**Control of Spatially Structured Random Processes and Random Fields with Applications** Ruslan K. Chornei, Hans Daduna, Pavel S. Knopov, 2006-09-03 This book is devoted to the study and optimization of spatiotemporal stochastic processes These are processes that simultaneously develop in space and time under random influences Such processes occur almost everywhere when the global behavior of complex systems is studied e.g. in physical and technical systems population

dynamics neural networks computer and telecommunication networks complex production networks and flexible manufacturing systems logistic networks and transportation systems environmental engineering climate modeling and prediction earth surface models and so on In the study of spatiotemporal stochastic processes the classical concepts of random fields which are models for spatially distributed random phenomena and of stochastic processes which are usually thought to describe the evolution over time of systems under random influences converge Over the last twenty years many research monographs were written with emphasis on this unifying point of view as were a huge number of articles and papers on this subject
