Quantum Brain Dynamics And Consciousness An Introduction Advances In Consciousness Research V 3:

Quantum Brain Dynamics and Consciousness Mari Jibu, 1995 This introduction to quantum brain dynamics is accessible to a broad interdisciplinary audience The authors a brain scientist and a theoretical physicist present a new quantum framework for investigating advanced functions of the brain such as consciousness and memory The book is the first to give a systematic account founded in fundamental quantum physical principles of how the brain functions as a unified system It is based on the quantum field theory originated in the 1960s by the great theoretical physicist Hiroshi Umezawa to whom the book is dedicated It poses an alternative to the dominant conceptions in the neuro and cognitive sciences which take neurons organized into networks as the basic constituents of the brain Certain physical substrates in the brain are shown to support quantum field phenomena and the resulting strange quantum properties are used to explain consciousness and memory This change of perspective results in a radically new vision of how the brain functions

The Caldron of Consciousness Ralph D. Ellis, Natika Newton, 2000-01-01 These new studies by prominent neuroscientists psychologists and philosophers work toward a coherent framework for understanding emotion and its contribution to the functioning of consciousness in general as an aspect of self organizing embodied subjects Distinguishing consciousness from unconscious information processing hinges on the role of motivating emotions in all conscious modalities and how emotional brain processes interact with those traditionally associated with cognitive function Computationally registering processing sensory signals e g in the occipital lobe or area V4 by itself does not result in perceptual consciousness which requires subcortical structures such as amygdala hypothalamus and brain stem This interdisciplinary anthology attempts to understand the complexity of emotional intentionality why the role of motivation in self organizing processes is crucial in distinguishing conscious from unconscious processes how emotions account for agency and how an adequate approach to emotion motivation can address the traditional mind body problem through a holistic understanding of the conscious behaving organism Series B

Fractals of Brain, Fractals of Mind Earl R. Mac Cormac, Maksim Stamenov, 1996 This collective volume is the first to discuss systematically what are the possibilities to model different aspects of brain and mind functioning with the formal means of fractal geometry and deterministic chaos At stake here is not an approximation to the way of actual performance but the possibility of brain and mind to implement nonlinear dynamic patterns in their functioning The contributions discuss the following topics among others the edge of chaos dynamics in recursively organized neural systems and in intersensory interaction the fractal timing of the neural functioning on different scales of brain networking aspects of fractal neurodynamics and quantum chaos in novel biophysics the fractal maximum power evolution of brain and mind the chaotic dynamics in the development of consciousness etc It is suggested that the margins of our capacity for phenomenal experience are fractal limit phenomena Here the possibilities to prove the plausibility of fractal modeling with appropriate experimentation and rational reconstruction are also discussed A conjecture is made that the brain vs mind differentiation becomes possible most probably

only with the imposition of appropriate symmetry groups implementing a flowing interface of features of local vs global brain dynamics Series B Spatial Cognition Seán Ó Nualláin, 2000 Spatial Cognition brings together psychology computer science linguistics and geography discussing how people think about space our internal cognitive maps and spatial perception and how we communicate about space for instance giving route directions or using spatial metaphors The technological applications adding dynamism to the area include computer interfaces educational software multimedia and in car navigation systems On the experimental level themes as varied as gender differences in orientation and of course wholly unrelated the role of the hippocampus in rodent navigation are described Much detailed analysis and computational modeling of the structure of short term memory STM is discussed The papers were presented at the 1998 annual meeting of the Cognitive Science Society of Ireland Mind III Series B **Microgenetic approach to the conscious mind** Talis Bachmann, 2000 Many secrets of nature have been discovered since we have a better understanding of microstructures for example subatomic spheres in physics and genetic structures in biochemistry This book is set to convey an overview of the history methods findings and theoretical accounts of microgenetic research in consciousness and experimental psychology The reader will find information about how conscious percepts unfold within only a fraction of a second In a sense and according to the microgenetic hypothesis our subjectively experienced perceptual image undergoes formation similar to the process of developing a photograph Yet the time scale of the awareness related perceptual development is much finer and therefore accessible only to observation armed with special experimental procedures that are exposed in this book In addition the author presents empirical findings and theoretical interpretations from his own lab Professor Talis Bachmann has been active in microgenetic research on attention perception and consciousness for more than 25 years Series B

Consciousness and Intentionality Grant Gillett, John McMillan, 2001 Is there an internal relationship between consciousness and intentionality Can mental content be described in such a way so as to avoid dualism What is the influence of social context upon consciousness conceptions of self and mental content This book considers questions such as these and argues for a conception of consciousness mental content and intentionality that is anti Cartesian in its major tenets Focusing upon the rule governed nature of concepts and the grounding of the rules for concept use in the practical world intentional consciousness emerges as a phenomena that depends upon social context Given that dependence the authors consider and set aside attempts to reduce human consciousness and intentionality to phenomena explicable at biological or neuroscientific levels Series A Investigating Phenomenal Consciousness Max Velmans, 2000-01-01 How can one investigate phenomenal consciousness As in other areas of science the investigation of consciousness aims for a more precise knowledge of its phenomena and the discovery of general truths about their nature This requires the development of appropriate first person second person and third person methods This book introduces some of the creative ways in which these methods can be applied to different purposes e g to understanding the relation of consciousness to brain to examining or changing

consciousness as such and to understanding the way consciousness is influenced by social clinical and therapeutic contexts To clarify the strengths and weaknesses of different methods and to demonstrate the interplay of methodology and epistemology the book also suggests a number of maps of the consciousness studies terrain that place different approaches to the study of consciousness into a broader interdisciplinary context Series A Toward a Science of Consciousness III Stuart R. Hameroff, Alfred W. Kaszniak, David John Chalmers, 1999 Can there be a science of consciousness This issue has been the focus of three landmark conferences sponsored by the University of Arizona in Tucson The first two conferences and books have become touchstones for the field This volume presents a selection of invited papers from the third conference Can there be a science of consciousness This issue has been the focus of three landmark conferences sponsored by the University of Arizona in Tucson The first two conferences and books have become touchstones for the field This volume presents a selection of invited papers from the third conference It showcases recent progress in this maturing field by researchers from philosophy neuroscience cognitive psychology phenomenology and physics It is divided into nine sections the explanatory gap color neural correlates of consciousness vision emotion the evolution and function of consciousness physical reality the timing of conscious experience and phenomenology Each section is preceded by an overview and commentary by the editors Contributors Dick J Bierman Jeffrey Burgdorf A Graham Cairns Smith William H Calvin Christian de Quincey Frank H Durgin Vittorio Gallese Elizabeth L Glisky Melvyn A Goodale Richard L Gregory Scott Hagan C Larry Hardin C A Heywood Masayuki Hirafuji Nicholas Humphrey Harry T Hunt Piet Hut Alfred W Kaszniak Robert W Kentridge Stanley A Klein Charles D Laughlin Joseph Levine Lianggang Lou Shimon Malin A David Milner Steven Mithen Martine Nida Rumelin Stephen Palmer Jaak Panksepp Dean Radin Steven Z Rapcsak Sheryl L Reminger Antti Revonsuo Gregg H Rosenberg Yves Rossetti Jeffrey M Schwartz Jonathan Shear Galen Strawson Robert Van Gulick Frances Vaughan Franz X Vollenweider B Alan Wallace Douglas F Watt Larry Weiskrantz Fred A Wolf Kunio Yasue Arthur Zajonc **Beyond**

Dissociation Yves Rossetti, Antti Revonsuo, 2000 Analysis and dissociation have proved to be useful tools to understand the basic functions of the brain and the mind which therefore have been decomposed to a multitude of ever smaller subsystems and pieces by most scientific approaches However the understanding of complex functions such as consciousness will not succeed without a more global consideration of the ways the mind brain works This implies that synthesis rather than analysis should be applied to the brain The present book offers a collection of contributions ranging from sensory and motor cognitive neuroscience to mood management and thought which all focus on the dissociation between conscious explicit and nonconscious implicit processing in different cognitive situations The contributions in this book clearly demonstrate that conscious and nonconscious processes typically interact in complex ways The central message of this collection of papers is In order to understand how the brain operates as one integrated whole that generates cognition and behaviour we need to reassemble the brain and mind and put all the conscious and nonconscious pieces back together again Series B

Psychological Concepts and Biological Psychiatry Peter Zachar, 2000 This interdisciplinary work addresses the question What role should psychological conceptualization play for thinkers who believe that the brain is the organ of the mind It offers readers something unique both by systematically comparing the writings of eliminativist philosophers of mind with the writings of the most committed proponents of biological psychiatry and by critically scrutinizing their shared anti anthropomorphism from the standpoint of a diagnostician and therapist Contradicting the contemporary assumption that common sense psychology has already been proven futile and we are just waiting for an adequate scientifically based replacement this book provides explicit philosophical and psychological arguments showing why if they did not already have both cognitive and psychodynamic psychologies philosophers and scientists would have to invent them to better understand brains Series A

The Development of Implicit and Explicit Memory Carolyn K. Rovee-Collier, Harlene Hayne, Michael Colombo, 2001-01-01 This is the only book that examines the theory and data on the development of implicit and explicit memory It first describes the characteristics of implicit and explicit memory including conscious recollection and tasks used with adults to measure them Next it reviews the brain mechanisms thought to underlie implicit and explicit memory and the studies with amnesics that initially prompted the search for different neuroanatomically based memory systems Two chapters review the Jacksonian first in last out principle and empirical evidence for the hierarchical appearance and dissolution of two memory systems in animal models rats nonhuman primates children and normal amnesic adults Two chapters examine memory tasks used with human infants and evidence of implicit and explicit memory during early infancy Three final chapters consider structural and processing accounts of adult memory dissociations their applicability to infant memory dissociations and implications of infant data for current concepts of implicit and explicit memory Series B
