Quantifying The Impact Of Technical Barriers To Trade Can It Be Done:

Quantifying the Impact of Technical Barriers to Trade Keith E. Maskus, John Wilson, 2025-10-01 This book provides an up to date discussion of economic issues involved in analyzing regulations of product quality and performance in international trade Among the issues addressed in this collection are restrictions on genetically modified foods and pesticide use and compatibility standards for computers While such regulations may serve important goals they may also interfere with international trade flow by raising the costs of compliance This is of special concern to developing countries which have found it difficult to meet the increasingly exacting regulations imposed by the United States and Europe Keith E Maskus and John S Wilson gather prominent international trade specialists to ask whether the impacts of such regulations may be quantified systematically in order to inform the international policy debate The essays included here cover all fronts of the debate over regulatory issues and trade conflicts The discussion ranges from a review of how trade conflicts emerge and how they are managed by the international trading system to a technical analysis of the potential impact of European restraints on trade in genetically modified products to an examination of methods for estimating the costs of compliance with environmental regulations Considerable attention is paid to whether the emergence and enforcement of stronger standards among developed economies could result in diminished trade opportunities for developing countries At the same time the possibility that standards could expand market access through resolving consumer information problems is analyzed This book will appeal to international economists international relations specialists and individuals concerned about appropriate regulation of safety and health issues in the global economy Keith E Maskus is Professor of Economics University of Colorado Boulder John S Wilson is Lead Economist Development Economics Research Group The World Bank
