Thinking, Childhood, and Time Walter Omar Kohan, Barbara Weber, 2020-10-06 Thinking Childhood and Time Contemporary Perspectives on the Politics of Education is an interdisciplinary exploration of the notion of childhood and its place in a philosophical education Contributors consider children's experiences of time space embodiment and thinking By acknowledging Hannah Arendt's notion that every child brings a new beginning into the world they address the question of how educators can be more responsive to the Otherness that childhood offers while assuming that most educational models follow either a chronological model of child development or view children as human beings that are lacking The contributors explore childhood as a philosophical concept in children adults and even beyond human beings Childhood as a forgotten dimension of the world Contributors also argue that a pedagogy that does not aim for an exodus of childhood but rather responds to the arrival of a new human being responsibly dialogically fosters a deeper appreciation of the newness that children bring in order to sensitize us for our own Childhood as adults as well and allow us to welcome other forms of childhood in the world As a whole this book argues that the experience of natality such as the beginning of life is not chronologically determined but rather can occur more than once in a human life and beyond Scholars of philosophy education psychology and childhood studies will find this book particularly useful

The Unknown Genius Creative Abilities of Leonardo Da Vinci Dr. Rudy A. Magnan, 2020-10-01 This publication was written in the belief that Leonardo's study of his natural surroundings his advanced perceptual skills and his continued interest in learning all played a significant role in developing his creativity He challenged established mindsets with the conviction that all earthly things are connected He spent years observing nature's secrets documenting his observations and the creative thinking that resulted While much has been written about Leonardo's incredible scientific discoveries his futuristic inventions and his great works of art we fail to realize that Leonardo da Vinci developed incredible creative thinking that needs to be understood and applied in this new creative paradigm where creative ideas are the currency of the future

A SEARCH FOR ENLIGHTENMENT IN AN AGE OF INDOCTRINATION Dr. Rudy Magnan, 2023-12-29 Our minds are organized into a certain mind set based on our perception of the reality we develop in our socialization into society I believe that because we are living and operating a new creative paradigm filled with new ideas concepts and laws we must begin to challenge our existing mind set and seek creative concepts and methods that will allow us to see this new alternative reality that many refuse to recognize and accept We can look at nature as a composite of isolated snapshots showing its beauty or we can view the incredible and intelligent design and function behind every plant

tree and living creature The intended goal of the book is to provoke your mind to see this incredible bio design from which we can begin to develop a higher level of understanding and meaning We will soon realize that we will discover and recognize new patterns as we process new information We will begin to connect ideas and concepts previously not connected We will raise the quality of our perceptions and thinking using the intelligent design found in nature Thinking skill in unquestionably the fundamental human resource We need to do much more about developing this skill because the complexity of modern life demands more than routine reactions There is an even bigger need for productive constructive and generative thinking I hope that everyone concerned with the future direction of education will pay attention to these important matters which you raise in this book Dr Edward de Bono WORLD S LEADING AUTHORITY ON THINKING AS A DELIBERATE SKILL

Excuse Me, Life is Calling Christian Pedersen,2019-12-10 Theology and science are relatively poorly represented in today s world a world of biased facts misrepresented realities and lack of investigative

enquiry which is often prejudicial and unbalanced in reasoning Wouldn't it be nice if everyone learned to dissect information with the ability to not prejudge until all evidence is available If everyone became determined not to be led by another's self aggrandizing or nefarious intentions Excuse Me Life is Calling asks you to consider the relationship of all the world's great theologies and how these interplay with science an interplay that has struggled despite the deep linkages between the two for thousands of years The symbiotic relationship between theology and science reveals that each field of study needs the other even though science is not theology and theology is not science Think past the presented evidence and see the inclusive realities surrounding each subject realities that are often publicly presented as propaganda for a multitude of reasons Follow an historical path of evidence based misrepresentation over hundreds if not thousands of years From a discussion of various theologies to the science of creation and evolution to startling concerns about the future Excuse Me Life is Calling encourages readers development of a process of greater thought both as an individual and with others interested in similar topics The truth is out there if you're able to open your mind and look for it with diligence Individual Schools, Unique Solutions Adrian Raynor, 2013-04-15 Effective school leadership depends on developing an understanding of people organisational learning and organisational processes However each school has a unique set of circumstances Prescriptions for leadership that apply to one school may well not apply to another Individual Schools Unique Solutions turns away from the highly prescriptive management practices that often fail to provide a workable solution to specific problems in schools Adrian Raynor demonstrates that by understanding the process influencing any situation a creative solution can be achieved The book draws on systems theory and aspects of complexity theory While addressing many of the issues commonly faced by headteachers the principles described are equally important for all levels of school management and the book will be of interest to all those in management positions in schools Ultimately this book is about developing effective leadership through understanding and is a guide to thinking afresh rather than looking for another quick fix prescription
