Differential Geometry Applied To Dynamical Systems (With Cd-rom) Jean-marc Ginoux, 2009-04-03 This book aims to present a new approach called Flow Curvature Method that applies Differential Geometry to Dynamical Systems Hence for a trajectory curve an integral of any n dimensional dynamical system as a curve in Euclidean n space the curvature of the trajectory or the flow may be analytically computed Then the location of the points where the curvature of the flow vanishes defines a manifold called flow curvature manifold Such a manifold being defined from the time derivatives of the velocity vector field contains information about the dynamics of the system hence identifying the main features of the system such as fixed points and their stability local bifurcations of codimension one center manifold equation normal forms linear invariant manifolds straight lines planes hyperplanes In the case of singularly perturbed systems or slow fast dynamical systems the flow curvature manifold directly provides the slow invariant manifold analytical equation associated with such systems Also starting from the flow curvature manifold it will be demonstrated how to find again the corresponding dynamical system thus solving the inverse problem
