Object Oriented Databases With Applications To Case Networks And Vlsi Cad:

Object-oriented Databases with Applications to CASE, Networks, and VLSI CAD Rajiv Gupta, Ellis Horowitz, 1991 Object oriented has become one of the important buzzwords in computer science but as yet there is no clear consensus on what is object oriented programming This book addresses the concepts behind the buzzword and has four goals The first is to provide the reader with a perspective on concepts that have been in development in a diverse set of fields including artificial intelligence database theory programming languages and compiler theory which form the core of the object paradigm Second the text presents an overview of object oriented databases examples of their use and a comparison of strengths and weaknesses Third real world examples are shown to illustrate how they are mapped onto an object oriented framework Finally the programming language C has been adopted by programmers of object oriented databases so there is an overview of its power and limitations and two different approaches to making a database out of C are examined *Object-oriented Databases With Applications To Case, Networks, And Vlsi Cad* R. Gupta, **OOER '95 Object-Oriented and Entity-Relationship Modeling** M. Papazoglou, 1995-11-23 This volume constitutes the refereed proceedings of the 14th International Conference on Object Oriented and Entity Relationship Modelling OOER 95 held in Gold Coast Australia in December 1995 The 36 papers presented together with an invited presentation by Gio Wiederhold were selected from a total of 120 submissions The papers are organized in sections on object design and modelling models and languages reverse engineering and schema transformation behavioral modelling non traditional modelling theoretical foundations business re engineering integrated approaches cooperative work modelling temporal data modelling federated systems design and industrial stream papers **Encyclopedia of Library and Information Science** Allen Kent, 2000-01-03 Automated System for the Generation of Document Indexes to Volume Visualization Object-oriented Software for Manufacturing Systems S. Adiga, 2012-12-06 I must confess that I stumbled upon the object oriented OO world view during my explorations into the world of artificial intelligence AI in search of a new solution to the problem of building computer integrated manufacturing systems CIM In OO computing I found the constructs to model the manufacturing enterprise in terms of information a resource that is common to all activities in an organization It offered a level of modularity and the coupling binding necessary for fostering integration without placing undue restrictions on what the individual applications can do The implications of OO computing are more extensive than just being a vehicle for manufacturing applications Leaders in the field such as Brad Cox see it introducing a paradigm shift that will change our world gradually but as radically as the Industrial Revolution changed manufacturing However it must be borne in mind that simply using an object oriented language or environment does not in itself ensure success in one s applications It requires a different way of thinking design discipline techniques and tools to exploit what the technology has to offer In other words it calls for a paradigm shift as defined by Kuhn in *The Structure of Scientific Revolution* a classic text in the history of science *Object-Oriented Methodologies and Systems*

manipulation of multimedia data types will lead to tremendous growth in imaging and multimedia data in general computing environments. Multimedia and imaging applications can now provide benefits to common business applications by integrating voice, sound, images, animation, and digitized video. Ultimately, it will be possible to convert all information that is currently stored on paper, video, and film into a digitized environment. This will allow users to organize, search, and route multimedia objects over local and wide area networks in real time. The authors' introductory level presentation of this new class of data types supplies the database technology required for effective manipulation and storage. Multimedia and database experts Khoshafian and Baker aptly illustrate the ability of multimedia database systems to concurrently share access and query large collections of multimedia information. They introduce the elemental concepts of object and relational databases and then apply them to multimedia and imaging databases. Fundamental database topics discussed include querying, transaction support, recovery, security, and storage. This book provides information essential to the incorporation of multimedia databases that will improve the quantity and quality of information manipulated by computer users in many areas, including medicine, computer-aided design, and information retrieval systems.

Information and Knowledge Management Timothy W. Finin, Charles K. Nicholas, 1993-11-10. This volume contains expanded and updated versions of papers presented at CIKM 92, the First International Conference on Information and Knowledge Management held in Baltimore, Maryland, in November 1992. The conference participants came from the fields of database management, information retrieval, and artificial intelligence. A major theme in the volume is how these fields are merging and enriching each other. The eight papers discuss discovering context in a conceptual schema, a system for face information retrieval, queries in OODB systems, consistency checking in OODBs, integrity constraints, representation in OODBs, a framework for temporal object databases, inductive dependencies, and approximate databases. OODB design methodologies.

East/West Database Workshop Johann Eder, Leonid A. Kalinichenko, 2013-06-29. This volume results from the four-day scientific Second International East West Database Workshop which took place 25th-28th September 1994 in Klagenfurt, Austria, continuing a series of workshops started in Kiev in 1990. Lecture Notes in Computer Science No. 504. Springer. Next Generation Information System Technology. The aims of this workshop are twofold: first, to provide a forum for the presentation and in-depth discussion of scientific achievements in the field of advanced databases that will effectively improve the building and use of future information systems; second, to establish and increase

communication between research communities which were formerly separated and therefore had only rare opportunities to interact. It should establish contacts between researchers from the East and from the West to make exchange of ideas possible and to trigger collaborations. However, it is not only political borders which change their perviousness as a result of or giving rise to new autonomies or new possibilities for interaction and collaboration. The same happens with the borders between scientific areas in particular in the dynamically evolving areas of computer science. Databases and programming languages are integrated in object oriented databases. Database and information retrieval technology form together the basis for modern multimedia information systems. Furthermore, the borders between different information systems change and allow various forms of collaboration while maintaining different degrees of autonomy. Heterogeneous and distributed databases are enabling technologies for these systems.
