King,Geneviève Albouy,Julien Doyon,2017-05-25 Both the acquisition of new and the modification of previously acquired motor skills are necessary to achieve optimal levels of motor performance in everyday functioning as well as to attain expert performance levels that are evident in sports and arts A multitude of factors have been shown to influence the various stages of the learning process from the acquisition i e motor memory encoding to the consolidation and subsequent retention of a skill These factors or modulators can affect learning through online processes taking place during practice of a new motor skill or through offline processes occurring in the absence of task performance i e after training sessions Although much of the recent research from various disciplines has placed an increased emphasis on identifying factors that can influence the motor learning process we lack an integrated understanding of online and offline determinants of motor skill behaviours Potential motor learning modulators include but are certainly not limited to stress anxiety attention executive functioning social interaction stimulus response mapping training schedule regimen learning environment vigilance consciousness states including sleep wakefulness or meditation brain stimulation interference as well as resting state brain connectivity Pathological and non pathological i e development or aging changes in the brain can also be conceptualized as potential modulators The aim of this Research Topic is to bridge research from the cognitive sensory motor and psychological domains using various behavioural paradigms and neuroimaging techniques in order to provide a comprehensive view of the online and offline modulators of motor learning and how they interact to influence motor performance Critically the overarching goal is to gain a better understanding of how motor behaviour can be optimized We believe that merging research from diverse neuroscientific communities would contribute to fulfilling this goal and potentially highlight possible shared neurophysiological mechanisms influencing motor learning From the Stage to the Studio Cornelia Watkins,Laurie Scott,2023 An expanded updated and improved second edition of an essential book for aspiring teacher musicians Whether serving on the faculty at a university maintaining a class of private students or fulfilling an invitation as guest artist in a master class series virtually all musicians will teach during their careers From the Stage to the Studio speaks directly to the performing musician highlighting the significant advantages of becoming distinguished both as a performer and a pedagogue Drawing on over sixty years of combined experience authors Cornelia Watkins and Laurie Scott provide the guidance and information necessary for any musician to translate their individual approach into productive and rewarding teacher student interactions Premised on the synergistic relationship between teaching and performing this book provides a structure for clarifying the essential elements of musical artistry and connects them to such tangible situations as setting up a studio

The Structure of Conscious Experience Lee Roy Beach,2019-08-15

There must exist a point at which the molecular and electro chemical processes that comprise brain function are transformed into rich orderly conscious experience which seamlessly blends the present moment what led up to it and what will follow it This is the stuff of our everyday lives and it raises questions about its organization and how that organization facilitates engagement with the world at large In short what is the structure of conscious experience and what is gained by it being structured that way This book argues that the structure is what is familiarly known as narrative form and that the gain is the ability to communicate about one s experience with oneself and others as well as to make informed predictions about what will happen in the fundamentally unknowable and potentially dangerous future In the latter case because the essence of narrative form is time and causality structuring events from memory the past and from perception the present in narrative form causally implies future events expectations The potential threat the bad or the absence of good of these expected future events can be assessed and if required action can be taken to prevent their occurrence or to diminish their impact The implications about thinking and action and about who we are as individuals are also discussed here

Choice Over Time

George Loewenstein,Jon Elster,1992-10-27 Many of our most urgent national problems suggest a widespread lack of concern for the future Alarming economic conditions such as low national savings rates declining corporate investment in long term capital projects and ballooning private and public debt are matched by such social ills as diminished educational achievement environmental degradation and high rates of infant mortality crime and teenage pregnancy At the heart of all these troubles lies an important behavioral phenomenon in the role of consumer manager voter student or parent many Americans choose inferior but immediate rewards over greater long term benefits Choice Over Time offers a rich sampling of original research on intertemporal choice how and why people decide between immediate and delayed consequences from a broad range of theoretical and methodological perspectives in philosophy political science psychology and economics George Loewenstein

Jon Elster and their distinguished colleagues review existing theories and forge new approaches to understanding significant questions Why do people seem to discount future benefits Do individuals use the same decision making strategy in all aspects of their lives What part is played by situational factors such as the certainty of delayed consequences How are decisions affected by personal factors such as willpower and taste In addressing these issues the contributors to Choice Over Time address many social economic psychological and personal time problems Their work demonstrates the predictive power of short term preferences in behavior as varied as addiction and phobia the effect of prices on consumption and the dramatic rise in debt and decline in savings Choice Over Time provides an essential source for the most recent research and theory on intertemporal choice offering new models for time preference patterns and their aberrations and presenting a diversity of potential solutions to the problem of temporal myopia
