## **Pushbutton Fantasies:**

Pushbutton Fantasies Vincent Mosco, 1982      **Cyber-Marx** Nick Dyer-Witheford, 1999 In this highly readable and thought provoking work Nick Dyer Witheford assesses the relevance of Marxism in our time and demonstrates how the information age far from transcending the historic conflict between capital and its laboring subjects constitutes the latest battleground in their encounter Dyer Witheford maps the dynamics of modern capitalism showing how capital depends for its operations not just on exploitation in the immediate workplace but on the continuous integration of a whole series of social sites and activities from public health and maternity to natural resource allocation and the geographical reorganization of labor power He also shows how these sites and activities may become focal points of subversion and insurgency as new means of communication vital for the smooth flow of capital also permit otherwise isolated and dispersed points of resistance to connect and combine with one another Cutting through the smokescreen of high tech propaganda Dyer Witheford predicts the advent of a reinvented autonomist Marxism that will rediscover the possibility of a collective communist transformation of society Refuting the utopian promises of the information revolution he discloses the real potentialities for a new social order in the form of a twenty first century communism based on the common sharing of wealth      **Women and Technology** Urs E. **Continentalizing Canadian Telecommunications** Vanda Rideout, 2003-01-30 Rideout focuses on the protection of the public interest a crucial element neglected by most recent studies and shows that although alliances have been formed between labour consumers and public interest activists significant disagreements over issues such as free trade long distance and local competition and a targeted subsidy program for very low income Canadians have meant that this united front has not been able to counter the forces of the new neo liberal telecommunication policy regime Continentalizing Canadian Telecommunications details the complex relationships between the various corporate and government interests shows how the changes they brought about have locked Canada's telecommunications system into the orbit of the US system and discusses the implications this has for Canadians      *Communication Yearbook 12* James A. Anderson, 2012-03-22 In *Communication Yearbook 11* major contributions from leading scholars in a variety of communication fields are presented and then critiqued by other authorities often representing complementary or competing schools of thought Topics addressed and commented on include the mass media audience the theory of mediation effective policy for health care communication and feminist criticism of television      Call Centers and the Global Division of Labor Andrew J.R. Stevens, 2014-03-26 Call centers have come in the last three decades to define the interaction between corporations governments and other institutions and their respective customers citizens and members The offshoring and outsourcing of call center employment part of the larger information technology and information technology enabled services sectors continues to be a growing practice amongst governments and corporations in their attempts at controlling costs and providing new services While

incredible advances in technology have permitted the use of distant and offshore labor forces the grander reshaping of an international political economy of communications has allowed for the acceleration of these processes New and established labor unions have responded to these changes in the global regimes of work by seeking to organize call center workers These efforts have been assisted by a range of forces not least of which is the condition of work itself but also attempts by global union federations to build a bridge between international unionism and local organizing campaigns in the Global South and Global North Through an examination of trade union interventions in the call center industries located in Canada and India this book contributes to research on post industrial employment by using political economy as a juncture between development studies the sociology of work and labor studies      Symbolic Movement Philip Wexler, 2008-01-01 This is a book about sociology of education past present and future In the first section the author chronicles and specifies the changes in the field in a reflexive sociology of education tracing the path out of liberalism through radicalism and postmodernism to an emergent new age stance in understanding education in society Section two looks in more detail how these movements have actually worked in education and society The third section places the historical macrosocial analysis of education and society on the smaller more everyday screen of school life Based on the author's studies in high school the question of identity and education is the fulcrum for a series of concrete studies or school portraits which connect public social change and more personal everyday life and identity with the social process of schooling The final section probes the new age theme Questions of spirituality rationality magic mysticism and sublimation are related to changes both in education and in sociology of education What does it mean to do educational research in a re sacralized mystical society And does a new theory of sociology of education emerge on a Weberian rather than Durkheimian functionalist or Marxist radical view of the directions and reversals that begin in modernity and become more evident in our times      **Crossed Wires** Dan Schiller, 2023-02-17 A sweeping revisionist historical analysis of telecommunications networks from the dawn of the republic to the 21st century Telecommunications networks are vast intricate hugely costly systems for exchanging messages and information within cities and across continents From the Post Office and the telegraph to today's internet these networks have sown domestic division while also acting as sources of international power In *Crossed Wires* Dan Schiller who has conducted archival research on US telecommunications for more than forty years recovers the extraordinary social history of the major network systems of the United States Drawing on arrays of archival documents and secondary sources Schiller reveals that this history has been shaped by sharp social and political conflict and is embedded in the larger history of an expansionary US political economy Schiller argues that networks have enabled US imperialism through a recurrent American system of cross border communications Three other key findings wind through the book First business users of networks more than carriers and certainly more than residential users have repeatedly determined how telecommunications systems have developed Second despite their current importance for virtually every sphere of social life networks have been consecrated above all to aiding

the circulation of commodities Finally although the preferences of executives and officials have broadly determined outcomes these elites have repeatedly had to contend against the ideas and organizations of workers social movement activists and other reformers This authoritative and comprehensive revisionist history of US telecommunications argues that not technology but a dominative and contested political economy drove the evolution of this critical industry

**Research Methods and the New Media** Frederick Williams, Ronald E. Rice, Everett M. Rogers, 1988-09-26 The new media interactive videodiscs telecommunications computers VCRs teletext systems and more present researchers with new challenges when it comes to studying practical applications or theoretical effects This valuable volume aids researchers in first recognizing the special qualities of interactivity demassification and asynchronicity that the new media have created and to instruct professional researchers and students in alternative research methods multiple methods and the triangulation of results For the first time a variety of methods are examined as they apply to new media research including mathematical modeling controlled experiments quasiexperiments surveys longitudinal studies field studies archival and secondary research futures research and forecasting content analysis case studies and focus groups Whether the problem to be researched is as focused as considering the cost benefit for a school wishing to adopt computers in the classroom or as wide ranging as determining the effects of video games on child socialization this up to date and thorough guide alerts researchers to the pitfalls of traditional methodology and offers a firm foundation upon which they can build reliable accurate projects able to produce sound results

**Communication and Conflict** Jörg Becker, 2005 Papers presented at various conferences and articles some previously published

**Media/cultural Studies** Rhonda Hammer, Douglas Kellner, 2009 This anthology is designed to assist teachers and students in learning how to better understand and interpret our common culture and everyday life With a focus on contemporary media consumer and digital culture this book combines classic and original writings by both leading and rising scholars in the field The chapters present key theories concepts and methodologies of critical cultural and media studies as well as cutting edge research into new media Sections on teaching media cultural studies and concrete case studies provide practical examples that illuminate contemporary culture ranging from new forms of digital media and consumer culture to artifacts from TV and film including Barbie and Big Macs soap operas Talk TV Facebook and YouTube The lively articles show that media cultural studies is an exciting and relevant arena and this text should enable students and citizens to become informed readers and critics of their culture and society

**Theories of the Information Society** Frank Webster, 2014-03-21 Information is regarded as a distinguishing feature of our world Where once economies were built on industry and conquest we are now part of a global information economy Pervasive media expanding information occupations and the development of the internet convince many that living in an Information Society is the destiny of us all Coping in an era of information flows of virtual relationships and breakneck change poses challenges to one and all In Theories of the Information Society Frank Webster sets out to make sense of the information explosion taking a sceptical look at what

thinkers mean when they refer to the Information Society and critically examining the major post war approaches to informational development The fourth edition of this classic study brings it up to date with new research and with social and technological changes from the Twitter Revolutions of North Africa to financial crises that introduced the worst recession in a life time to the emergence of social media and blogging and reassesses the work of key theorists in the light of these changes More outspoken than in previous editions Webster urges abandonment of Information Society scenarios preferring analysis of the informatization of long established relationships This interdisciplinary book is essential reading for those trying to make sense of social and technological change in the post war era It addresses issues of central concern to students of sociology politics geography communications information science cultural studies computing and librarianship

**The Information Society** Robert Hassan, 2013-04-25 What are we to make of the information society Many prominent theorists have argued it to be the most profound and comprehensive transformation of economy culture and politics since the rise of the industrial way of life in the 18th century Some saw its arrival in a positive light where the dreams of democracy of connectivity and efficiency constituted a break with the old ways But other thinkers viewed it more in terms of the recurrent nightmare of capitalism where the processes of exploitation commodification and alienation are given much freer rein than ever before In this book Robert Hassan a prominent theorist in new media and its effects analyses and critically appraises these positions and forms them into a coherent narrative to illuminate the phenomenon Surveying the works of major information society theorists from Daniel Bell to Nicholas Negroponte and from Vincent Mosco to Manuel Castells The Information Society is an invaluable resource for understanding the nature of the information society as well as the meta processes of neoliberal globalisation and the revolution in information technologies that made it possible

**Telecommunications Politics** Bella Mody, Johannes M. Bauer, Joe Straubhaar, 1995-09-01 This volume brings together scholars and policymakers to address the issue of telecommunications policy in developing countries It elaborates on the position that economics and technology determine the framework for discussion but politics makes the decision Politics in this case refers to the dynamics of the power structure generated by the h

*Histories of Digital Journalism* Tamas Tofalvy, Igor Vobič, 2024-11-11 Building on the momentum of the recent historical turn in digital media and Internet studies this volume explores how digital journalism has developed from a historical perspective With contributions from established and emerging scholars from Europe Asia South and North America the book investigates not only how established journalistic systems transformed in the early days of digital but how the structural technological and cultural changes induced by digitization have reconfigured the trajectory of journalism The book argues in support of three main claims The first is that emphasis should be given to the plurality of histories instead of one single digital journalism history thereby acknowledging the complexities interactions of social relations cultural traditions power configurations and technological changes that have shaped journalism and digitization The

second is the decentralization and decolonization of digital journalism histories The third refers to the need to highlight and demonstrate the idea that the evolution of digital journalism should be viewed as the co construction of the social and technological realms With theoretical and methodological reflections on historicizing digital journalism along with original case studies or comparative inquiries into the phenomena over the decades long digital revolution of journalism this volume will shape the nascent field of digital journalism history and start a global critical exchange of various approaches to and aspects of historicizing digital journalism As such it will interest scholars and students of digital journalism journalism history digital media Internet studies and technology studies

**Global Information and World Communication** Hamid Mowlana,1997-05-05 The new edition of this major work offers a comprehensive analysis of international communication systems and the global flow of information Hamid Mowlana places the analysis of global mass media and other forms of communication within a critical overview of international and intercultural relations Extensively rewritten and revised Global Information and World Communication deals with the phenomenon of global information flow in all contexts political economic cultural technological legal and professional Mowlana illustrates how different communication strategies and systems have contributed to the creation of powerful interests and have altered the global scene He takes into account recent events and sho

Routledge Handbook of Digital Media and Communication Leah Lievrouw,Brian Loader,2020-11-16 What are we to make of our digital social lives and the forces that shape it Should we feel fortunate to experience such networked connectivity Are we privileged to have access to unimaginable amounts of information Is it easier to work in a digital global economy Or is our privacy and freedom under threat from digital surveillance Our security and welfare being put at risk Our politics undermined by hidden algorithms and misinformation Written by a distinguished group of leading scholars from around the world the Routledge Handbook of Digital Media and Communication provides a comprehensive unique and multidisciplinary exploration of this rapidly growing and vibrant field of study The Handbook adopts a three part structural framework for understanding the sociocultural impact of digital media the artifacts or physical devices and systems that people use to communicate the communicative practices in which they engage to use those devices express themselves and share meaning and the organizational and institutional arrangements structures or formations that develop around those practices and artifacts Comprising a series of essay chapters on a wide range of topics this volume crystallizes current knowledge provides historical context and critically articulates the challenges and implications of the emerging dominance of the network and normalization of digitally mediated relations Issues explored include the power of algorithms digital currency gaming culture surveillance social networking and connective mobilization More than a reference work this Handbook delivers a comprehensive authoritative overview of the state of new media scholarship and its most important future directions that will shape and animate current debates

Media Technologies Tarleton Gillespie,Pablo J. Boczkowski,Kirsten A. Foot,2014-01-24 Scholars from communication and media studies join those from science and

technology studies to examine media technologies as complex sociomaterial phenomena In recent years scholarship around media technologies has finally shed the assumption that these technologies are separate from and powerfully determining of social life looking at them instead as produced by and embedded in distinct social cultural and political practices Communication and media scholars have increasingly taken theoretical perspectives originating in science and technology studies STS while some STS scholars interested in information technologies have linked their research to media studies inquiries into the symbolic dimensions of these tools In this volume scholars from both fields come together to advance this view of media technologies as complex sociomaterial phenomena The contributors first address the relationship between materiality and mediation considering such topics as the lived realities of network infrastructure The contributors then highlight media technologies as always in motion held together through the minute unobserved work of many including efforts to keep these technologies alive Contributors Pablo J Boczkowski Geoffrey C Bowker Finn Brunton Gabriella Coleman Gregory J Downey Kirsten A Foot Tarleton Gillespie Steven J Jackson Christopher M Kelty Leah A Lievrouw Sonia Livingstone Ignacio Siles Jonathan Sterne Lucy Suchman Fred Turner

**The Political Economy of Information** Vincent Mosco, Janet Wasko, 1988 The information society is real Information as a marketable commodity is quickly taking up the powerful role once held by heavy industry and manufactured products How this revolution is affecting society and how society and government are responding to it is the subject of this book Its lessons and conclusions are of critical importance as we enter the last decade of this century Every dimension of social life whether in the home or the workplace is affected by information and the technologies that give it market value Along with the positive aspects of these broad changes there are inevitable problems the growing gap between the information rich and information poor the need for widespread access to communication and information technology the threat to individual privacy and the potential of the technology to create global instabilities The editors have enlisted specialists and scholars in business communications studies computing and information science economics law library science political science and sociology to examine these changes and problems by looking at information specifically as a commodity to be traded protected and desired
