our biomedical practices The second theme life death and killing looks at the ethics of ending or failing to lengthen human life Holland then explores various questions of personal identity raised in contemporary bioethical debates Finally he presents and develops a version of the argument from nature which continues to be influential in bioethics in order to make sense of the objection that some biomedical innovations are unnatural Structuring the discussions in this way creates an engaging introduction to bioethics that is an ideal textbook for students whilst offering much to stimulate colleagues in the field This second edition has been thoroughly and comprehensively updated to reflect the most recent advances in bioethics and includes an entirely new chapter on the ethical treatment of patients in the minimally conscious state

Shaw,2006 Cloning embryo research and genetic modification are three of the most controversial issues of our time Is it ethical to use cloning as a means of reproduction Are embryos people Is there a difference between removing genetic disease and creating designer babies This book will attempt to show that these and other problems are ultimately resolvable given careful and unbiased application of established ethical principles many of which underlie common morality These principles when applied to the problems of the new genetic technologies form the basis of a new genetic morality This book applies established principles of biomedical ethics to the new genetic technologies and examines the ethical implications of reproductive and therapeutic cloning genetic modification and stem cell research from a deontological and a rule utilitarian perspective Finally it seeks to establish what if anything is wrong with each of these practices and why
