*Examples in Quantitative Zoology* G. M. Jarman, 1970      *The Paleobiological Revolution* David Sepkoski, Michael Ruse, 2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology      **QUANTITATIVE ZOOLOGY.** Sanjay Madan, 2017      *Revision of the Ektopodontidae (Mammalia, Marsupialia, Phalangerioidea) of the Australian Neogene* Michael O. Woodburne, 1986-01-01

Quantitative Zoology George Gaylord Simpson, 1963      **Science as a Process** David L. Hull, 2010-12-15 Legend is overdue for replacement and an adequate replacement must attend to the process of science as carefully as Hull has done I share his vision of a serious account of the social and intellectual dynamics of science that will avoid both the rosy blur of Legend and the facile charms of relativism Because of Hull's deep concern with the ways in which research is actually done Science as a Process begins an important project in the study of science It is one of a distinguished series of books which Hull himself edits Philip Kitcher Nature In Science as a Process David Hull argues that the tension between cooperation and competition is exactly what makes science so successful Hull takes an unusual approach to his subject He applies the rules of evolution in nature to the evolution of science arguing that the same kinds of forces responsible for shaping the rise and demise of species also act on the development of scientific ideas Natalie Angier New York Times Book Review By far the most professional and thorough case in favour of an evolutionary philosophy of science ever to have been made It contains excellent short histories of evolutionary biology and of systematics the science of classifying living things an important and

original account of modern systematic controversy a counter attack against the philosophical critics of evolutionary philosophy social psychological evidence collected by Hull himself to show that science does have the character demanded by his philosophy and a philosophical analysis of evolution which is general enough to apply to both biological and historical change Mark Ridley Times Literary Supplement Hull is primarily interested in how social interactions within the scientific community can help or hinder the process by which new theories and techniques get accepted The claim that science is a process for selecting out the best new ideas is not a new one but Hull tells us exactly how scientists go about it and he is prepared to accept that at least to some extent the social activities of the scientists promoting a new idea can affect its chances of being accepted Peter J Bowler Archives of Natural History I have been doing philosophy of science now for twenty five years and whilst I would never have claimed that I knew everything I felt that I had a really good handle on the nature of science Again and again Hull was able to show me just how incomplete my understanding was Moreover Science as a Process is one of the most compulsively readable books that I have ever encountered Michael Ruse Biology and Philosophy

Simpson,1960      **Rereading the Fossil Record** David Sepkoski,2022-12-22 David Sepkoski s book is the first to examine the rise of paleobiology and the emergence of macroevolution as a discipline in the 1970s Kevin Padian University of California Berkeley Rereading the Fossil Record presents the first ever historical account of the origin rise and importance of paleobiology from the mid nineteenth century to the late 1980s Drawing on a wealth of archival material David Sepkoski shows how the movement was conceived and promoted by a small but influential group of paleontologists and examines the intellectual disciplinary and political dynamics involved in the ascendancy of paleobiology By tracing the role of computer technology large databases and quantitative analytical methods in the emergence of paleobiology this book also offers insight into the growing prominence and centrality of data driven approaches in recent science In the 1970s a new kid on the block was shaking up paleontology geology and biology Historian David Sepkoski charts the rise of paleobiology from 1945 to 1985 driven by a small but illustrious band of paleontologists including Stephen Jay Gould and David Raup who grappled with how the geological record could produce evidence for evolution The solution as Sepkoski engagingly relates lay in quantitative analysis of evolutionary patterns in fossils Nature David Sepkoski s book is the one book that anyone interested in evolution should buy this year And next year And probably the year after The reason is that for the first time the emergence of the modern science of macroevolution receives its due Reports of the National Center for Science Education      **Collecting Experiments** Bruno J.

Strasser,2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers collectors curators and analysts

Collecting Experiments traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century

**The Scientific 100** John G. Simmons,2000 In vivid biographical sketches the author chronicles the lives and accomplishments of the world s most influential figures in science chosen in consultation with members of the New York Academy of Sciences Photos

**Thinking about Evolution** Rama S. Singh,2001 Originally published in 2001 this is the second of two volumes published by Cambridge University Press in honour of Richard Lewontin This second volume of essays honours the philosophical historical and political dimensions of his work It is fitting that the volume covers such a wide range of perspectives on modern biology given the range of Lewontin s own contributions He is not just a very successful practitioner of evolutionary genetics but a rigorous critic of the practices of genetics and evolutionary biology and an articulate analyst of the social political and economic contexts and consequences of genetic and evolutionary research The volume begins with an essay by Lewontin on Natural History and Formalism in Evolutionary Genetics and includes contributions by former students post docs colleagues and collaborators which cover issues ranging from the history and conceptual foundations of evolutionary biology and genetics to the implications of human genetic diversity

*Evolutionary Genetics* R. S. Singh,Costas B. Krimbas,2000-03-28 This book brings out the central role of evolutionary genetics in all aspects of its connection to evolutionary biology
