to interact with large databases must scale to web and distributed applications Interaction with databases must employ multiple and more diversified interaction modalities such as speech and gesture in addition to visual exploitation Finally the basic elements managed in modern databases are rapidly evolving from text images sound and video to compositions and now annotations of these media thus incorporating ever higher levels and different facets of semantics In addition to visual interfaces and multimedia databases Visual and Multimedia Information Management includes research in the following areas Speech and aural interfaces to databases Visualization of web applications and database structure Annotation and retrieval of image databases Visual querying in geographical information systems Video databases and Virtual environment and modeling of complex shapes Visual and Multimedia Information Management comprises the proceedings of the sixth International Conference on Visual Database Systems which was sponsored by the International Federation for Information Processing IFIP and held in Brisbane Australia in May 2002 This volume will be essential for researchers in the field of management of visual and multimedia information as well as for industrial practitioners concerned with building IT products for managing visual and multimedia information

Virtual Worlds Jean-Claude Heudin, 2003-05-20

- 1 Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems
- 2 One of the most popular works in this field has been *Tierra* designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource
- 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space
