Politics Of International Environmental Management:

The Politics of International Environmental Management A. Underdal, 2012-12-06 Many of the major environmental challenges facing governments and societies today are collective problems calling for joint solutions However even when effective solutions can be found only through joint efforts international cooperation is often hard to establish and maintain This makes it all the more important to understand the conditions for success and the causes of failure This book examines some of the political mechanisms at work in the formation and operation of international environmental regimes What are the major factors that shape the national positions that governments bring to the negotiating table How do the international institutions and negotiation processes through which these preferences and positions are adjusted and aggregated affect outcomes What are the main mechanisms determining whether or not international environmental agreements are successfully implemented at the domestic level The Politics of International Environmental Management is published in cooperation with the European Science Foundation

International Environmental Treaties and State Behavior Denise DeGarmo, 2013-10-14 Despite the growing recognition of the importance of environmental issues for nation state security current research on international environmental security is insufficient Although scholars in the field of International Relations believe that there is an appropriate role for international relations theory in analyzing global environmental concerns the existing literature is predominantly descriptive or prescriptive rather than analytical This study attempts to remedy this problem by conducting an empirical analysis of nation state behavior in the international environmental realm

Japan's Environmental Politics and Governance Yasuo Takao, 2016-11-03 Environmental issues stretch across scales of geographic space and require action at multiple levels of jurisdiction including the individual level community level national level and global level Much of the scholarly work surrounding new approaches to environmental governance tends to overlook the role of sub national governments but this study examines the potential of sub national participation to make policy choices which are congruent with global strategies and national mandates This book investigates the emerging actors and new channels of Japan's environmental governance which has been taking shape within an increasingly globalized international system By analysing this important new phenomenon it sheds light on the changing nature of Japan's environmental policy and politics and shows how the links between global strategies national mandates and local action serve as an influential factor in Japan's changing structures of environmental governance Further it demonstrates that decision

making competencies are shared between actors operating at different levels and in new spheres of authority resulting from collaboration between state and non state actors It highlights a number of the problems challenges and critiques of the actors in environmental governance as well as raising new empirical and theoretical puzzles for the future study of governance over environmental and global issues Finally it concludes that changes in the tiers and new spheres of authority are leading the nation towards an environmentally stable future positioned within socio economic and political constraints Demonstrating that bridging policy gaps between local action national policy and global strategies is potentially a way of reinventing environmental policy this book will be of interest to students and scholars of Environmental Studies

Wilson, Raymond L. The Making of International Environmental Treaties Gerry Nagtzaam,2009 Gerry Nagtzaam contends that in recent decades neoliberal institutionalist scholarship on global environmental regimes has burgeoned as has constructivist scholarship on the key role played by norms in international politics In this innovative volume the author sets these interest and norm based approaches against each other in order to test their ability to illustrate why and how different environmental norms take hold in some regimes and not others The book explores why some global environmental treaties seek to preserve and protect some parts of nature from human utilization some seek to conserve certain parts of nature for human development whilst others allow the reckless exploitation of nature without accounting for the consequences It tracks the fate of these three underlying environmental norms preservation conservation and exploitation using case studies on whaling mining in Antarctica and tropical timber The book illustrates how international political battles to shape environmental regimes inevitably result in clashes between these competing environmental norms This unique study will prove a fascinating read for both academics and practitioners in the fields of international environmental politics and international environmental law
