discussed and communicated QNP 2006 is the forth edition of this biennial meeting Selected and refereed original contributions of QNP 2006 have been published in The European Physical Journal A Hadrons and Nuclei EPJ A while the present proceedings book in addition to reprinting the articles published in EPJ A further includes all other contributions selected and accepted by the organizing committee for publication and archiving

Quarks and Gluons M. Y. Han, 1999 In his new book the author introduces us to the world of particles He traces the century of progress in our search for the basic units of matter as well as those of the forces that act on it starting from the electron and photon the first entry in the list of elementary quantum particles and ending up with the quarks and gluons discovered in the last decades of this century He gives the curious layman a clear understanding of the forefront of our knowledge about the structure of matter at its deepest level Y Nambu University of Chicago This is a readable little book on particle physics and is aimed at those with no previous exposure to the subject Nevertheless as one would expect from a leading contributor to the field Han takes care to get things right even when using simple language as for example in his discussion of spin CERN Courier

Mesons and Quarks A. B. Santra, S. Kailas, R. S. Bhalerao, 2004 This monograph Mesons and Quarks includes a wide range of topics in the frontier areas of research in the overlapping field of nuclear and particle physics It discusses various aspects of Quantum Chromodynamics QCD at different regimes of energy and density BOOK JACKET

From Collective States to Quarks in Nuclei, 1981

Chiral Nuclear Dynamics II: From Quarks To Nuclei To Compact Stars (2nd Edition) Mannque Rho, 2008-06-09 This is the sequel to the first volume to treat in one effective field theory framework the physics of strongly interacting matter under extreme conditions This is vital for understanding the high temperature phenomena taking place in relativistic heavy ion collisions and in the early Universe as well as the high density matter predicted to be present in compact stars The underlying thesis is that what governs hadronic properties in a heat bath and or a dense medium is hidden local symmetry which emerges from chiral dynamics of light quark systems and from the duality between QCD in 4D and bulk gravity in 5D as in AdS QCD Special attention is paid to hot matter relevant for relativistic heavy ion processes and to dense matter relevant for compact stars that are either stable or on the verge of collapse into black holes

Particles and Nuclei Bogdan Povh, Klaus Rith, Christoph Scholz, Frank Zetsche, 2008-10-10 To cope with modern developments especially in nuclear physics research this textbook presents nuclear and particle physics from a unifying point of view The first part Analysis is devoted to disentangling the substructure of matter The second part Synthesis shows how the elementary particles may be combined to build hadrons and nuclei A section on neutrino oscillations and one on nuclear matter at high temperatures bridge the field of nuclear and particle physics and modern astrophysics and cosmology New developments are also covered This concise text has become a standard reference for advanced and undergraduate courses

New Vistas in Electro-Nuclear Physics Edward L. Tomusiak, Henry S. Caplan, Edward T. Dressler, 2013-11-11 The NATO Advanced Study Institute New Vistas in Electro Nuclear Physics was held in Banff Alberta Canada from August 22 to September 4 1985 This

volume contains the lecture notes from that Institute. The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan's Linear Accelerator Laboratory. This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines. In particular that physics which requires high energy and/or high duty cycle accelerators for its extraction was intended to be the focus of the Institute. Thus the scope of the lectures was wide with topics ranging from the structure of the trinucleons to quark models of nucleons, QCD and QHD. The theme however was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest.

Exotic Nuclei: Exon-2016 - Proceedings Of The International Symposium Yuri Erastovich Penionzhkevich, Yuri G Sobolev, 2017-06-28. The symposium was held at Kazan, Russia from 4-10 September 2016. EXON 2016 was dedicated to the problems of producing and investigating nuclei far from the line of stability. The main goal of the symposium was to discuss the latest results on the production and study of the properties of the lightest to the heaviest nuclei as well as the plans for future joint investigations in the field of exotic nuclei. The talks were presented by leading scientists in the field. Among the topics of the symposium were the following: production and study of properties of nuclei in extreme states, strongly deformed nuclei, highly excited nuclei far from the line of stability as well as nuclei having large angular momenta. New results of the investigations are presented in this book. In particular the latest results on the synthesis of new superheavy elements are also presented. There were also talks devoted to existing detecting devices and accelerators of exotic nuclei as well as to the future projects for the creation of similar set-ups.
