Chromatin & Transcriptional Tango on the Immune Dance Floor Ananda L Roy, 2015-04-14 Signaling through the cell surface antigen receptor is a hallmark of various stages of lymphocyte development and adaptive immunity Besides the adaptive immune system the innate immunity is equally important for protection However the mechanistic connection between signaling chromatin changes and downstream transcriptional pathways in both innate and adaptive immune system remains incompletely understood in hematopoiesis A related issue is how the enhancers communicate to the promoters in a stage specific fashion and in the context of chromatin Because the factors that regulate chromatin are generally present and active in most cell types how could cell type and or stage specific chromatin architecture be achieved in response to a particular immune signal The genetic loci that encode lymphocyte cell surface receptors are in an unrearranged or germline configuration during the early stages of development Thus in addition to expressing lineage and or stage specific transcription factors during each developmental stage lymphocytes also need to rearrange their cognate receptor loci in a strictly ordered fashion Hence there must be a tightly coordinated communication between the recombination machinery and the transcriptional machinery including chromatin regulators at every developmental step Mature B cells also undergo classswitch recombination and somatic hypermutation Importantly along the way these cells must avoid autoimmune responses and only those cells capable of recognizing foreign antigens are preserved to reach peripheral organs where they must function The exquisite regulation that govern chromatin accessibility recombination and transcription regulation in response to the environmental signals in the immune system is discussed here is a series of articles

Intelligence and International Security Len Scott, R. Gerald Hughes, Martin Alexander, 2013-10-31 The events of 9 11 and subsequent acts of jihadist terrorism together with the failures of intelligence agencies over Iraq's Weapons of Mass Destruction have arguably heralded a new age of intelligence For some this takes the form of a crisis of legitimacy For others the threat of cataclysmic terrorism involving chemical biological radiological or nuclear attack gives added poignancy to the academic contention that intelligence failure is inevitable Many

of the challenges facing intelligence appear to be both new and deeply worrying In response intelligence has clearly taken on new forms and new agendas How these various developments are viewed depends upon the historical normative and political frameworks in which they are analysed This book addresses fundamental questions arising in this new age The central aim of the collection is to identify key issues and questions and subject them to interrogation from different methodological perspectives using internationally acclaimed experts in the field A key focus in the collection is on British and North American perspectives Recent trends and debates about the organisation and conduct of intelligence provide key themes for exploration Underpinning several contributions is the recognition that intelligence faces a conflict of ideas as much as practices and threats This book was published as a special issue of *Intelligence and National Security* Federal Legislation Annotations, 2005 **Current Contents** Institute for Scientific Information (Philadelphia), 2002 *Weedon's Skin Pathology E-Book* James W. C. Andersson, Helena Hallström, Bengt A. Kihlman, 2004 The first part of the report deals with occurrence of methylxanthines in foods beverages and medicines and estimates of caffeine intake In addition a short review of the pharmacological and toxicological actions of caffeine is given The second and main part of the report reviews available information from epidemiological studies on the potential health hazards to the human foetus associated with parental intake during

pregnancy of caffeine and related methylxanthines in foods beverages and medicines The studied adverse effects are influence on fertility spontaneous abortion congenital malformation pre term delivery foetal growth retardation foetal behaviour and effects on neonates infants and young children The conclusion of the report demonstrates the need for limiting caffeine exposure during pregnancy The Nordic Working Group on Food Toxicology and Risk Evaluation NNT recognizes that the human exposure to caffeine and related compounds causes a spectrum of pharmacological effects for instance cardiovascular renal neurological and behavioural effects The increasing use of caffeine and related methylxanthines in various foods and beverages consumed by children and adolescents cause concern NNT recommends that a full hazard characterization of caffeine and related methylxanthines should be performed with the aim to reach a conclusion about the upper safe level of intake of these compounds
