Making Babies: Biomedical Technologies, Reproductive Ethics, and Public Policy Inmaculada de Melo-Martín, 2013-03-09

Each year roughly a million new cases of cancer appear in the US and more than 500 000 Americans die annually of premature death Although medical progress has slowed cancer mortality its incidence is increasing roughly six times faster than cancer mortality is decreasing Breast cancer in particular has been increasing about one percent each year since 1973 At least two of the factors responsible for this surge in breast cancer are women s use of medically prescribed synthetic hormones and the exposure of the entire population to chemicals such as dioxin Both exposures increase the likelihood of breast cancer Although many ethicists worry about involuntary societal imposition of chemicals such as dioxin through industrial and agricultural processes allegedly voluntary exposures also constitute both a public health problem and a biomedical ethics difficulty Physicians recommend synthetic hormones for example to women who apparently take them voluntarily In the case of in vitro fertilization doctors prescribe hormones to induce egg production and to increase the chances of reproduction for couples who are unable to have children Despite the benefits of medical technologies such as hormone stimulation and in vitro fertilization they also carry great risks The price that childless women pay for their opportunity to have children through in vitro fertilization may be their own increased risk of diseases such as breast cancer that are hormone dependent

The Promise and Peril of CRISPR Neal

Baer, 2024-07-02 A timely collection of essays on the pressing possibilities and risks of gene editing technology Scientists and genetic engineers are becoming increasingly adept at editing the human genome How far can and should they go in editing future generations In The Promise and Peril of CRISPR editor Neal Baer brings together a timely collection of essays by influential bioethicists philosophers and geneticists to explore the moral ethical and policy challenges posed by CRISPR technology We are at a technological and ethical crossroads in grappling with the impacts of genetic editing Gene editing technology holds the promise of curing more than 7 000 known genetic diseases Yet with that promise comes the peril of using CRISPR to edit the human genome which could not only lead to manipulating human evolution but also to creating and releasing pathogens capable of wreaking havoc on human animal and plant life Although CRISPR has already cured several

genetic diseases it could also be used to design biological weapons or to edit the embryos of people who can afford to purchase genetic enhancements for their children What role can and should the public play in discussing the far reaching implications of gene editing What oversights should be put in place to prevent a rogue scientist from engineering another baby as was recently done with twins in China Essay contributors offer informed predictions and guidelines for how the uses of CRISPR today will affect life in the future Decisions we make now may have unpredictable consequences for future generations For anyone concerned about the uses and potential abuses of gene editing these essays provide a critical and comprehensive discussion of the central issues surrounding CRISPR technology Contributors Florence Ashley R Alta Charo Marcy Darnovsky Kevin Doxzen Rosemarie Garland Thomson Gigi Kwik Gronvall Jodi Halpern Katie Hasson Andrew C Heinrich Jacqueline Humphries J Benjamin Hurlbut Ellen D Jorgensen Peter F R Mills Carol Padden Marcus Schultz Bergin Robert Sparrow Sandra Sufian Krystal Tsosie Ethan Weiss Rachel M West
