Reproductive and Fat Cycles in Caribbean Anolis Lizards Paul Licht, *Reproductive and Fat Cycles in Caribbean Anolis Lizards* Paul Licht, George C. Gorman, 1970 **Anolis Lizards of the Caribbean** Jonathan Roughgarden, 1995-05-18

The Anolis lizards of the Caribbean are ideally suited for the study of evolutionary ecology Offering fascinating insights into the more than 150 species dispersed throughout the Caribbean islands Jonathan Roughgarden details the differences between species in a wide range of behavioral and physical characteristics including foraging behaviors body size and habitat use resulting from evolutionary divergences concurrent with the plate tectonic origins of the region This book will be of interest to students and researchers ecology and theoretical tropical and population biology **Anolis Lizards of the Caribbean** Joan Roughgarden, 1995-05-18 The Anolis lizards of the Caribbean are ideally suited for the study of evolutionary ecology Offering fascinating insights into the more than 150 species dispersed throughout the Caribbean islands Jonathan Roughgarden details the differences between species in a wide range of behavioral and physical characteristics including foraging behaviors body size and habitat use resulting from evolutionary divergences concurrent with the plate tectonic origins of the region This book will be of interest to students and researchers ecology and theoretical tropical and population biology *Caribbean Amphibians and Reptiles* Brian I. Crother, 1999-06-02 Amphibians and reptiles are the most numerous diverse and frequently encountered animals on the Caribbean islands This book provides a variety of perspectives on this amazing group of organisms Caribbean Amphibians and Reptiles compiled by an international team of zoologists takes a fresh and detailed look at the complex biological puzzle of the Caribbean The first true overview of the islands it includes a historical examination of the people who have studied the Caribbean amphibians and reptiles The book reviews the ecology evolutionary history and biogeographic explanations for the origins and diversity of the region s fauna with island by island coverage It puts the Caribbean in perspective by comparing the islands to Central America and its amphibian reptile diversity Additionally the book includes figures tables and color plates which bring to life some of the region s most spectacular creatures Key Features Presents the first complete review of amphibians and reptiles in the Caribbean Includes color plates and island maps Contributors are recognized authorities in the field **Hormones and Reproduction in Fishes, Amphibians, and Reptiles** David O. Norris, Richard E. Jones, 2012-12-06 Comparative endocrinology is one of the most rapidly developing subdisciplines within the field of endocrinology and it is having a significant impact on research at the molecular cellular organismal and environmental levels Much of the current ferment in endocrinology is in reproductive endocrinology The purpose of this volume on hormones and reproduction in fishes amphibians and reptiles is to summarize our present understandings and to identify important research problems to be addressed in the area of comparative reproductive endocrinology It was inspired by the gathering at Copper Mountain Colorado of eminent endocrine scientists from around the world on the occasion of the Tenth International Symposium on Comparative Endocrinology in July 1985

While preparing for that meeting we decided that a special volume on reproductive endocrinology was needed to summarize what is known and to stimulate research in particular directions Why do we emphasize fishes amphibians and reptiles First knowledge about the reproductive endocrinology of these ectothermic vertebrates can provide a clearer picture of the evolution of reproductive hormones and their effects on target organs This comparative approach can lead to new theories about the evolution of reproductive control mechanisms Second studies concerning the reproductive endocrinology of lower vertebrates can result in development of model systems for application to studies of birds and mammals Indeed information about the patterns of reproductive control in ectothermic vertebrates can tell us which are evolutionarily stable and which are labile

Reproductive Biology and Phylogeny of Snakes Robert D. Aldridge, David M. Sever, 2016-04-19 Offering coverage of a wide range of topics on snake reproduction and phylogeny this comprehensive book discusses everything from primordial germ migration in developing embryos to semelparity death after reproduction in the asp viper Beginning with a review of the history of snake reproductive studies it presents new findings on development

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2024-08-05 Hormones and Reproduction of Vertebrates Volume 3 Reptiles is the third of five second edition volumes representing a comprehensive and integrated overview of hormones and reproduction in fishes amphibians reptiles birds and mammals The book includes coverage of endocrinology neuroendocrinology physiology behavior and anatomy of reptilian reproduction It provides a broad treatment of the roles of pituitary thyroid adrenal and gonadal hormones in all aspects of reproduction as well as descriptions of major life history events New to this edition is a concluding assessment of the effect of environmental influences on reptiles Initial chapters in this book broadly examine sex determination reproductive neuroendocrinology stress and hormonal regulation as it relates to testicular and ovarian function Subsequent chapters examine hormones and reproduction of specific taxa including turtles crocodilians lizards and snakes The book concludes with an examination of endocrine disruption of reproduction in reptiles Hormones and Reproduction of Vertebrates Volume 3 Reptiles is designed to provide a readable coordinated description of reproductive basics in reptiles as well as an introduction to the latest trends in reproductive research and a presentation of our understanding of reproductive events gained over the past decade It may serve as a stand alone reference for researchers and practitioners in the field of herpetology or as one of five coordinated references aligned to provide topical treatment across vertebrate taxa for researchers practitioners and students focused on vertebrate endocrinology Covers endocrinology neuroendocrinology physiology behavior and anatomy of reptile reproduction Includes pituitary thyroid adrenal and gonadal hormones Focuses on turtles crocodilians lizards and snakes Provides new coverage on environmental influences on reptiles

Lizards in an Evolutionary Tree Jonathan B. Losos, 2011-02-09 In a book both beautifully illustrated and deeply informative Jonathan Losos a leader in evolutionary ecology celebrates and analyzes the diversity of the natural world that the fascinating anoline lizards epitomize Readers who are drawn to nature by its beauty or

Lopez,2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research

scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Sperm Competition and Sexual Selection Tim R. Birkhead, Anders Pape Møller, 1998-08-12 Sperm Competition and Sexual Selection presents the intricate ways in which sperm compete to fertilize eggs and how this has prompted reinterpretations of breeding behavior This book provides a theoretical framework for the study of sperm competition which is a central part of sexual selection It also discusses the roles of females and the relationships between paternal care in sperm competition The chapters focusing on taxonomic development are diverse and cover all the major animal groups both vertebrate and invertebrate and plants The final chapter provides an overview discussing the relationship between sperm competition and sexual selection in terms of both function and mechanism and how these translate into species fitness This book will be of prime interest to behaviorists ecologists and evolutionary biologists suggesting new avenues of research and new ways of approaching old problems The only up to date summary of a central and popular subject Well known editors and authors Provides a theoretical framework for the study of sperm competition Covers all major animal groups Includes a chapter on plants Wildlife Abstracts, 1976 Biogeography and Ecology of New Guinea J.L. Farner, 2013-03-07 From 11 to 15 July 1977 about 60 physiologists endocrinologists ecologists and other biologists from 14 countries convened at the University Montpellier for a symposium on Environmental Endocrinology This meeting was organized as a Satellite Symposium of the 27th International Congress of Physiological Sciences Paris 18-23 July 1977 This volume is a record of the communications presented at the symposium The objectives of the program were to examine the role of the endocrine system in a wide spectrum of adjustments and adaptations to changes in environmental conditions by

various species of animals including man and to promote an exchange of ideas among investigators who have approached these functions from diverse aspects The diversity of the information and ideas communicated is great Of necessity they represent only an extremely modest selection of the many facets of endocrine function in the interaction of animals with their environments Beyond the usefulness of the communications individually we hope that they collectively demonstrate the substantial heuristic value of the concept of environmental endocrinology as it was perceived by the participants We acknowledge gratefully the kindness and sympathy of Professor Jacques ROUZAUD President of the University of Montpellier II for his generous extension of the hospitality of the University to the Symposium We are most grateful to Mrs Monique VIEU who effected so well the secretarial organization of the Sympos
