Introducing the Human Genome

The Human Genome

The Human Genome Project (HGP) is an international scientific research project with the goal of determining the sequence of the human genome. The project is a collaborative effort between scientists from many different countries and disciplines. The project is funded by the National Institutes of Health (NIH) and the Human Genome Foundation (HGF). The project is expected to be completed by the year 2003.

Project Objectives

The Human Genome Project has four main objectives: to determine the sequence of the human genome, to identify all the genes in the human genome, to map the location of the genes on the chromosomes, and to understand the function of the genes. The project is expected to have a major impact on the field of genetics and on the development of new medical treatments.

personal reports have included a 10-day charter boat (Phase I) in which guests provide information for a single subject and a 30-day charter boat (Phase II) in which an integrated navigation and support system was demonstrated with four subjects in a closed charter boat. The Life Support Systems Integration Facility, was also used during Phase II. It was a 10-day demonstration of the system technology. The integrated system is a water recovery system, intended for use on the International Space Station (ISS) (2001-2002). The system, including and medical support personnel from the Medical Science Division, is the Canadian Space Agency (CSA), who is also involved in the project.
