Raptor And The Lamb Predators And Prey In The Living World:

The Raptor and the Lamb Christopher McGowan, 1998 The author describes the great variety of predator prey relationships that shape the natural world from mammals reptiles plants and micro organisms to the fossilized records of dinosaurs

Raptor and the Lamb Christopher McGowan, 2001-05 Provides a guided tour of predator prey relationships through the very different but often overlapping worlds of mammals birds fish reptiles plants insects and microorganisms as well as the fossilized record of the dinosaurs We learn in every instance not only the intricacies of interdependence in the vast chain of being but also the astonishing adaptability that is inherent in nature whether the drama be played out on the African plains in the depths of the ocean or in the familiar confines of our own backyard The author is Curator of Vertebrate Paleontology at the Royal Ontario Museum in Toronto and professor of zoology at the University of Toronto Illustrated

The Human Predicament David Benatar, 2017-05-05 Are our lives meaningful or meaningless Is our inevitable death a bad thing Would immortality be an improvement Would it be better all things considered to hasten our deaths by suicide Many people ask these big questions and some people are plagued by them Surprisingly analytic philosophers have said relatively little about these important questions about the meaning of life When they have tackled the big questions they have tended like popular writers to offer comforting optimistic answers The Human Predicament invites readers to take a clear eyed and unfettered view of the human condition David Benatar here offers a substantial but not unmitigated pessimism about the central questions of human existence He argues that while our lives can have some meaning we are ultimately the insignificant beings that we fear we might be He maintains that the quality of life although less bad for some than for others leaves much to be desired in even the best cases Worse death is generally not a solution in fact it exacerbates rather than mitigates our cosmic meaninglessness While it can release us from suffering it imposes another cost annihilation This state of affairs has nuanced implications for how we should think about many things including immortality and suicide and how we should think about the possibility of deeper meaning in our lives Ultimately this thoughtful provocative and deeply candid treatment of life's big questions will interest anyone who has contemplated why we are here and what the answer means for how we should live

Adaptations in the Animal Kingdom Verne A. Simon, 2010-03-11 Chapter 1 Temperature Regulation in Animals There are broadly speaking two kinds of animals with regard to body temperature exothermic cold blooded and endothermic warm blooded animals The exothermic animals such as reptiles do not supply body heat by metabolic conversion of food to heat Reptiles allow their surroundings to determine their body temperature They lie out in the sun to warm their body If they are too hot they seek the shade or even burrow into the ground At night they hide from the cold in burrows or squeeze into cracks between rocks or hide in leaf cover Reptiles avoid the extremes of temperature When reptiles become cool their movements slow down and chemical processes in their bodies such as digestion are inhibited Predators such as hawks and eagles find it easier to prey on lizards and snakes in cooler weather The distribution of reptiles is somewhat

limited by their exothermic character They do not thrive in cold climates¹ What are the advantages and disadvantages in being exothermic When the lizard is in a cool environment and cannot find a warmer spot its body simply cools to the temperature of the surroundings It is not necessary for the exothermic lizard to generate heat to increase its body temperature This means that the lizard uses less energy and does not have to eat as much As the lizard cools its digestion breathing rate and heart rate slow saving energy A disadvantage occurs when the cool lizard is attacked by a predator If warm he could run fast and have a much better chance of 1 St Patrick did not chase the snakes out of Ireland Ireland was already completely free of snakes St Patrick was instrumental in converting pagans to Christianity Since the snake was a symbol used in pagan rituals St Patrick was influential in ridding Ireland of the ritual use of symbolic snakes 10 Verne A Simon evading capture A warm lizard being chased by a predator can move quite fast for a short distance but like other exotherms lacks endurance and soon tires When the exotherm is running fast its effort is anaerobic that is is not using oxygen and lactic acid is building up in its body It soon tires and is unable to exert itself It must recover by taking in oxygen to rid the body of lactic acid Another disadvantage of exothermic life is that cold climates are not available as habitat If there is a sudden climate change an exothermic animal wouldn't be able to mount the sustained effort needed to migrate to a better environment The exothermic creature might simply perish About 180 million years ago mammals appeared Mammals are endothermic warm blooded and are able to maintain a nearly constant body temperature regardless of the temperature of their surroundings within wide limits Their bodies will not tolerate too high or too low a temperature If the surroundings are too hot or cold causing the body temperature to exceed allowed limits the animal will die Mammals have furry coats to help them tolerate low temperatures Sea dwelling mammals whales seals and walrus have thick layers of blubber for insulation Birds are endothermic and have feathers to protect them from the cold Many types of birds and mammals survive in cold climates Emperor penguins even live in the Antarctic in the coldest climate on earth Under normal circumstances mammals and birds manage to keep this very nearly constant body temperature regardless of the temperature of their surroundings Mammals are characterized by having body hair and suckling their young This latter behavior gives the class its name mammals must have mammary glands A second advantage is that endothermic animals are not limited to activity only in daylight hours In many local

Monster of God: The Man-Eating Predator in the Jungles of History and the Mind David Quammen, 2004-09-17 Rich detail and vivid anecdotes of adventure A treasure trove of exotic fact and hard thinking New York Times Book Review For millennia lions tigers and their man eating kin have kept our dark scary forests dark and scary and their predatory majesty has been the stuff of folklore But by the year 2150 big predators may only exist on the other side of glass barriers and chain link fences Their gradual disappearance is changing the very nature of our existence We no longer occupy an intermediate position on the food chain instead we survey it invulnerably from above so far above that we are in danger of forgetting that we even belong to an ecosystem Casting his expert eye over the rapidly diminishing areas of wilderness where predators still reign the award winning author of *The Song of the Dodo* and *The Tangled Tree* examines the fate of lions in India s Gir forest of saltwater crocodiles in northern Australia of brown bears in the mountains of Romania and of Siberian tigers in the Russian Far East In the poignant and troublesome ferocity of these embattled creatures we recognize something primeval deep within us something in danger of vanishing forever *Extreme Encounters* Greg Emmanuel, 2002-09-13 Brace yourself If you re the squeamish type turn back now If you re afraid of a little

Relations. Beyond Anthropocentrism. Vol. 3, No. 1 (2015). Wild Animal Suffering and Intervention in Nature: Part II AA. VV., 2016-04-19T16:40:00+02:00 Relations Beyond Anthropocentrism is a peer refereed journal of trans anthropocentric ethics and related inquiries The main aim of the journal is to create a professional interdisciplinary forum in Europe to discuss moral and scientific issues that concern the increasing need of going beyond narrow anthropocentric paradigms in all fields of knowledge The journal accepts submissions on all topics which promote European research adopting a non anthropocentric ethical perspective on both interspecific and intraspecific relationships between all life species humans included and between these and the abiotic environment Rail, Steam, and Speed Christopher McGowan, 2004-11-10 From October 6 through 14 1829 in a small village just outside Liverpool England ten thousand spectators gathered to witness one of the most remarkable events of the Industrial Age a battle among locomotives that became known as the Rainhill Trials Five machines were entered in the competition the horse powered Cycloped attained a top speed of only five miles per hour while Perseverance which looked like a giant iron bottle standing upright atop four wagon wheels creaked along at a walking pace But the three way race between Robert Stephenson's Rocket Timothy Harworth's Sans Pareil and the crowd favorite John Braithwaite and John Ericson's Novelty astonished the gathered crowds The unfamiliar clank of machinery huge billows of steam and unprecedented speeds of thirty miles per hour thrilled the crowds during the trials carnival like atmosphere The Rocket won the competition though it had been claimed that the machine was not the superior locomotive Rail Steam and Speed explains why and offers an absorbing account of the trials people and science that gave birth to steam locomotion The purpose of the trials had been to find a locomotive that could maintain a speed of ten miles per hour for a round trip totaling thirty five miles the distance separating Liverpool and Manchester which were soon to be linked by the world's first passenger railway But what was achieved during those nine days became a benchmark of the Industrial Revolution Bringing the excitement of this great drama to life Christopher McGowan introduces us to such pioneers as George Stephenson who started as a colliery boy and finished as the father of the railways John Ericsson a Swedish Army officer who invented a new kind of locomotive in England but spent most of his life in the United States where he built the Monitor for the Union Navy and Richard Trevithick whose eleven year adventure

in South America included winning and losing several fortunes deserting Bolivar's army and escaping the jaws of a crocodile He encountered George Stephenson's son Robert in a Colombian hotel in one of the most bizarre meetings of the age But the real stars are the locomotives themselves McGowan shows how locomotives work and how they were developed from the gargantuan beam engines condensing low pressure steam inside enormous cylinders to the small high pressure driven engines of the maverick miner Trevithick He adapted the engines to power road carriages but atrocious roads led him to build an engine that could run on rails And so was born the world's first steam locomotive and modern transportation

Wilderness, Morality, and Value Joshua Duclos, 2022-08-12 What if wilderness is bad for wildlife This question motivates the philosophical investigation in *Wilderness Morality and Value* Environmentalists aim to protect wilderness and for good reasons but wilderness entails unremitting incalculable suffering for its non human inhabitants Given that it will become increasingly possible to augment nature in ways that ameliorates some of this suffering the morality of wilderness preservation is itself in question Joshua S Duclos argues that the technological and ethical reality of the Anthropocene warrants a fundamental reassessment of the value of wilderness After exposing the moral ambiguity of wilderness preservation he explores the value of wilderness itself by engaging with anthropocentrism and nonanthropocentrism sentientism biocentrism and ecocentrism and instrumental value and intrinsic value Duclos argues that the value of wilderness is a narrow form of anthropocentric intrinsic value one with a religious spiritual dimension By integrating scholarship from bioethics on the norms of engineering human nature with debates in environmental ethics concerning the prospect of engineering non human nature *Wilderness Morality and Value* sets the stage for wilderness ethics or wilderness faith in the Anthropocene

Ethical and Political Approaches to Nonhuman Animal Issues Andrew Woodhall, Gabriel Garmendia da Trindade, 2017-08-28 This book offers ethical and political approaches to issues that nonhuman animals face The recent political turn in interspecies ethics from ethical to political approaches has arisen due to the apparent lack of success of the nonhuman animal movement and dissatisfaction with traditional approaches Current works largely present general positions rather than address specific issues and principally rely on mainstream approaches This book offers alternative positions such as cosmopolitan libertarian and left humanist thought as well as applying ethical and political thought to specific issues such as experimentation factory farming nonhuman political agency and intervention Presenting work by theorists and activists insights are offered from both ethics and politics that impact theory and practice and offer essential considerations for those engaging in interspecies ethics within the political turn era

On the Prowl Mark Hallett, John M. Harris, 2020-06-02 Big cats such as lions tigers leopards and jaguars fascinate us like few other creatures They are enduring symbols of natural majesty and power Yet despite the magnetic appeal of the big cats their origins and evolutionary history remain poorly understood and human activity threatens to put an end to the big cats' glory *On the Prowl* is a fully illustrated and approachable guide to the evolution of the big cats and what it portends for their conservation today

Mark Hallett and John M Harris trace the origins of these iconic carnivores venturing down the evolutionary pathways that produced the diversity of big cat species that have walked the earth They place the evolution and paleobiology of these species in the context of ancient ecosystems and climates explaining what made big cats such efficient predators and analyzing their competition with other animals Hallett and Harris pay close attention to human impact from the evidence of cave paintings and analysis of ancient extinctions up to present day crises Their engaging and carefully documented account is brought to life through Hallett s detailed vivid illustrations based on the most recent research by leading paleontologists Offering a fresh look at the rise of these majestic animals On the Prowl also makes a powerful case for renewed efforts to protect big cats and their habitats before it is too late

Beasts Jeffrey Moussaieff Masson,2014-03-13 Orcas or killer whales are one of the planet s supreme predators Alongside humans they have the most complex brains to be found in nature But while one of these two species has killed 200 million members of its own kind in the twentieth century alone the other has killed none This is where Jeffrey Masson s fascinating new book begins there is something different about humans Masson has shown us that animals can teach us much about our own emotions about love dogs contentment cats and grief elephants But they have much to teach us about the negative emotions such as anger and aggression as well and in unexpected ways In Beasts he demonstrates that the violence we perceive in the wild is mostly a matter of projection We link the basest human behaviour to animals to beasts and claim the high ground for our species We are least human we think when we succumb to our primitive animal instincts In fact nothing could be further from the truth Animal predators kill to survive but there is nothing in the annals of animal aggression remotely equivalent to the violence mankind has inflicted upon itself Humans and humans in our modern industrialised world in particular are the most violent species in existence We lack what all other animals have a check on aggression that serves the species rather than destroys it And it is here that animals have something vitally important to teach us about ourselves

Why Elephants Have Big Ears Chris Lavers,2002-11-16 Why Elephants Have Big Ears is the result of one man s lifelong quest to understand why the creatures of the earth appear and act as they do In a wry manner and personal tone Chris Lavers explores and solves some of nature s most challenging evolutionary mysteries such as why birds are small and plentiful why rivers and lakes are dominated by the few remaining large reptiles why most of the large land dwellers are mammals and many more
