Alien Life Imagined Mark Brake,2013 Compelling account of how ideas of alien life have evolved for general readers amateur astronomers and undergraduate students studying astrobiology *Imagining Flight* A. Bowdoin Van Riper,2004 Imagining Flight is a history of the air age as the rest of us have experienced it on the pages of books the screens of movie theaters and the front pages of newspapers It focuses on the United States but also contrasts American ideas and attitudes with those of other air minded nations including Britain France Germany and Japan *Time Travel* David Wittenberg,2016-01-01 This stimulating contribution to literary theory reveals the deeply philosophical concerns and developments behind popular time travel sci fi London Review of Books In Time Travel literary theorist David Wittenberg argues that time travel fiction is not mere escapism but a narrative laboratory where theoretical questions about storytelling and by extension about the philosophy of temporality history and subjectivity are presented in story form Drawing on physics philosophy narrative theory psychoanalysis and film theory Wittenberg links innovations in time travel fiction to specific shifts in the popularization of science from nineteenth century evolutionary biology to twentieth century quantum physics and more recent multiverse cosmologies Wittenberg shows how popular awareness of new science led to surprising innovations in the literary time machine which evolved from a vehicle used for sociopolitical commentary into a psychological device capable of exploring the temporal structure and significance of subjects viewpoints and historical events Time Travel draws on classic works of science fiction by H G Wells Edward Bellamy Robert Heinlein Samuel Delany and Harlan Ellison television shows such as The Twilight Zone and Star Trek and other popular entertainments These are read alongside theoretical work ranging from Einstein Schr dinger Stephen Hawking to G rard Genette David Lewis and Gilles Deleuze Wittenberg argues that even the most mainstream audiences of popular time travel fiction and cinema are vigorously engaged with many of the same questions about temporality identity and history that concern literary theorists media and film scholars and philosophers *The Origins of Psychic Phenomena* Stan Gooch,2007-02-07 Examines unexplained phenomena in psychiatric and psychological terms rather than occult terms Explores how the unconscious mind manifests paranormal phenomena Shows how the cerebellum the seat of the unconscious is the source of these energies subpersonalities and manifestations Identifies our neglected Neanderthal subconscious as responsible for the rising incidence of paranormal happenings Alien abduction poltergeist attacks incubi succubi split and multiple personalities possessions precognition spontaneous combustion the list of phenomena not just unexplained but ignored by mainstream

science seems endless Yet the key to the origin of all these manifestations lies deep within our own brains In *The Origins of Psychic Phenomena* Stan Gooch explores the functioning of the dream producing part of the brain the cerebellum and how the unconscious mind is able to externalize itself The cerebellum is the physical seat of the unconscious and was once equal to or even superior to the cerebrum as essential to our functioning In modern times it has been shunted into the subliminal yet the cerebellum continues to process our worldly experiences and reveals its concerns in misunderstood often frightening manifestations Gooch explains that Neanderthal Man possessed a much larger cerebellum than Cro Magnon Man and posits that the modern repression of the cerebellum s role in our consciousness has given rise to these supernatural phenomena

How to Do Things with Fictions Joshua Landy, 2012-07-06 Why does Mark s Jesus speak in parables Why does Plato s Socrates make bad arguments Why are Beckett s novels so inscrutable And why don t stage magicians even pretend to summon spirits anymore In a series of captivating chapters on Mark Plato Beckett Mallarm and Chaucer Joshua Landy not only answers these questions but explains why they are worth asking in the first place Witty and approachable *How to Do Things with Fictions* challenges the widespread assumption that literary texts must be informative or morally improving in order to be of any real benefit It reveals that authors are sometimes best thought of not as entertainers or as educators but as personal trainers of the brain putting their willing readers through exercises designed to fortify specific mental capacities from form giving to equanimity from reason to faith Delivering plenty of surprises along the way that moral readings of literature can be positively dangerous that the parables were deliberately designed to be misunderstood that Plato knowingly sets his main character up for a fall that metaphor is powerfully connected to religious faith that we can sustain our beliefs even when we suspect them to be illusions *How to Do Things with Fictions* convincingly shows that our best allies in the struggle for more rigorous thinking deeper faith richer experience and greater peace of mind may well be the imaginative writings sitting on our shelves

Science Fiction: A Critical Guide Patrick Parrinder, 2021-05-18 This book first published in 1979 presents a portrait of science fiction as a distinct form of serious and creative literature Contributors are drawn from Britain America and Europe and range from well known academic critics to young novelists The essays establish the common properties of science fiction writing and assess the history and significance of a field in which critical judgements have often been unreliable The material ranges from the earliest imaginative journeys to the moon to later developments of British American and European science fiction

Twenty-Five Astronomical Observations That Changed the World Michael Marett-Crosby, 2013-06-28 *Twenty Five Astronomical Observations That Changed the World* takes twenty five journeys through space back in time and into human history We begin with the simplest sight of the Tycho Crater on the Moon through a repeat of Galileo s observations of Jupiter s moons and then move out towards the nebulae stars and galaxies The astronomical observations repeat the original groundbreaking discoveries that have changed our understanding of science and ourselves This title contains graded observing challenges from the straightforward to the more difficult in chapter order

It offers clear observing tips and lots of practical help presuming no prior in depth knowledge of equipment Binoculars and or a small astronomical telescope are all that is required for most of the observations Secondly it explores for each observation the science of what is seen adding to the knowledge and enjoyment of amateur astronomers and offering lots of reading for the cloudy nights when there is not a star in view Thirdly the book puts the amateur astronomers observations into a wider perspective Twenty Five Astronomical Observations That Changed the World makes the observer part of that great story of discovery Each chapter each observing challenge shows how to observe and then how to look with understanding The projects begin with practicalities where the object is how best is it observed and with what appropriate equipment usually a small to medium aperture amateur telescope binoculars even the naked eye Twenty Five Astronomical Observations that Changed the World guides even the inexperienced amateur astronomer beginners can use the book around a variety of night sky objects and reminds the more experienced how they can best be seen These practical observations put us in contact with all the history and culture surrounding them through scientific speculation and literature to those first fuzzy images made in 1959 by the Russian space probe Luna 3

Love and Death in Kubrick Patrick Webster,2014-01-10 The films of Stanley Kubrick have left an indelible mark on the history of American cinema This text explores the auteur s legacy specifically positioning his body of work within the context of cultural theory A single chapter is devoted to each of Kubrick s seven films Lolita Dr Strangelove 2001 A Space Odyssey A Clockwork Orange The Shining Full Metal Jacket and Eyes Wide Shut Particular attention is paid to the role of love and death in Kubrick s films emphasizing his innovative exploration of love and sex and the portrayal of mortality via masculine violence

Blockbuster Science David Siegel Bernstein,2017 If you ve ever wondered how much real science goes into movies like Gravity novels like The Martian and television shows like Dr Who this is the book for you Written by an author who is both a data scientist and a science fiction writer this entertaining science primer provides lucid jargon free explanations of key scientific principles while referencing well known science fiction books movies and TV shows The reader learns about relativity through Orson Scott Card s Ender s Gameand the movie Interstellar black holes and wormholes in connection with Contactand Planet of the Apes theories about the origin of life as reflected in Battlestar Galactica Star Trek The Next Generation and The Hitchhiker s Guide to the Galaxy computer science and artificial intelligence in reference to A I Artificial Intelligence and much much more Written with wit clarity and a great sense of fun Blockbuster Science will inspire science fiction fans to get excited about real science while also putting an engaging pop culture spin on science for any curious reader

Earths of Distant Suns Michael Carroll,2016-10-03 Based on the latest missions results and supported by commissioned artwork this book explores the possible lessons we may learn from exoplanets As the number of known Earth like objects grows significantly the author explores what is known about the growing roster of pale blue dots far afield Aided by an increased sensitivity of the existing observatories recent discoveries by

Keck the Hubble Space Telescope and Kepler are examined These findings once thought to be closer to the realm of science fiction have fired the imaginations of the general public as well as scientists All of us are mesmerized by the possibility of other Earth like worlds out there Author Michael Carroll asks the tough questions of what the expected gain is from identifying these Earth analogs spread across the Universe and the reasons for studying them Potentially they could teach us about our own climate and Solar System Also explored are the more remote options of communication between or even travel to these distant yet perhaps not so dissimilar worlds
