Origins Of Language What Nonhuman Primates Can Tell Us:

The Origins of Language Barbara J. King, 1999 Is human language unique in the natural world or does it have meaningful precursors in animal communication In this book primatologists and palaeoanthropologists examine the non human primate data and use their research to present new theories of language origin and evolution

The Origins of Language Nobuo Masataka, 2008-08-27 Developments in cognitive science indicate that human and nonhuman primates share a range of behavioral and physiological characteristics that speak to the issue of language origins This volume has three major themes woven throughout the chapters First it is argued that scientists in animal behavior and anthropology need to move beyond theoretical debate to a more empirically focused and comparative approach to language Second those empirical and comparative methods are described revealing underpinnings of language some of which are shared by humans and other primates and others of which are unique to humans New insights are discussed and several hypotheses emerge concerning the evolutionary forces that led to the design of language Third evolutionary challenges that led to adaptive changes in communication over time are considered with an eye toward understanding various constraints that channeled the process

The Gestural Origin of Language David F. Armstrong, Sherman Wilcox, 2007 This is a unique view of the origins of language describing what linguistic science would look like if sign language rather than speech was used as the basis for the study of language systems

The Nature and Origin of Language Denis Bouchard, 2013-10 Denis Bouchard looks at how the human brain got the capacity for language and how language evolved He argues that language is a system of signs and considers how these elements first came together in the brain His account of language origins offers insights into language and to constructions that have defied decades of linguistic analysis

The Social Origins of Language Daniel Dor, Chris Knight, Jerome Lewis, 2014-06-27 This book offers an exciting new perspective on the origins of language Language is conceptualized as a collective invention on the model of writing or the wheel and the book places social and cultural dynamics at the centre of its evolution language emerged and further developed in human communities already suffused with meaning and communication mimesis ritual song and dance alloparenting new divisions of labour and revolutionary changes in social relations The book thus challenges assumptions about the causal relations between genes capacities social communication and innovation the biological capacities are taken to evolve incrementally on the basis of cognitive plasticity in a process that recruits previous adaptations and fine tunes them to serve novel communicative ends Topics include the ability brought about by language to tell lies that must have confronted our ancestors with new problems of public trust the dynamics of social cognitive co evolution the role of gesture and mimesis in linguistic communication studies of how monkeys and apes express their feelings or thoughts play laughter dance song ritual and other social displays among extant hunter gatherers the social nature of language acquisition and innovation normativity and the emergence of linguistic norms the interaction of language and emotions and novel perspectives on the time frame for language evolution The contributors are

leading international scholars from linguistics anthropology palaeontology primatology psychology evolutionary biology artificial intelligence archaeology and cognitive science **From Hand to Mouth** Michael C. Corballis, 2002 Writing with wit and eloquence Corballis makes nimble reference to literature mythology natural history sports and contemporary politics as he explains in fascinating detail what is now known about the evolution of language Line illustrations **The Dynamic Dance** Barbara J. KING, Barbara J King, 2009-06-30 Mother and infant negotiate over food two high status males jockey for power female kin band together to get their way It happens among humans and it happens among our closest living relatives in the animal kingdom the great apes of Africa In this eye opening book we see precisely how such events unfold in chimpanzees bonobos and gorillas through a spontaneous mutually choreographed dance of actions gestures and vocalizations in which social partners create meaning and come to understand each other Using dynamic systems theory an approach employed to study human communication Barbara King is able to demonstrate the genuine complexity of apes social communication and the extent to which their interactions generate meaning As King describes apes create meaning primarily through their body movements and go well beyond conveying messages about food mating or predators Readers come to know the captive apes she has observed and others across Africa as well and to understand the process of creating social meaning This new perspective not only acquaints us with our closest living relatives but informs us about a possible pathway for the evolution of language in our own species King s theory challenges the popular idea that human language is instinctive with rules and abilities hardwired into our brains Rather **The Dynamic Dance** suggests language has its roots in the gestural building up of meaning that was present in the ancestor we shared with the great apes and that we continue to practice to this day **Primate Communication** Katja Liebal, Bridget M. Waller, Katie E. Slocombe, Anne M. Burrows, 2014 Multimodal approach to primate communication with focus on its cognitive foundations and how this relates to theories of language evolution **The Origins and Nature of Sociality** Robert W. Sussman, 2017-07-05 Scientific developments have increasingly been transforming our understanding of the place of human beings in nature The contributors to this book focus on the current status of research on sociality and the evolution of cooperative and altruistic behaviour in non human and human primates They examine questions related to the evolution cultural viability and hormonal underpinnings of human sociality in specific detail and describe patterns of sociality that shed light on human social behaviour **The Talking Ape**, 2007-03-08 In this fascinating mind opening book Robbins Burling presents the most convincing account of the origins of language ever published He sheds new light on how language affects the way we think behave and relate to each other and he gives us a deeper understanding of the nature of language itself The author traces language back to its earliest origins among our distant ape like forbears several million years ago and charts its growth to the time of our recent human ancestors He offers a new account of the route by which we acquired our defining characteristic and explores the nature of language as it developed throughout the course of our evolution He explains what the earliest forms of communication are

likely to have been how they worked and why they were deployed He examines the qualities of mind and brain needed to support the operations of language and the selective advantages they offered those able to use them Robbins Burling investigates the first links between signs sounds and meanings and explores the beginnings and prehistories of vocabulary and grammar He connects work in fields extending from linguistics sign languages and psychology to human paleontology evolutionary biology and archeology And he does all this in a crystal clear style constantly enlivened by flashes of wit and humor

The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers Vicki Cummings, Peter Jordan, Marek Zvelebil, 2014-04-24 For more than a century the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines and has also generated widespread public interest and debate The Oxford Handbook of the Archaeology and Anthropology of Hunter Gatherers provides a comprehensive review of hunter gatherer studies to date including critical engagements with older debates new theoretical perspectives and renewed obligations for greater engagement between researchers and indigenous communities Chapters provide in depth archaeological historical and anthropological case studies and examine far reaching questions about human social relations attitudes to technology ecology and management of resources and the environment as well as issues of diet health and gender relations all central topics in hunter gatherer research but also themes that have great relevance for modern global society and its future challenges The Handbook also provides a strategic vision for how the integration of new methods approaches and study regions can ensure that future research into the archaeology and anthropology of hunter gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity

Communication in Humans and Other Animals Gisela Håkansson, Jennie Westander, 2013-06-27 Communication is a basic behaviour found across animal species Human language is often thought of as a unique system which separates humans from other animals This textbook serves as a guide to different types of communication and suggests that each is unique in its own way human verbal and nonverbal communication communication in nonhuman primates in dogs and in birds Research questions and findings from different perspectives are summarized and integrated to show students similarities and differences in the rich diversity of communicative behaviours A core topic is how young individuals proceed from not being able to communicate to reaching a state of competent communicators and the role of adults in this developmental process Evolutionary aspects are also taken into consideration and ideas about the evolution of human language are examined The cross disciplinary nature of the book makes it useful for courses in linguistics biology sociology and psychology but it is also valuable reading for anyone interested in understanding communicative behaviour

[Kanzi's Primal Language](#) P. Segerdahl, W. Fields, S. Savage-Rumbaugh, 2005-08-05 Sue Savage Rumbaugh's work on the language capabilities of the bonobo Kanzi has intrigued the world because of its far reaching implications for understanding the evolution of the human language This book takes the reader behind the scenes of the filmed language tests It argues that while the tests prove that Kanzi has language the even

more remarkable manner in which he originally acquired it spontaneously in a culture shared with humans calls for a rethinking of language emphasizing its primal cultural dimensions

The Evolutionary Emergence of Language Chris Knight, Michael Studdert-Kennedy, James Hurford, 2000-11-20 Language has no counterpart in the animal world Unique to Homo sapiens it appears inseparable from human nature But how when and why did it emerge The contributors to this volume linguists anthropologists cognitive scientists and others adopt a modern Darwinian perspective which offers a bold synthesis of the human and natural sciences As a feature of human social intelligence language evolution is driven by biologically anomalous levels of social cooperation Phonetic competence correspondingly reflects social pressures for vocal imitation learning and other forms of social transmission Distinctively human social and cultural strategies gave rise to the complex syntactical structure of speech This book presenting language as a remarkable social adaptation testifies to the growing influence of evolutionary thinking in contemporary linguistics It will be welcomed by all those interested in human evolution evolutionary psychology linguistic anthropology and general linguistics

Mental States Andrea C. Schalley, Drew Khlentzos, 2007-12-13 Collecting the work of linguists psychologists neuroscientists archaeologists artificial intelligence researchers and philosophers this volume presents a richly varied picture of the nature and function of mental states Starting from questions about the cognitive capacities of the early hominin homo floresiensis the essays proceed to the role mental representations play in guiding the behaviour of simple organisms and robots thence to the question of which features of its environment the human brain represents and the extent to which complex cognitive skills such as language acquisition and comprehension are impaired when the brain lacks certain important neural structures Other papers explore topics ranging from nativism to the presumed constancy of categorization across signed and spoken languages from the formal representation of metaphor actions and vague language to philosophical questions about conceptual schemes and colours Anyone interested in mental states will find much to reward them in this fine volume

Squeezing Minds From Stones Karenleigh A. Overmann, Frederick L. Coolidge, 2019-04-04 Squeezing Minds From Stones is a collection of wide ranging contemporary essays on the interdisciplinary field of cognitive archaeology which offers cognitive and psychological models to explain archaeological artifacts like stone tools figurines and art

Outside-in, Inside-out Costantino Maeder, Olga Fischer, William J. Herlofsky, Université Catholique de Louvain, Universiteit van Amsterdam, Universität Zürich, 2005-01-01 This fourth volume of the Iconicity series is like its predecessors devoted to the study of iconicity in language and literature in all its forms Many of the papers turn the notion of iconicity inside out some suggesting that less is more others focus on the cognitive factors inside the brain that are important for the iconic phenomena that are produced in the outside world In addition this volume includes a paper related to iconicity in music and its interaction with language Other papers range from the theoretical issues involved in the evolution of language to those that offer many inside out claims such as claiming that nouns are derived from pronouns and as such should more properly be called pro pronouns Also this volume includes

perhaps the first English language analysis of the iconic aspects of sound symbolism in a prayer from the Koran This is a truly interdisciplinary collection that should turn some of the notions of iconicity in language and literature outside in and inside out

Evolutionary Cognitive Neuroscience Steven Platek, Julian Keenan, Todd Kennedy Shackelford, 2007 An essential reference for the new discipline of evolutionary cognitive neuroscience that defines the field's approach of applying evolutionary theory to guide brain behavior investigations Since Darwin we have known that evolution has shaped all organisms and that biological organs including the brain and the highly crafted animal nervous system are subject to the pressures of natural and sexual selection It is only relatively recently however that the cognitive neurosciences have begun to apply evolutionary theory and methods to the study of brain and behavior This landmark reference documents and defines the emerging field of evolutionary cognitive neuroscience Chapters by leading researchers demonstrate the power of the evolutionary perspective to yield new data theory and insights on the evolution and functional modularity of the brain Evolutionary cognitive neuroscience covers all areas of cognitive neuroscience from nonhuman brain behavior relationships to human cognition and consciousness and each section of *Evolutionary Cognitive Neuroscience* addresses a different adaptive problem After an introductory section that outlines the basic tenets of both theory and methodology of an evolutionarily informed cognitive neuroscience the book treats neuroanatomy from ontogenetic and phylogenetic perspectives and explores reproduction and kin recognition spatial cognition and language and self awareness and social cognition Notable findings include a theory to explain the extended ontogenetic and brain development periods of big brained organisms fMRI research on the neural correlates of romantic attraction an evolutionary view of sex differences in spatial cognition a theory of language evolution that draws on recent research on mirror neurons and evidence for a rudimentary theory of mind in nonhuman primates A final section discusses the ethical implications of evolutionary cognitive neuroscience and the future of the field Contributors C Davison Ankney Simon Baron Cohen S Marc Breedlove William Christiana Michael Corballis Robin I M Dunbar Russell Fernald Helen Fisher Jonathan Flombaum Farah Focquaert Steven J C Gaulin Aaron Goetz Kevin Guise Ruben C Gur William D Hopkins Farzin Irani Julian Paul Keenan Michael Kimberly Stephen Kosslyn Sarah L Levin Lori Marino David Newlin Ivan S Panyavin Shilpa Patel Webb Phillips Steven M Platek David Andrew Puts Katie Rodak J Philippe Rushton Laurie Santos Todd K Shackelford Kyra Singh Sean T Stevens Valerie Stone Jaime W Thomson Gina Volshteyn Paul Root Wolpe

The Development of the Mediated Mind Joan M. Lucariello, Judith A. Hudson, Robyn Fivush, Patricia J. Bauer, 2004-07-19 In this work the contributors examine ways in which cognition is embedded in everyday meaningful activities and the role of social context and cultural symbol systems such as language and text influence children's developing concepts and thought
