 ground based optical telescopes of large aperture has never been higher than exists at present The benefits to be gained
 from increased aperture size however are only utilised effectively if efficient instrumentation is also available There have
 been significant improvements recently in this area particularly in detector technology and data handling as well as in
 optical design so that systems which are currently being developed have the capability of being vastly more powerful in
 terms of the efficient use of photons than those which existed only 5 years ago The rationale for the decision by Commission
