Elliptic Marching Methods and Domain Decomposition Patrick J. Roache, 1995-06-29. One of the first things a student of partial differential equations learns is that it is impossible to solve elliptic equations by spatial marching. This new book describes how to do exactly that, providing a powerful tool for solving problems in fluid dynamics, heat transfer, electrostatics, and other fields characterized by discretized partial differential equations. *Elliptic Marching Methods and Domain Decomposition* demonstrates how to handle numerical instabilities, i.e., limitations on the size of the problem that appear when one tries to solve these discretized equations with marching methods. The book also shows how marching methods can be superior to multigrid and pre-conditioned conjugate gradient PCG methods, particularly when used in the context of multiprocessor parallel computers. Techniques for using domain decomposition together with marching methods are detailed, clearly illustrating the benefits of these techniques for applications in engineering, applied mathematics, and the physical sciences.

Proceedings of the 21st International Symposium on High Voltage Engineering Bálint Németh, 2019-11-27. High voltage engineering is extremely important for the reliable design, safe manufacture, and operation of electric devices, equipment, and electric power systems. The 21st International Symposium on High Voltage Engineering, organized by the 90 years old Budapest School of High Voltage Engineering, provides an excellent forum to present results, advances, and discussions among engineers, researchers, and scientists and share ideas, knowledge, and expertise on high voltage engineering. The proceedings of the conference present the state of the art technology of the field. The content is simultaneously aiming to help practicing engineers to be able to implement based on the papers and researchers to link and further develop ideas.
