

Hermitian Form

A Hermitian form on a **vector space** V over the complex field \mathbb{C} is a function $f : V \times V \rightarrow \mathbb{C}$ such that for all $u, v, w \in V$ and all $a, b \in \mathbb{R}$,

$$1. f(a u + b v, w) = a f(u, w) + b f(v, w).$$

$$2. f(u, v) = \overline{f(v, u)}.$$

Here, the bar indicates the complex conjugate. It follows that

$$f(u, a v + b w) = \overline{a} f(u, v) + \overline{b} f(u, w), \quad (1)$$

which can be expressed by saying that f is **antilinear** on the second coordinate.

Moreover, for all $v \in V$, $f(v, v) = \overline{f(v, v)}$, which means that $f(v, v) \in \mathbb{R}$.

An example is the **dot product** of \mathbb{C}^n , defined as

$$(u_1, \dots, u_n) \cdot (v_1, \dots, v_n) = \sum_{i=1}^n u_i \overline{v_i}. \quad (2)$$

Quadratic Hermitian Forms:

Quadratic and Hermitian Forms W. Scharlau, 2012-12-06 For a long time at least from Fermat to Minkowski the theory of quadratic forms was a part of number theory Much of the best work of the great number theorists of the eighteenth and nineteenth century was concerned with problems about quadratic forms On the basis of their work Minkowski Siegel Hasse Eichler and many others created the impressive arithmetic theory of quadratic forms which has been the object of the well known books by Bachmann 1898 1923 Eichler 1952 and O Meara 1963 Parallel to this development the ideas of abstract algebra and abstract linear algebra introduced by Dedekind Frobenius E Noether and Artin led to today's structural mathematics with its emphasis on classification problems and general structure theorems On the basis of both the number theory of quadratic forms and the ideas of modern algebra Witt opened in 1937 a new chapter in the theory of quadratic forms His most fruitful idea was to consider not single individual quadratic forms but rather the entity of all forms over a fixed ground field and to construct from this an algebraic object This object the Witt ring then became the principal object of the entire theory Thirty years later Pfister demonstrated the significance of this approach by his celebrated structure theorems

Quadratic and Hermitian Forms over Rings Max-Albert Knus, 2012-12-06 From its birth in Babylon till 1936 the theory of quadratic forms dealt almost exclusively with forms over the real field the complex field or the ring of integers Only as late as 1937 were the foundations of a theory over an arbitrary field laid This was in a famous paper by Ernst Witt Still too early apparently because it took another 25 years for the ideas of Witt to be pursued notably by Albrecht Pfister and expanded into a full branch of algebra Around 1960 the development of algebraic topology and algebraic K theory led to the study of quadratic forms over commutative rings and hermitian forms over rings with involutions Not surprisingly in this more general setting algebraic K theory plays the role that linear algebra plays in the case of fields This book exposes the theory of quadratic and hermitian forms over rings in a very general setting It avoids as far as possible any restriction on the characteristic and takes full advantage of the functorial aspects of the theory The advantage of doing so is not only aesthetical on the one hand some classical proofs gain in simplicity and transparency the most notable examples being the results on low dimensional spinor groups on the other hand new results are obtained which went unnoticed even for fields as in the case of involutions on 16 dimensional central simple algebras The first chapter gives an introduction to the basic definitions and properties of hermitian forms which are used throughout the book

Advances on Superelliptic Curves and Their Applications L. Beshaj, T. Shaska, E. Zhupa, 2015-07-16 This book had its origins in the NATO Advanced Study Institute ASI held in Ohrid Macedonia in 2014 The focus of this ASI was the arithmetic

of superelliptic curves and their application in different scientific areas including whether all the applications of hyperelliptic curves such as cryptography mathematical physics quantum computation and diophantine geometry can be carried over to the superelliptic curves Additional papers have been added which provide some background for readers who were not at the conference with the intention of making the book logically more complete and easier to read but familiarity with the basic facts of algebraic geometry commutative algebra and number theory are assumed The book is divided into three sections The first part deals with superelliptic curves with regard to complex numbers the automorphisms group and the corresponding Hurwitz loci The second part of the book focuses on the arithmetic of the subject while the third addresses some of the applications of superelliptic curves

From Algebraic Structures to Tensors Gérard Favier, 2020-01-02 Nowadays tensors play a central role for the representation mining analysis and fusion of multidimensional multimodal and heterogeneous big data in numerous fields This set on Matrices and Tensors in Signal Processing aims at giving a self contained and comprehensive presentation of various concepts and methods starting from fundamental algebraic structures to advanced tensor based applications including recently developed tensor models and efficient algorithms for dimensionality reduction and parameter estimation Although its title suggests an orientation towards signal processing the results presented in this set will also be of

use to readers interested in other disciplines This first book provides an introduction to matrices and tensors of higher order based on the structures of vector space and tensor space Some standard algebraic structures are first described with a focus on the hilbertian approach for signal representation and function approximation based on Fourier series and orthogonal polynomial series Matrices and hypermatrices associated with linear bilinear and multilinear maps are more particularly studied Some basic results are presented for block matrices The notions of decomposition rank eigenvalue singular value and unfolding of a tensor are introduced by emphasizing similarities and differences between matrices and tensors of higher order Comprehensive Abstract Algebra Kulbhushan Parkash; P.N.
