Rapid Thermal and Integrated Processing V: Volume 429 J. C. Gelpey, 1996-10-14 This book is the latest in a continuing series on rapid thermal processing and related topics It embraces a diversity of research development and manufacturing activities that require rapid thermal and integrated processing techniques which are recognized by their acronyms such as rapid thermal annealing RTA rapid thermal processing RTP rapid thermal chemical vapor deposition RTCVP rapid thermal oxidation RTO and others This fifth anniversary volume reports notable advances in the use of rapid thermal techniques in processing science and technology and for process control in industrial fabrication facilities It is organized around progress obtained through evaluation methodology equipment and process modelling temperature control defects and diffusion associated with annealing metallizations such as silicidation novel processing of sol gel and magnetic films dielectric growth and deposition and silicon or silicon germanium film deposition

Rapid Thermal Processing A. Slaoui, T. Theiler, J.C. Muller, R.K. Singh, 1999-03-17 Rapid Thermal Processing RTP is a well established single wafer technology in VLSI semiconductor manufacturing and electrical engineering as well as in materials science The biggest advantage of RTP is that it eliminates the long ramp up and ramp down times associated with furnaces enabling a significant reduction in the thermal budget Today RTP is in production use for source drain implant annealing contact alloying formation of refractory nitrides and silicides and thin gate dielectric oxide formation The aim of Symposium I was to provide an overview of the latest information on research and development in the different topics cited above The potential applications of RTP in new areas like large area devices such as flat panel displays and solar cells has to be investigated About 30 papers were presented in this symposium The contributions of most interest involved modelling and control junctions formation and thermal oxidation deposition and recrystallisation and silicide formations However the range of topics and the intent to focus on underlying fundamental issues like dopant diffusion in silicon from solid sources strain relaxation and photonic effects nucleation as well
