Representation Theory Of Artin Algebras:

Representation Theory of Artin Algebras Maurice Auslander, Idun Reiten, Sverre O. Smalø, 1997-08-21 This book is an introduction to the contemporary representation theory of Artin algebras by three very distinguished practitioners in the field. Beyond assuming some first year graduate algebra and basic homological algebra the presentation is entirely self contained so the book is suitable for any mathematicians especially graduate students wanting an introduction to this active field. Written in a clear comprehensive style with full proofs. It can very well serve as an excellent reference as well as a textbook for graduate students. EMS Newsletter

An Introduction to the Representation Theory of Artin Algebras Idun Reiten, 1983 Representation Theory of Algebras Raymundo Bautista, Roberto Martínez-Villa, José Antonio de la Peña, 1996 Addressed to graduate students and research mathematicians interested in associative rings and algebras. Representation Theory I V. Dlab, P. Gabriel, 2006-11-15 Elements of the Representation Theory of Associative Algebras: Techniques of representation theory Ibrahim Assem, Daniel Simson, Andrzej Skowroński, 2006 Publisher Description: unedited publisher data. Counter This first part of a two volume set offers a modern account of the representation theory of finite dimensional associative algebras over an algebraically closed field. The authors present this topic from the perspective of linear representations of finite oriented graphs, quivers and homological algebra. The self contained treatment constitutes an elementary up to date introduction to the subject using on the one hand quiver theoretical techniques and on the other tilting theory and integral quadratic forms. Key features include many illustrative examples plus a large number of end of chapter exercises. The detailed proofs make this work suitable both for courses and seminars and for self study. The volume

will be of great interest to graduate students beginning research in the representation theory of algebras and to mathematicians from other fields

Homological Methods, Representation Theory, and Cluster Algebras

Ibrahim Assem, Sonia Trepode, 2018-04-18 This text presents six mini courses all devoted to interactions between representation theory of algebras homological algebra and the new ever expanding theory of cluster algebras The interplay between the topics discussed in this text will continue to grow and this collection of courses stands as a partial testimony to this new development The courses are useful for any mathematician who would like to learn more about this rapidly developing field the primary aim is to engage graduate students and young researchers Prerequisites include knowledge of some noncommutative algebra or homological algebra Homological algebra has always been considered as one of the main tools in the study of finite dimensional algebras The strong relationship with cluster algebras is more recent and has quickly established itself as one of the important highlights of today's mathematical landscape This connection has been fruitful to both areas representation theory provides a categorification of cluster algebras while the study of cluster algebras provides representation theory with new objects of study The six mini courses comprising this text were delivered March 7 18 2016 at a CIMPA Centre International de Mathématiques Pures et Appliquées research school held at the Universidad Nacional de Mar del Plata Argentina This research school was dedicated to the founder of the Argentinian research group in representation theory M I Platzeck The courses held were Advanced homological algebra Introduction to the representation theory of algebras Auslander Reiten theory for algebras of infinite representation type Cluster algebras arising from surfaces Cluster tilted algebras Cluster characters Introduction to K theory Brauer graph algebras and applications to cluster algebras
