

The symbolic interaction perspective, also called symbolic interactionism, is a major framework of sociological theory. This perspective relies on the symbolic meaning that people develop and rely upon in the process of social interaction. Although symbolic interactionism traces its origins to [Max Weber's](#) assertion that individuals act according to their interpretation of the meaning of their world, the American philosopher [George Herbert Mead](#) introduced this perspective to American sociology in the 1920s.

Symbolic interaction theory analyzes society by addressing the subjective meanings that people impose on objects, events, and behaviors. Subjective meanings are given primacy because it is believed that people behave based on what they believe and not just on what is objectively true. Thus, society is thought to be socially constructed through human interpretation. People interpret one another's behavior and it is these interpretations that form the social bond.

These interpretations are called the ["definition of the situation."](#)

For example, why would young people smoke cigarettes even when all objective medical evidence points to the dangers of doing so? The answer is in the definition of the situation that people create. Studies find that teenagers are well informed about the risks of tobacco, but they also think that smoking is cool, that they themselves will be safe from harm, and that smoking projects a positive image to their peers. So, the symbolic meaning of smoking overrides that actual facts regarding smoking and risk.

Some fundamental aspects of our social experience and identities, like [race](#) and [gender](#), can be understood through the symbolic interactionist lens. Having no biological bases at all, both race and gender are social constructs that function based on *what we believe to be true* about people, given what they look like. We use socially constructed meanings of race and gender to help us decide who to interact with, how to do so, and to help us determine, sometimes inaccurately, the meaning of a person's words or actions.

One shocking example of how this theoretical concept plays out within the social construct of race is manifested in the fact that many people, regardless of race, [believe](#)

**Social Psychology** Karen A.

Hegtvedt, Cathryn Johnson, 2017-07-12. *Social Psychology: Individuals, Interaction, and Inequality* invites you to take a sociological approach to the study of the individual in relationship to society. This unique new text explains how social psychology provides varied yet interrelated explanations for individuals' experiences in groups and how the micro-level interactions of individuals have consequences for macro-level phenomena within society. Karen A. Hegtvedt and Cathryn Johnson describe an array of processes that shape interaction, given differences in status, power, or group memberships. Unlike other social psychology texts, theirs stresses the interconnections among these processes to create a story about how individuals perceive and then act in their social worlds. In addition to introducing the central theoretical approaches and important empirical studies, the authors also provide many examples that help students locate the substance of social psychology in their own experiences and social interactions. In the end, readers will gain an understanding of how their identities and perceptions shape what they do, how the structures in which they are embedded may constrain or facilitate their behaviors, and how these dynamics contribute to reinforcing or ameliorating inequalities in their social groups.
