The background of the entire image is a deep space scene. At the top right, a large, yellowish, ringed planet, resembling Saturn, is partially visible. In the center, a comet with a bright orange and red nucleus and a long, wispy blue tail is moving towards the left. At the bottom, a small, blue, needle-like probe with a red ring at its base is shown, with a red energy trail behind it. The overall color palette is dominated by the blues of space, the yellows of the planet, and the oranges and reds of the comet and probe.

Supreme Court , 1902 **Spitsbergen Push Moraines** J.J.M. van der Meer, 2004-04-20 The book deals with push moraines on Spitsbergen The main body is a translation of the original German report by Karl Gripp on a 1927 expedition The quality of Gripp s work is evaluated to see whether it stands the test of time It is found that it is very modern every year people still go into the field with the same research questions It is also found that

most likely Gripp s report contains the first description of features that we now take for granted for instance the description of looped moraines to detect surges Push moraines are still being studied and to show where we stand now two papers have been added that analyse two particular examples Holmstr mbreen and Sefstr mbreen The two examples are geographically close together but reflect two completely different settings terrestrial Holmstr mbreen and tidewater Sefstr mbreen Since a few years we know of the De Geer Archive a collection of glass negatives of Spitsbergen relating to De Geer s expeditions between 1882 and 1910 The negatives have only emerged recently and a collection of prints relating to Holmstr mbreen and Sefstr mbreen is included here Together with a third paper incorporated in the book this time an evaluation of De Geer s photos and maps of the Sefstr mbreen surge this material shows the importance of incorporating historical documentation in our studies
