Advanced Topics in Mass Transfer Mohamed El-Amin, 2011-02-21 This book introduces a number of selected advanced topics in mass transfer phenomenon and covers its theoretical numerical modeling and experimental aspects The 26 chapters of this book are divided into five parts The first is devoted to the study of some problems of mass transfer in microchannels turbulence waves and plasma while chapters regarding mass transfer with hydro magnetohydro and electro dynamics are collected in the second part The third part deals with mass transfer in food such as rice cheese fruits and vegetables and the fourth focuses on mass transfer in some large scale applications such as geomorphologic studies The last part introduces several issues of combined heat and mass transfer phenomena The book can be considered as a rich reference for researchers and engineers working in the field of mass transfer and its related topics Kirk-Othmer Encyclopedia of

Chemical Technology, Volume 2 Kirk-Othmer, 2004-01-27 The fifth edition of the Kirk Othmer Encyclopedia of Chemical Technology builds upon the solid foundation of the previous editions which have proven to be a mainstay for chemists biochemists and engineers at academic industrial and government institutions since publication of the first edition in 1949 The new edition includes necessary adjustments and modernisation of the content to reflect changes and developments in chemical technology Presenting a wide scope of articles on chemical substances properties manufacturing and uses on industrial processes unit operations in chemical engineering and on fundamentals and scientific subjects related to the field The Encyclopedia describes established technology along with cutting edge topics of interest in the wide field of chemical technology whilst uniquely providing the necessary perspective and insight into pertinent aspects rather than merely presenting information Set begins publication in March 2004 Over 1000 articles in 27 volumes More than 600 new or updated articles Reviews from the previous edition The most indispensable reference in the English language on all aspects of chemical technology the best reference of its kind Chemical Engineering News 1992 Overall ECT is well written and cleanly edited and no library claiming to be a useful resource for chemical engineering professionals should be without it Nicholas Basta Chemical Engineering December 1992 **Proceedings of the 5th International Symposium Honoring**

Wacker,Walter Zulehner,2012-12-06 The Fourth ECMI Conference on Industrial Mathematics took place at Strobl in Austria May 29 June 2 1989 The conference was devoted to the exchange of ideas models and methods from various fields of industrial applications of mathematics About 140 people from 21 countries attended the meeting The aim was to bring together people from industry and from university In this respect the organizers were only partly successful The participation of about 20 people from industry shows that there is still much work to be done to increase the acceptance from this side 72 speakers presented their results as invited or contributed lectures or in the frame of 2 minisymposia One minisymposium was organized by Heinz W Engl and focused on steel processing the other one organized by Hansjorg Wacker dealt with chemical engineering These proceedings consist of 56 papers The articles within each of the sections Invited Lectures Minisymposium Steel Processing Minisymposium Chemical Engineering and Contributed Lectures are in alphabetical order of the first author Except for the contributions to the minisymposia which clearly concentrate on the corresponding topics it is hard to find a reasonable classification of the papers This we believe is typical for industrial mathematics and underlines the vast variety of fields where mathematics could be used to support problem solving We would like to acknowledge the valuable work of the referees of the articles who certainly helped to improve the quality of this volume *Advanced Processing of Metals and Materials: Legal, management and environmental issues* Florian Kongoli,Ramana G. Reddy,2006 **International Symposium on Metallurgical Processes for the Year 2000 and Beyond** , *Topical Themes in Energy and Resources* Yasumitsu Tanaka,Michael Norton,Yu-You Li,2015-01-30 This book combines issues several critical ones in the energy field low energy technologies renewable energies such as the hydrogen economy and geothermal energy Moving towards a more sustainable world requires a complete revolution in the way we manage energy and resources However from an academic perspective this theme is so broad that most educators and researchers tend to focus on just one aspect and maintaining the broad viewpoint which is necessary for making strategic judgments becomes difficult Tohoku University addressed this challenge when developing a new education and training program for environmental leaders and brought together the extensive range of expertise available in specific fields into one special course which forms the basis of this book Now in one volume both students and educators can be brought up to date on a wide range of critical issues currently being addressed in the field of energy and resources Chapters on resources include availability for instance rare earth metals extraction and recycling of

metals and plastics and technological solutions to specific waste disposal problems In addition broader strategic issues such as limits to growth and the interaction between the economic system and environmental issues are addressed Even though each chapter provides topical data and knowledge from disparate and specialized fields the book is written at a level that is readily understandable by students from all scientific engineering and humanities fields
