Research Directions In Object Oriented Programming Computer Systems Series:

Object-oriented Technology For Database And Software Systems V S Alagar, Rokia Missaoui, 1995-09-28 Object orientation has become a must know subject for managers researchers and software practitioners interested in the design evolution reuse and management of efficient software components The book contains technical papers reflecting both theoretical and practical contributions from researchers in the field of object oriented OO databases and software engineering systems The book identifies actual and potential areas of integration of OO and database technologies current and future research directions in software methodologies and reflections about the OO paradigm In providing current research and relevant information about this promising and rapidly growing field of object oriented databases and software engineering systems this book is invaluable to research scientists practitioners and graduate students working in the areas of databases and software engineering

ECOOP '88 European Conference on Object-Oriented Programming Stein Gjessing, Kristen Nygaard, 1988-07-19 The field of Object Oriented Programming OOP has attracted increasing attention during the last few years OOP is now recognized as an important tool for making better and more flexible information systems This book is the proceedings of the second European Conference on Object Oriented Programming ECOOP 88 that was held in Oslo Norway from August 15 to 17 1988 The objectives of ECOOP 88 were to present the best international work in the field of OOP to interested persons from industry and academia and to be a forum for the exchange of ideas and the growth of professional relationships Each of the 103 papers submitted was subject to a thorough refereeing process The 22 papers selected are collected in these proceedings together with one invited paper These 23 papers from 13 different countries comprise the currently best international work in the field of OOP The contents of the papers include areas such as Theory Languages Didactics Implementation Applications Concurrency and Databases The interest in object oriented programming is rapidly increasing especially within the areas of Concurrency and Databases With its 5 papers on concurrency and 7 papers on databases the proceedings contain important new material on these subjects This book is a must for persons who want to keep themselves up to date in the field of OOP

ECOOP '95 - Object-Oriented Programming Walter Olthoff, 2003-05-16 For the ninth time now the European Conference on Object Oriented Programming provides a mid summer gathering place for researchers practitioners students and newcomers in the field of object technology Despite fierce competition from an increasing number of attractive conferences on object related topics ECOOP has successfully positioned itself as the premier European object technology conference One reason is without doubt the composition of the conference week and the nature of its events Running in parallel on the first two days a comprehensive tutorial program and a very selective workshop program are offered to attendees This is followed by a three day technical program organized in a single track providing a highly communicative atmosphere of scientific exchange and learning Overlapping with these events are a two day industrial exhibition and a two day opportunity for non industrial system developers to demonstrate their

software Thus ECOOP is not just a conference on programming but an event touching on the full spectrum of object technology This volume constitutes the proceedings of the Ninth European Conference on Object Oriented Programming ECOOP held in Aarhus Denmark August 7 11 1995 Previous ECOOP conferences were held in Paris France Oslo Norway Nottingham England Ottawa Canada jointly with OOPSLA Geneva Switzerland Utrecht the Netherlands Kaiserslautern Germany and Bologna Italy Object technology continues to increase its impact on the corporate world *ECOOP '96 - Object-Oriented Programming* Pierre Cointe, 1996-06-26 This book constitutes the refereed proceedings of the 10th European Conference on Object Oriented Programming ECOOP 96 held in Linz Austria in July 1996 The 21 full papers included in revised version were selected from a total of 173 submissions based on technical quality and originality criteria The papers reflect the most advanced issues in the field of object oriented programming and cover a wide range of current topics including applications programming languages implementation specification distribution databases and design

Foundations of Software Technology and Theoretical Computer Science Conjeevaram E. Veni Madhavan, 1989-12-06 The papers in this volume accepted for the conference on foundations of software technology and theoretical computer science project research results in Algorithmics design and analysis of graph geometric algebraic and VLSI algorithms data structures average analysis complexity theory parallel parsing Concurrency algebraic semantics event structures Logic programming algebraic properties semantics Software technology program transformations algebraic methods These results together with the formal techniques employed to present them reflect current trends pursued by leading research groups around the world The papers treat their topics in depth by carefully reviewing existing results developing and demonstrating new techniques and suggesting further directions for research **Database and Expert Systems Applications** Trevor Bench-Capon, Giovanni Soda, A Min Tjoa, 2003-07-31 The Database and Expert Systems Applications DEXA conferences bring together researchers and practitioners from all over the world to exchange ideas experiences and opinions in a friendly and stimulating environment The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems DEXA covers a broad field and all aspects of database knowledge base and related technologies and their applications are represented Once again there were a good number of submissions 241 papers were submitted and of these the programme committee selected 103 to be presented DEXA 99 took place in Florence and was the tenth conference in the series following events in Vienna Berlin Valencia Prague Athens London Zurich Toulouse and Vienna The decade has seen many developments in the areas covered by DEXA developments in which DEXA has played its part I would like to express thanks to all the institutions which have actively supported and made possible this conference namely University of Florence Italy IDG CNR Italy FAW University of Linz Austria Austrian Computer Society DEXA Association In addition we must thank all the people who have contributed their time and effort to make the conference possible Special thanks go to Maria Schweikert Technical University of Vienna M Neubauer and G Wagner FAW University of Linz We must

also thank all the members of the programme committee whose careful reviews are important to the quality of the conference

Ada: The Design Choice Angel Alvarez, 1989-07-06 This book contains the proceedings of the 1989 Ada Europe conference These meetings constitute the most significant events in this field within Europe and attract delegates from around the world The theme of this year's conference is design methods this is of major importance since both Ada compilers and the applications built with Ada are huge Papers in this volume which have all been carefully refereed study the design methods within Ada and how they may need to be augmented with additional methods and tools where necessary They make informed and essential reading for all involved in the use of Ada in industry and research

Research

Directions in Concurrent Object-Oriented Programming Gul Agha, Peter Wegner, Akinori Yonezawa, 2003-02-01 This collection of original research provides a comprehensive survey of developments at the leading edge of concurrent object oriented programming It documents progress from general concepts to specific descriptions in programming language design semantic tools systems architectures and applications Chapters are written at a tutorial level and are accessible to a wide audience including researchers programmers and technical managers The problem of designing systems for concurrent programming has become an increasingly important area of research in computer science with a concomitant increase in the popularity of object based programming Because parallelism is a natural consequence of the use of objects the development of systems for concurrent object oriented programming is providing important software support for a new generation of concurrent computers

Advances in Computer Systems Architecture Amos Omondi, Stanislav Sedukhin, 2003-11-03 This conference marked the first time that the Asia Pacific Computer Systems Architecture Conference was held outside Australasia i e Australia and New Zealand and was we hope the start of what will be a regular event The conference started in 1992 as a workshop for computer architects in Australia and subsequently developed into a full edged conference covering Australia Two additional major changes led to the present conference The first was a change from computer architecture to computer systems architecture a change that recognized the importance and close relationship to computer architecture of certain levels of software e g operating systems and compilers and of other areas e g computer networks The second change which reflected the increasing number of papers being submitted from Asia was the replacement of Australasia with Asia Pacific This year's event was therefore particularly significant in that it marked the beginning of a truly Asia Pacific conference It is intended that in the future the conference venue will alternate between Asia and Australia New Zealand and although still small we hope that in time the conference will develop into a major one that represents Asia to the same tent as existing major computer architecture conferences in North America and Europe represent those regions

Software Engineer's

Reference Book John A McDermid, 2013-10-22 Software Engineer's Reference Book provides the fundamental principles and general approaches contemporary information and applications for developing the software of computer systems The book is comprised of three main parts an epilogue and a comprehensive index The first part covers the theory of computer

science and relevant mathematics Topics under this section include logic set theory Turing machines theory of computation and computational complexity Part II is a discussion of software development methods techniques and technology primarily based around a conventional view of the software life cycle Topics discussed include methods such as CORE SSADM and SREM and formal methods including VDM and Z Attention is also given to other technical activities in the life cycle including testing and prototyping The final part describes the techniques and standards which are relevant in producing particular classes of application The text will be of great use to software engineers software project managers and students of computer science

The TSQL2 Temporal Query Language Richard T. Snodgrass, 2012-12-06 Temporal databases have been an active research topic for at least fifteen years During this time several dozen temporal query languages have been proposed Many within the temporal database research community perceived that the time had come to consolidate approaches to temporal data models and calculus based query languages to achieve a consensus query language and associated data model upon which future research can be based While there were many query language proposals with a diversity of language and modeling constructs common themes kept resurfacing However the community was quite fragmented with each research project being based on a particular and different set of assumptions and approaches Often these assumptions were not germane to the research per se but were made simply because the research required a data model or query language with certain characteristics with the particular one chosen rather arbitrarily It would be better in such circumstances for research projects to choose the same language Unfortunately no existing language had attracted a following large enough to become the one of choice In April 1992 Richard Snodgrass circulated a white paper that proposed that a temporal extension to SQL be produced by the research community Shortly thereafter the temporal database community organized the ARPA NSF International Workshop on an Infrastructure for Temporal Databases which was held in Arlington TX in June 1993

Theoretical Aspects of Object-oriented Programming Carl A. Gunter, John C. Mitchell, 1994 Although the theory of object oriented programming languages is far from complete this book brings together the most important contributions to its development to date focusing in particular on how advances in type systems and semantic models can contribute to new language designs The fifteen chapters are divided into five parts Objects and Subtypes Type Inference Coherence Record Calculi and Inheritance The chapters are organized approximately in order of increasing complexity of the programming language constructs they consider beginning with variations on Pascal and Algol like languages developing the theory of illustrative record object models and concluding with research directions for building a more comprehensive theory of object oriented programming languages Part I discusses the similarities and differences between objects and algebraic style abstract data types and the fundamental concept of a subtype Parts II IV are concerned with the record model of object oriented languages Specifically these chapters discuss static and dynamic semantics of languages with simple object models that include a type or class hierarchy but do not explicitly provide what is often called dynamic binding Part V considers

extensions and modifications to record object models moving closer to the full complexity of practical object oriented languages Carl A Gunter is Professor in the Department of Computer and Information Science at the University of Pennsylvania John C Mitchell is Professor in the Department of Computer Science at Stanford University

Invasive Software Composition Uwe Aßmann, 2013-11-11 Over the past two decades software engineering has come a long way from object based to object oriented to component based design and development Invasive software composition is a new technique that unifies and extends recent software engineering concepts like generic programming aspect oriented development architecture systems or subject oriented development To improve reuse this new method regards software components as grayboxes and integrates them during composition Building on a minimal set of program transformations composition operator libraries can be developed that parameterize extend connect mediate and aspect weave components The book is centered around the JAVA language and the freely available demonstrator library COMPOST It provides a wealth of materials for researchers students and professional software architects alike

Distributed and Parallel Database Object Management Elisa Bertino, Tamer Özsu, 2012-12-06 Distributed and Parallel Database Object Management brings together in one place important contributions and state of the art research results in this rapidly advancing area of computer science Distributed and Parallel Database Object Management serves as an excellent reference providing insights into some of the most important issues in the field

From Object-Orientation to Formal Methods Olaf Owe, Stein Krogdahl, Tom Lyche, 2004-03-31 This book is dedicated to the memory of Ole Johan Dahl who passed away in June 2002 at the age of 70 shortly after he had received together with his colleague Kristen Nygaard the ACM Alan M Turing Award For ideas fundamental to the emergence of object oriented programming through their design of the programming languages Simula I and Simula 67 This Festschrift opens with a short biography and a bibliography recollecting Ole Johan Dahl s life and work as well as a paper he wrote entitled The Birth of Object Orientation the Simula Languages The main part of the book consists of 14 scientific articles written by leading scientists who worked with Ole Johan Dahl as students or colleagues In accordance with the scope of Ole Johan Dahl s work and the book s title the articles are centered around object orientation and formal methods

formal techniques in distributed systems verification and testing types service types and subtyping specification verification and testing of quality of service constraints and formal methods and the object life cycle It contains the selected proceedings of the International Workshop on Formal Methods for Open Object based Distributed Systems sponsored by the International Federation for Information Processing and based in Paris France in March 1996 Object-Based Models and Languages for Concurrent Systems Paolo Ciancarini,Oscar Nierstrasz,Akinori Yonezawa,1995-06-20 This volume presents carefully refereed versions of the best papers presented at the Workshop on Models and Languages for Coordination of Parallelism and Distribution held during ECOOP 94 in Bologna Italy in July 1994 Recently a new class of models and languages for distributed and parallel programming has evolved all these models share a few basic concepts simple features for data description and a small number of mechanisms for coordinating the work of agents in a distributed setting This volume demonstrates that integrating such features with those known from concurrent object oriented programming is very promising with regard to language support for distribution and software composition **Information Systems and Technology in the International Office of the Future** Bernard Glasson,Doug Vogel,Pieter W. Bots,J. Nunamaker,2013-06-29 Globalization of business internationalization of trade and increasing prevalence of multi cultural interdisciplinary teams are beginning to redefine the nature of office work Different time different place different culture teams will become the norm Same time same place same culture teams will become the exception The International Office of the Future IOF will be a dramatically different environment than that which exists in the majority of today s organizations Prospects for the IOF give rise to numerous questions which are addressed in this book What are the salient issues What design options or solution strategies exist to address these issues How might these design options be best implemented What are their implications In addition a number of specific topics will be discussed including multi cultural team productivity IT platform requirements and global telecommunications **Proceedings of the Second International Workshop on Database Programming Languages** Richard Hull,Ronald Morrison,David Stemple,1990 *New Trends in Software Methodologies, Tools and Techniques* Hamido Fujita,Paul Johannesson,2003
