Megascience And Its Background:

Megascience and Its Background Organisation for Economic Co-operation and Development, 1993 On cover title page Megascience the OECD forum **Global Mega-Science** David P. Baker, Justin J.W. Powell, 2024-04-23 Never has the world been as rich in scientific knowledge as it is today But what are its main sources In accessible and engaging fashion Global Mega Science examines the origins of this unprecedented growth of knowledge production over the past hundred and twenty years David P Baker and Justin J W Powell integrate sociological and historical approaches with unique scientometric data to argue that at the heart of this phenomenon is the unparalleled cultural success of universities and their connection to science the university science model Considering why science is so deeply linked to higher educational development the authors analyze the accumulation of capacity to produce research and demonstrate how the university facilitates the emerging knowledge society The age of global mega science was built on the symbiotic relationship between higher education and science especially the worldwide research collaborations among networked university based scientists These relationships are key for scholars and citizens to understand the past future and sustainability of science Operational Oceanography H.W.A. Behrens, J.C. Borst, J.P. van der Meulen, L.J. Droppert, J.H. Stel, 1997-12-12 GOOS is an international programme for a permanent global framework of observations modelling and analysis of ocean variables which are needed to support operational services around the world The EuroGOOS strategy has two streams the first is to improve the quality of marine information in European home waters and the second is to collaborate with similar organisations in other continents to create a new global ocean observing and modelling system that will provide the open ocean forecasts needed to achieve the best possible performance by local marine information services everywhere The EuroGOOS strategy envisages our national agencies making a major contribution to that challenging task of globalizing ocean forecasting The conference also provided an opportunity to take stock of the state of marine science and technology in Europe relevant to the EuroGOOS strategy and the state of information services and customer needs *Legitimizing ESS* Thomas Kaiserfeld, Tom O'Dell, 2015-01-01 Big Science is a broad epithet that can be associated with research projects that involve huge budgets big facilities complex instrumentation years of planning and large multidisciplinary teams of researchers Legitimizing the ESS examines the complexity of the cultural social and political processes from which and in which Big Science develops by focusing on the planning and development of the European Spallation Source ESS that is to be located in Lund in southern Sweden Together the chapters represent a variety of perspectives to highlight the complexity of the processes that are integral to Big Science Thus this volume examines the very different roles Big Science may be given in different contexts locally regionally nationally internationally as well as historically **Bits of Power** National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Committee on Issues in the Transborder Flow of Scientific Data, 1997-08-07 Since Galileo corresponded with Kepler the community of scientists has become increasingly

international A DNA sequence is as significant to a researcher in Novosibirsk as it is to one in Pasadena And with the advent of electronic communications technology these experts can share information within minutes What are the consequences when more bits of scientific data cross more national borders and do it more swiftly than ever before Bits of Power assesses the state of international exchange of data in the natural sciences identifying strengths weaknesses and challenges The committee makes recommendations about access to scientific data derived from public funding The volume examines Trends in the electronic transfer and management of scientific data Pressure toward commercialization of scientific data including the economic aspects of government dissemination of the data The implications of proposed changes to intellectual property laws and the role of scientists in shaping legislative and legal solutions Improving access to scientific data by and from the developing world Bits of Power explores how these issues have been addressed in the European Community and includes examples of successful data transfer activities in the natural sciences The book will be of interest to scientists and scientific data managers as well as intellectual property rights attorneys legislators government agencies and international organizations concerned about the electronic flow of scientific data *International partnerships in large science projects.*

,1995 Over the past several decades the federal government has supported a wide range of research projects in science and technology Federal support has been crucial to many of the most important research and development R D achievements in defense space energy environmental and other science and technology programs Recently however federal budget deficits and concerns about the effectiveness of research efforts have intensified pressures on government R D spending making it difficult to sustain many ongoing efforts and limiting opportunities for new ventures These pressures coupled with the increasingly international character of science and technology R D activities have focused greater attention on bilateral and multilateral collaborative arrangements particularly for large scale long term projects in areas such as particle physics energy and environmental science and space The United States has pursued international collaborative projects in R D to raise the likelihood of scientific success for particularly complex endeavors to take greater advantage of international scientific expertise and facilities to address science and technology issues that have global implications to extend national scientific capabilities and especially for very large science projects to share costs and risks with other nations International collaboration however poses special challenges such as establishing R D priorities within and across different scientific disciplines developing funding and planning mechanisms that ensure the long term stability of projects and maintaining U S economic and national security interests *International Partnerships in Large Science Projects* Joanne Sedor,1998-04

Large Facilities In Physic - Proceedings Of The 5th Eps International Conference On Large Facilities Herwig Schopper, Maurice Jacob, 1995-05-04 Physics research relies increasingly on the use of large facilities The construction and operation of these facilities represent an increasing fraction of the funding for research The most often calls for international collaborations Since large facilities are now of great importance in all domains of physics it is instructive to consider them in parallel This is what is done in this book which puts emphasis on large physics facilities in Europe whilst taking a worldwide perspective

Technological Innovation, Globalization and the Cold War Wolfgang Mueller, Peter Svik, 2022-11-24 This volume focuses on the interconnections between the Cold War technological innovation and globalization Although the consequences of globalization have received ample attention in both academia and the public discourse only limited attention has so far been given to the factors that instigated various waves of this process This holds particularly true for the period following World War II during which a struggle between the two global blocs fanned not only technological innovations but also their transfer This volume is dedicated to examining the links between the Cold War and this phase in the history of globalization a phase that gradually made the world despite high levels of international tension more and more inter related More specifically it anchors a very contemporary phenomenon to its historical context and pinpoints how the varied and multi layered East West interactions helped to induce and foster the globalization processes Emphasizing technology and its cross bloc flows as well as several levels of actors including states private companies and individuals this volume reflects an important shift towards transnationalism which has occurred in the historiography in the recent years This book will be of interest to students of Cold War Studies science and technology studies and International Relations
