conservation allowing us to protect critical habitats and migratory corridors The book progresses by first introducing sea turtle biology and then delving into their sensory world focusing on magnetic olfactory and visual cues It then analyzes tracking data to understand long distance migration and homing behavior A unique aspect of the book is its analysis of large scale satellite tracking data collected over decades It connects marine biology with ecology and oceanography providing a holistic view Ultimately *Turtles Return Home* argues that sea turtle navigation is a multi sensory process that requires a comprehensive approach for conservation It highlights how factors like climate change and habitat degradation disrupt natural cues impacting their ability to navigate By bridging scientific rigor with accessible language the book appeals to students researchers and anyone interested in marine life and environmental science Sea Turtles James R.
