**Qualitative Process Theory Using Linguistic Variables** Bruce D'Ambrosio, 2012-12-06 8 5 Summary In this chapter we have identified three basic patterns of influences that lead to ambiguity in the QP analysis of the basic active furnace state We have then shown how modification of these patterns by adding equilibrium values and sensitivity annotations on influence arcs could permit resolution of the ambiguities Finally we have described in detail the extensions needed to the basic influence resolution algorithm in QP theory to operate on these extended descriptions We have also shown that the modified influence resolution algorithm corrects an error in Forbus original method for combining influences We have then presented an extended example in which introduction of equilibrium assumptions eliminates all ambiguity in the influence resolution deduction In the next chapter we extend these techniques further by developing a qualitative perturbation analysis technique that permits us to answer what if control questions then we extend this technique to obtain quantitative as well as qualitative effects of hypothetical control actions 8

**Fuzzy Reasoning in Information, Decision and Control Systems** S.G. Tzafestas, Anastasios N. Venetsanopoulos, 2007-08-28 Great progresses have been made in the application of fuzzy set theory and fuzzy logic Most remarkable area of application is fuzzy control where fuzzy logic was first applied to plant control systems and its use is expanding to consumer products Most of fuzzy control systems uses fuzzy inference with max min or max product composition similar to the algorithm that first used by Mamdani in 1970s Some algorithms are developed to refine fuzzy controls systems but the main part of algorithm stays the same Triggered by the success of fuzzy control systems other ways of applying fuzzy set theory are also investigated They are usually referred to as fuzzy expert systems and their purpose are to combine the idea of fuzzy theory with AI based approach toward knowledge processing These approaches can be more generally viewed as fuzzy information processing that is to bring fuzzy idea into information processing systems

The pioneering study by Bowman 1980 reawakened interest in risk and return relations in the strategic management literature We do not examine this literature here because we have elsewhere reviewed it in detail 1 and because for the most part these studies have been confined to ex post data Discussions of the strategies which subjects used to direct their ex ante evaluations of risks and returns have either been omitted or else have been only indirectly inferred from ex post data In addition with few exceptions this literature does not attempt to ascertain the meanings that might have been assigned by subjects to terms like risk and or the returns with which they have been concerned Even fewer of these studies have attempted to ascertain how the subjects implemented their definitions en of prospective strategies Thus this literature may route to arriving at evaluations best be regarded as bearing only indirect relations to the present study which is concerned not only with the meanings assigned to terms like risk and return but also with how these terms are used in arriving at risk and return evaluations of proposed strategies as well as how they are measured and used on an ex ante basis en route to seeing how these evaluations match with ex post performance In a sense one part of this study is

Intelligent Systems for Engineering Ram D. Sriram, 2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the

faith that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An experienced engineer deals with these ill structured problems using his/her judgment and experience The knowledge based systems KBS technology which emerged out of research in artificial intelligence AI offers a methodology to solve these ill structured engineering problems The emergence of the KBS technology can be viewed as the knowledge revolution other important events that led to increased productivity are the industrial revolution 17th century the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities
