## **Quantitative Models For Reverse Logistics:**

**Reverse Logistics** Rommert Dekker,2004-01-22 This book addresses decision making in reverse logistics which concerns the integration of used and obsolete products back into the supply chain as valuable resources It covers a wide range of aspects related to distribution production and inventory management and supply chain management For each topic it highlights key managerial issues in real life examples and explains which quantitative models are available for addressing them By treating a broad range of issues in a unified way the book offers the reader a comprehensive view on the field of reverse logistics *Quantitative Models for Reverse Logistics* Moritz Fleischmann,2012-12-06 Economic marketing and legislative considerations are increasingly leading companies to take back and recover their products after use From a logistics perspective these initiatives give rise to new goods flows from the user back to the producer The management of these goods flows opposite to the traditional supply chain flows is addressed in the recently emerged field of Reverse Logistics This monograph considers quantitative models that support decision making in Reverse Logistics To this end several recent case studies are reviewed Moreover first hand insight from a study on used electronic equipment is reported on On this basis logistics issues arising in the management of reverse goods flows are identified Moreover differences between Reverse Logistics and more traditional logistics contexts are highlighted Finally attention is paid to capturing the characteristics of Reverse Logistics in appropriate quantitative models

**Quantitative Models for Reverse Logistics : a Review** Moritz Fleischmann,Jacqueline M. Bloemhof-Ruwaard,Rommert Dekker,Erwin van der Laan,Jo A. E. E. van Nunen,Luk N. Van Wassenhove,1997 *Quantitative Models for Reverse Logistics* ,1997 FME 2001: Formal Methods for Increasing Software Productivity Jose N. Oliveira,2001-02-28 This book constitutes the refereed proceedings of the International Symposium of Formal Methods Europe FME 2001 held in Berlin Germany in March 2001 The 32 revised full papers presented together with abstracts of three invited talks were carefully reviewed and selected from a total of 72 submissions Focusing on increasing software productivity all current aspects in formal methods are covered Among the application areas addressed are avionics smart cards financial engineering E commerce middleware security telecommunications etc *Strategic Planning Models for Reverse and Closed-Loop Supply Chains* Kishore K. Pochampally,Satish Nukala,Surendra M. Gupta,2008-09-22 The rapid technological development of new products coupled with the growing consumer desire for the latest technology has led to a new environmental problem products that are discarded prematurely But behind every problem lies an opportunity Many of these products can be reprocessed leading to savings in natural resources energy landfill s

**Strategic Closed-Loop Supply Chain Management** Baptiste Lebreton,2006-11-22 Closed loops depict supply chains for which Original Equipment Manufacturer reintegrate their returned products into their own production network While the reverse logistics research has extensively addressed the technical aspects of product reintegration very few insights are available on whether OEMs should commit themselves to a

closed loop The structure of the monograph is aligned to the decision making process of Original Equipment Manufacturers willing to investigate the potential of closed loops This decision making process is structured around fundamental questions managers are expected to answer prior to running a circular supply chain Does a closed loop fit with the corporate objectives Is it profitable to run a closed loop How should OEMs deal with free riders competition Which product technology location setup leads to a profit maximizing supply chain The planning framework is finally applied to two case studies from the tire and the computer industry

*Introduction to Management of Reverse Logistics and Closed Loop Supply Chain Processes* Donald F. Blumberg, 2004-11-29 Increasing legislative and environmental pressure requires businesses to become more responsive to products that either have been returned or that are at the end of their useful lives Life cycles are getting shorter and efficient handling can save large amounts of money since many materials can be extracted and reused or redistributed Reverse lo

*Operations Research Proceedings 2005* Hans-Dietrich Haasis, Herbert Kopfer, Jörn Schönberger, 2006-09-12 This volume contains a selection of 128 papers presented in lectures during the international scientific symposium Operations Research 2005 OR 2005 held at the University of Bremen September 7 9 2005 This international conference took place under the auspices of the German Operations Research Society GOR The symposium had about 600 participants from countries all over the world It attracted academics and practitioners working in various fields of Operations Research and provided them with the most recent advances in Operations Research as well as related areas in Economics Mathematics and Computer Science including the special interest streams Logistics and New Maritime Businesses The program consisted of 3 plenary and 15 semi plenary talks and about 400 contributed presentations selected by the program committee to be presented in 20 sections

**Assessing and Optimizing the Reverse Logistic Process Using Computer Aided Modelling Techniques** Martin Bonev, 2011-08-09 Inhaltsangabe Introduction As the world population is growing continuously and emerging markets are expanding natural resources are being used even more intensively Because of the scarcity of natural resources industry faces a changing business environment Due to government regulations companies nowadays must handle not only in terms of efficiency but also of sustainable development and new market opportunities Thus with the progression of the logistics sector in recent years supply chain management and especially the concept of reverse logistics have become more important for both industry and science By utilizing reverse logistics companies aim at maximizing their product revenue while reducing the costs of product returns Accordingly implementing an effective concept of reverse logistics while manufacturing environmentally friendly products has become a strategic issue In order to meet the requirements companies are confronted with the problem of reducing the uncertainties regarding the quality quantity and timing of the product returns In this context a high level of uncertainty leads to a strong increase in complexity compared to the traditional forward supply chains Using modern computer aided modelling techniques such as system dynamics helps to counteract this complexity since they not only enable a better understanding of

the dynamic behaviour of such complex systems but also allow an improved estimation of the impact of a changing environment and management decisions This thesis contributes towards an improvement of the strategic decision making process in the field of reverse logistics by providing a generic simulation model which can be used to analyse the influence of different environmental and economical policies with respect to prevailing market conditions To achieve this objective the following approach is proposed In Chapter 2 the theoretical foundation of reverse logistics is characterized forming the framework for the subsequent analytical approach concerning the appropriate model development For this purpose first an overview of the state of the art concerning the processes and influencing factors within the field of reverse logistics is provided This is achieved by describing the theoretical background of the topic including a characterization of the impact of individual reverse logistic activities on each other and on their environment Afterwards current challenges and trends when
