Presence in the Modern World Jacques Ellul, 2017-09-28 Presence in the Modern World is Jacques Ellul's most foundational book combining his social analysis with his theological orientation. Appearing first in French in 1948 and later in English as *The Presence of the Kingdom*, it has reached the status of a classic that retains all of its relevance dealing with today's challenges. How should we respond to such complex forces as technology or the state? How can we communicate with one another despite the problems inner to modern forms of media? Do we have hope for the future of our civilisation? Ellul responds by describing how a Christian's unique presence in the world can make a difference. Instead of acting as sociological beings, we must commit ourselves to the kind of revolution that will occur only when we become radically aware of our present situation and undertake a ferocious and passionate destruction of myths. In this way, states Ellul, we become the medium for God's action in the modern world. *Hope in the Thought of Jacques Ellul* Lawrence J. Terlizzese, 2005-10-30 Hope expresses more than an area of concentration in Ellul's thought; it is the central idea that binds his disparate elements together. Ellul believed that at this moment of history, the world since 1945, hope must preoccupy our thinking and lives. To understand hope, we must first comprehend its absence. This entails discerning what causes the absence of hope, namely the world's embrace of technique and the abandonment of God. Ellul also rejected these as a positive affirmation. He wanted to make a firm distinction between reality and truth. He affirmed modern abandonment as a realistic fact as an accurate analysis of the present condition, not as an affirmation of the truth. Hope is truth in Jesus Christ, but truth must be asserted against these harsh facts. He used facts to incite hope in believers to shake their complacency and to realize their actual condition in the world. The idea of hope in the thought of Jacques Ellul can only be properly understood in light of dialectic struggle between negatives which amount to factual representations of the modern world and positives through which hope exerts itself in the face of these facts. From this tension will issue personal resolve. Technique has brought the world to great collective heights and achievements, but this has come at the expense of personal ends and meaning. Ellul attempted to bridge this gap by asserting individual meaning against the aggregated progress of technique without destroying the gains made by collective advance. This represents the central dilemma in Ellul's thought: how does one maintain meaning and personal aims in a world founded on corporate necessity? from the Introduction *Australian National Bibliography: 1992* National Library of Australia, 1988 **Directions**, 1991 *Politics of Security* Michael Dillon, 2002-01-31 In this critique of security studies with insights into the thinking of Heidegger, Foucault, Derrida, Levinas, and Arendt, Michael Dillon contributes to the rethinking of some of the fundamentals of international politics, developing what might be called a political philosophy of continental thought. Drawing on the work of Martin Heidegger, *Politics of Security* establishes the relationship between Heidegger's radical hermeneutical phenomenology and politics and the fundamental link between politics, the tragic, and the ethical. It breaks new ground by providing an etymology of security, tracing the word back to the Greek *asphaleia*, not to trip.

up or fall down and a unique political reading of Oedipus Rex Michael Dillon traces the roots of desire for security to the metaphysical desire for certitude and points out that our way of seeking that security is embedded in 20th century technology thus resulting in a global crisis Politics of Security will be invaluable to both political theorists and philosophers and to anyone concerned with international relations continental philosophy or the work of Martin Heidegger **From Ethical Review to Responsible Research and Innovation** Sophie Pellé, Bernard Reber, 2016-06-13 The scientific and technological upheavals of the 20th Century and the questions and difficulties that went along with them climate change nuclear energy GMO etc have increased the necessity of thinking about and formalizing technoscientific progress and its consequences Expert evaluations and ethics committees today cannot be the only legitimate sources for understanding the social acceptability and desirability of this progress Responsibility must be shared out on a wider scale as much in society as in the process of research and innovation projects This book presents the main works of Responsible Research and Innovation RRI from a moral responsibility point of view for which it calls upon no fewer than 10 understandings to bring out those which are positive and to support an interpretive and combinatory pluralism In this sense it demonstrates moral innovation It analyzes numerous cases and proposes perspectives that are rarely discussed in this emerging field current practices of ethical evaluation concerns of the integrity of research means for participatory technological evaluation etc It contributes to the pledges of RRI which largely remains theoretically undetermined even though it reorganizes the relationships between science innovation and society *Posthuman Personhood* Daryl J. Wennemann, 2013-05-02 Posthuman Personhood takes up the ethical challenge posed by Francis Fukuyama's work Our Posthuman Future Daryl J Wennemann argues that the traditional concept of personhood may be fruitfully applied to the ethical challenge we face in a posthuman age He draws upon Wilfrid Sellars treatment of the concept of a person within the manifest image of man in the world Sellars proposed that we develop a stereoscopic view of reality that includes both a scientific understanding of the world and a meaningful place for persons living and acting in the world Following Mary Anne Warren Wennemann develops a distinction between two meanings of the term human a biological meaning and a moral meaning and maintains that all biologically human beings are persons But it is not necessarily the case that all persons must be biologically human After drawing on a contemporary version of Kant's distinction between a theoretical possibility and a real possibility the book posits that biologically non human persons like robots computers or aliens are a theoretical possibility but that we do not know if they are a real possibility Finally Wennemann describes an ethic of self limitation for the posthuman age **The Iraqi Aggression Against Kuwait** Wolfgang F. Danspeckgruber, Charles Tripp, 2019-07-11 The war for the liberation of Kuwait following the Iraqi invasion in 1990 rekindled the international community's geopolitical interest in the Gulf and helped define a new regional order This book analyzes the political strategic and economic dimensions of the second Gulf War with particular focus on military aspects An international roster of experts treats issues of strategy weapons technology

arms transfers and the impact on the Arab state system Of special interest is the exploration of the implications of the war for Japan Germany Russia and Europe *The Ethical Challenge of Auschwitz and Hiroshima* Darrell J. Fasching,1993-07-01 This book addresses the problem of religion ethics and public policy in a global technological civilization It attempts to do what narrative ethicists have said cannot be done to construct a cross cultural ethic of human dignity human rights and human liberation which respects the diversity of narrative traditions It seeks to do this without succumbing to either ethical relativism or ethical absolutism The author confronts directly the dominant narrative of our technological civilization the Janus faced myths of Apocalypse or Utopia Through this myth we view technology ambivalently as both the object of our dread and the source of our hope The myth thus renders us ethically impotent the very strength of our literal utopian euphoria sends us careening toward some literal apocalyptic final solution The demonic narrative that dominated Auschwitz killing in order to heal is part of this Janus faced technological mythos that emerged out of Hiroshima And it is this mythic narrative which underlies and structures much of public policy in our nuclear age This book proposes a coalition of members of holy communities and secular groups organized to prevent any future eruptions of the demonic Its goal is to construct a bridge not only over the abyss between religions East and West but also between religious and secular ethics *Shifting Contexts* Marilyn Strathern,2012-09-10 To suppose anthropological analysis can shift between global and local perspectives may well imply that the two co exist as broader and narrower horizons or contexts of knowledge The proof for this can be found in ethnographic accounts where contrasts are repeatedly drawn between the encompassing realm and everyday life or in value systems which simultaneously trivialise and aggrandise or in shifts between what pertains to the general or to the particular *Resources in Education* ,1994-04

**Ways to Study and Research Urban, Architectural and Technical Design** T.M. de Jong,D.J.M. van der Voordt,2002 How can we develop a scientific basis for architectural urban and technical design When can a design be labelled as scientific output comparable with a scientific report What are the similarities and dis similarities between design and empirical research and between design research typological research design study and study by design Is there a need for a particular methodology for design driven study and research With these questions in mind more than forty members of the Faculty of Architecture of the Delft University of Technology have described their ways of study and research Each chapter shows the objectives the methodology and its implementation in search for a deeper knowledge of design processes and an optimal quality of the design itself The authors among them architects urban planners social scientists lawyers technicians and information scientists have widely differing backgrounds Nevertheless they share a great deal The central focus is a better understanding of design processes design tools and the effects of design interventions on issues such as utility aesthetics meaning sustainability and feasibility Handbook of Science and Technology Studies Sheila Jasanoff,Gerald E Markle,James C Peterson,Trevor Pinch,2001-11-01 This volume represents the social constructivist turn of the field It is evident that social constructivism made a major impact on the field during the 1970s and 1980s The

diverse papers included here highlight the role of ethnography in STS In addition we are exposed to new perspectives of the multicultural and gendered nature of knowledge production Science Technology and Society For the most current comprehensive resource in this rapidly evolving field look no further than the Revised Edition of the Handbook of Science and Technology Studies This masterful volume is the first resource in more than 15 years to define summarize and synthesize this complex multidisciplinary international field Tightly edited with contributions by an internationally recognized team of leading scholars this volume addresses the crucial contemporary issues both traditional and nonconventional social studies political studies and humanistic studies in this changing field Containing theoretical essays extensive literature reviews and detailed case studies this remarkable volume clearly sets the standard for the field It does nothing less than establish itself as the benchmark one that will carry the field well into the next century The long awaited Handbook of Science and Technology Studies sponsored by the Society for Social Studies of Science is a truly substantial work both in size and in the breadth of its many contributions It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies In the editors words it is an unconventional but arresting atlas of the field at a particular moment in its history Science Technology Society This book is not only an important resource for practitioners but it also may help to spark the curiosity of those who are outside the field including scientists and engineers themselves and so pull the half seen world of science and technology studies even more fully into the light of day American Scientist The book as a whole is an impressive testimony to the vitality of a burgeoning field New Scientist It reflects the international and interdisciplinary nature of the society An excellent resource Choice

**The Complexity Challenge** Robert W. Rycroft, Don E. Kash, 1999 This book investigates the fundamental rethinking required by the transition to a production system whose guiding intelligence is self organizing networks Utilizing an exploding literature in the science of complexity and evolutionary economics plus six detailed case studies of complex technologies that have experienced repeated innovation this study identifies distinct innovation patterns and explores what happens when changes in these patterns occur This volume also identifies the conditions that signal the approach of such changes and investigates the appropriate strategy and policy responses used to deal with them
