Metals In Bone:

Metals in Bone N.D. Priest, Commission of the European Communities : Radiation Protection, 1985 **Metals in Bone** Nicholas D. Priest, 2012-12-06 In 1980 the Internal Emitters Committee of EULEP organised a symposium in Rotterdam on Bone and Bone Seeking Radionuclides Their Physiology Dosimetry and Effects The speakers for this meeting mostly from EULEP associated laboratories were chosen to review this field of scientific research mostly for the benefit of interested scientists who were not actively researching with bone seeking radionuclides This meeting was a success and its proceedings were subsequently published in the form of a book by the Commission of the European Communities reflecting the great importance that both EULEP and the Radiological Protection Programme of the Commission of the European Communities attaches to the study of radionuclides that deposit in bone The Metals in Bone symposium in Angers was intended to serve a different function from that of the meeting held in Rotterdam in that while these proceedings will certainly be of interest to non involved scientists the meeting was intended to be of most benefit to those actively researching the metabolism and effects of bone seeking metals Moreover in an attempt to increase the value of its discussions and the number of interested and participating scientists the remit of the meeting was broader and set to include papers on stable as well as radioactive metals **Trace Metals and Fluoride in Bones and Teeth** Nicholas D. Priest, Frank Van de Vyver, 1990-06-22 This volume is a comprehensive introduction to the analysis binding uptake metabolism kinetics modeling distribution occurrence toxicity and chelation of metals and fluoride in the body with special reference to mineralized tissues Both toxic and relatively harmless polyvalent cations and anions are considered Included are some which are stable and others which are radioactive While a number are essential trace elements others have no known metabolic role Most chapters are concerned with the uptake of bone seeking ions by the living skeleton but aspects of the post mortem uptake of metals and the process of fossilization are also considered Highlighted are the utility of modern analytical techniques and the more important bone seeking elements including aluminum lead cadmium fluorine and the radioactive heavy metals including uranium and plutonium This important publication is of particular value to those in the fields of biochemistry radioactive waste geology physiology dentistry orthopedics radiology and nuclear medicine urology industrial hygiene pharmacology anthropology paleontology and archeology [Toxicology of Metals, Volume I](#) Louis W.
