Sacred Life and Demons Kenneth Deaton,2024-03-28 Is life sacred and to whom If our lives are sacred to each of us should we be in control of how we are to die Or should questions of life and death be answered only by those who believe and interpret the Bible as the will of a supernatural creator god Does the Bible confirm the existence of a god who loves and would never harm an innocent child Did this god create our reproductive processes such that the most unique human DNA ends in abortion Or are spontaneous abortions just the result of sin How do we define a person and when does a unique human DNA become a person Is elective abortion murder Do demons really exist This nation is in serious conflict over the answers to these questions Dr Tom Tanner an oncologist in a Mississippi town becomes entangled in all these questions and in the mystery of a boy thought by some to be of supernatural birth Perhaps the boy is a demon

Sacred Science William H. West,2025-04-08 If you review of the impulses that created the universe directed the unfolding of life and empowered human consciousness you reach an undeniable conclusion an omnipotent Creator supervised the unfolding of our universe From the moment of creation to the emergence of a planet tailor made for life from the journey of multi million species to the development of an upright creature hungry for God science tells a sacred story a superintelligent Creator used His mathematical genius to convert lifeless equations into galaxies planets and people His love has been visible throughout the process Could our journey reflect thousands of random accidents with no divine guidance Creation delivered impulses that filled the universe with galaxies and stars Eliminate any one of those blueprints and the universe would have been stillborn Stars produced a perfect mix of elements to bring the universe to life Without a robust ensemble of gene and protein sequences life might still be living at the bottom of the sea Hundreds of human genes convert the neurons of a human infant into trillions of networks in an adult brain Without those God given genes a dangerous world may have left us trapped in the treetops with no interest in science at all But God shared His mind and triggered the emergence of human consciousness Where do we find ourselves after centuries of that scientific searching We see that science reflects its source Science is a gift of God s creative love and is nothing less than sacred **Erwin Schrödinger's**

Beyond the Brain Stanislav Grof,1985-01-01 Beyond the Brain seriously challenges the existing neurophysiological models of the brain After three decades of extensive research on those non ordinary states of consciousness induced by psychedelic drugs and by other means Grof concludes that our present scientific world view is as inadequate as many of its historical predecessors In this pioneering work he proposes a new model of the human psyche that takes account of his findings Grof includes in his model the recollective level or the reliving of emotionally relevant memories a level at which the Freudian framework can be useful Beyond that is perinatal level in which the human unconscious may be activated to a reliving of biological birth and confrontation with death How birth experience influences an individual s later development is a central focus of the book The most serious challenge to contemporary psycho analytic theory comes from a delineation of the transpersonal level or the expansion of consciousness beyond the boundaries of time and space Grof makes a bold argument that understanding of the perinatal and transpersonal levels changes much of how we view both mental illness and mental health His reinterpretation of some of the most agonizing aspects of human behavior proves thought provoking for both laypersons and professional therapists
