Hedging in Scientific Research Articles Ken Hyland, 1998-03-15 This book provides a comprehensive study of hedging in academic research papers relating a systematic analysis of forms to a pragmatic explanation for their use Based on a detailed examination of journal articles and interviews with research scientists the study shows that the extensive use of possibility and tentativeness in research writing is intimately connected to the social and institutional practices of academic communities and is at the heart of how knowledge comes to be socially accredited through texts The study identifies the major forms functions and distribution of hedges and explores the research article genre in detail to present an explanatory framework based on a complex social and ideological interpretive environment The results show that hedging is central to Scientific argument individual scientists and ultimately to science itself The importance of hedging to student writers is also recognised and a chapter devoted to teaching implications

Project Management for Research A.B. Badiru, 2012-12-06 Graduate research is a complicated process which many engineering and science students aspire to undertake The complexity of the process can lead to failures for even the most brilliant students Success with graduate level research requires not only a high level of intellectual ability but also a high level of program management skills After many years of supervising several graduate students I have found that most of them have the same basic problems of planning and implementing their research programs Even the advanced graduate students need the same mentoring and management guidance that has little to do with actual classroom performance It is my conjecture that graduate students could make a better job of their research programs if a self paced guide were available to

them The guide provided in this book covers topics ranging from how to select an appropriate research problem to how to schedule and execute research tasks The book takes a project management approach to planning and implementing graduate research in engineering science and manufacturing disciplines It is a self paced guide that will help graduate students and advisors answer most of the basic questions about how to do this and how to do that There is a need for such a guide book The book will alleviate frustration on the part of the student and the research advisor Writing and Thinking in Contemporary Academia Martin Grünfeld, 2019-06-19 Across disciplinary borders clarity is taken for granted as a cardinal virtue of communication in contemporary academia But what is clarity how is it practised in writing across disciplinary borders and how does it affect our ways of researching and thinking This book explores such questions by scrutinising the ideal of clarity beyond its apparently self evident value Through a multi methodological empirical analysis of the ideal of clarity the author offers a sketch of what is termed the poetics of clarity which is unfolded as a field of tension with important implications for sentence formation authorial positioning and textual organisation By way of a series of reflections on the possible consequences of this for thinking this volume also explores the parts of knowledge production that may be marginalised especially poetic language use biases interests and contexts multi dimensional arguments and errors Revealing a positivist bias and a regime of high speed consumption that characterise what in certain regards might be considered a productive space for knowledge production Writing and Thinking in Contemporary Academia will appeal to scholars with interests in the sociology of knowledge continental philosophy the philosophy of science and academic writing **Teaching the Research Paper** James E. Ford, 1995 Dedicated to helping teachers teach the research paper more effectively as distinguished from the numerous manuals written for students **Research Paper NC.** , 1981 **Research and Advanced Technology for Digital Libraries** Carol Peters, 1997-08-22 This book constitutes the refereed proceedings of the First European Conference on Research and Advanced Technology for Digital Libraries held in Pisa Italy in September 1997 The volume presents 23 revised full papers selected from 77 submissions Also included are two invited contributions The papers are organized in topical sections on supporting user interfaces metadata information retrieval DL architectures multilingual information retrieval structured documents and case studies Cracking the Common Core William E. Lewis, Sharon Walpole, Michael C. McKenna, 2013-11-25 This book guides teachers in grades 6 12 to strategically combine a variety of texts including literature informational texts and digital sources to meet their content area goals and the demands of the Common Core State Standards CCSS It presents clear cut ways to analyze text complexity design challenging text sets and help students get the most out of what they read Provided are practical instructional ideas for building background knowledge promoting engagement incorporating discussion and text based writing and teaching research skills Appendices offer sample unit plans for English language arts history social studies and science classrooms More than 20 reproducible coaching templates and other tools can be downloaded and printed in a convenient 8 1 2 x 11 size **Information**
